**Cameco Signs Agreement Adding Uranium Conversion Capacity**

Saskatoon, Saskatchewan, Canada, March 16, 2005 . . . . .

**Cameco Corporation** announced today that it has signed a toll-conversion agreement with British Nuclear Fuels plc (BNFL) to acquire uranium conversion services (UF<sub>6</sub>) from BNFL's Springfields plant in Lancashire, United Kingdom. Under the 10-year agreement, BNFL will annually convert a base quantity of 5 million kilograms of uranium (kgU) as UO<sub>3</sub> to UF<sub>6</sub> for Cameco.

In 2001, BNFL announced that the Springfields facility would close in 2006. This new agreement will keep the plant operating for the duration of the agreement.

Cameco currently refines uranium concentrates to UO<sub>3</sub> at the Blind River refinery and ships this material to the Port Hope conversion facility. Both facilities are located in Ontario. Under the agreement with BNFL, Cameco will also ship UO<sub>3</sub> from its Blind River refinery to BNFL's conversion plant where it will be toll converted to UF<sub>6</sub>. Cameco will then deliver the UF<sub>6</sub> to its utility customers who ultimately use it for fuel in nuclear reactors after further processing. Cameco currently has more than a quarter of the western world's UF<sub>6</sub> conversion capacity from its Port Hope plant.

Cameco will invest about \$6 million to expand production and drum-filling facilities at its Blind River refinery and \$4 million to construct drum tipping and washing facilities at BNFL's Springfields plant. UO<sub>3</sub> shipments from Blind River are expected to begin later this year with UF<sub>6</sub> conversion shipments from BNFL starting in mid-2006. Cameco expects this agreement will be accretive to operating cash flow and earnings beginning in 2006.

This agreement allows us to effectively achieve a significant increase in UF<sub>6</sub> production capacity, sales and market share by investing a small amount of capital, said Jerry Grandey, Cameco's president and CEO. At the same time, it preserves Springfields' production capacity at a critical time in the industry and enables us to lower our unit costs by utilizing Blind River's unused capacity.

Historically, the Blind River refinery has not operated anywhere near full capacity since it has been limited by the capacity of Cameco's conversion facility at Port Hope which receives essentially all of Blind River's UO<sub>3</sub> production.

Cameco has already secured long-term commitments for a significant volume of contracts for conversion services with utility customers to baseload this new agreement.

- 2 -

Today Cameco has taken another step toward its vision to be a dominant nuclear energy company producing uranium fuel and generating clean electricity, Grandey said.

BNFL is an international nuclear energy company based in the United Kingdom. In April 2005, ownership of the Springfields plant is scheduled to be transferred to Britain's Nuclear Decommissioning Authority (NDA), a government agency established to take responsibility for the majority of the United Kingdom's civil nuclear assets and liabilities.

Cameco, with its head office in Saskatoon, Saskatchewan, is the world's largest uranium producer. The company's uranium products are used to generate electricity in nuclear energy plants around the world, providing one of the cleanest sources of energy available today. Cameco's shares trade on the Toronto and New York stock exchanges.

Statements contained in this news release which are not historical facts are forward-looking statements that involve risks, uncertainties and other factors that could cause actual results to differ materially from those expressed or implied by such forward-looking statements. Factors that could cause such differences, without limiting the generality of the following, include: volatility and sensitivity to market prices for uranium, electricity in Ontario and gold; the impact of the sales volume of uranium, conversion services, electricity generated and gold; competition; the impact of change in foreign currency exchange rates and interest rates; imprecision in reserve estimates; environmental and safety risks including increased regulatory burdens; unexpected geological or hydrological conditions; political risks arising from operating in certain developing countries; a possible deterioration in political support for nuclear energy; changes in government regulations and policies, including trade laws and policies; demand for nuclear power; replacement of production and failure to obtain necessary permits and approvals from government authorities; legislative and regulatory initiatives regarding deregulation, regulation or restructuring of the electric utility industry in Ontario; Ontario electricity rate regulations; weather and other natural phenomena; ability to maintain and further improve positive labour relations; operating performance of the facilities; success of planned development projects; and other development and operating risks.

Although Cameco believes that the assumptions inherent in the forward-looking statements are reasonable, undue reliance should not be placed on these statements, which only apply as of the date of this report. Cameco disclaims any intention or obligation to update or revise any forward-looking statement, whether as a result of new information, future events or otherwise.

Additional information on this agreement is available in a backgrounder that is posted on Cameco's Web site at [www.cameco.com](http://www.cameco.com).
