Registration No. 333-202840

The information in this preliminary pricing supplement is not complete and may be changed. This preliminary pricing supplement and the accompanying prospectus supplement and prospectus are not an offer to sell these securities and we are not soliciting an offer to buy these securities in any jurisdiction where the offer or sale is not permitted.

Subject To Completion, dated December 1, 2017

PRICING SUPPLEMENT No. 971 dated December , 2017

(To Prospectus Supplement dated March 18, 2015

and Prospectus dated March 18, 2015)

Wells Fargo & Company

Medium-Term Notes, Series K

Equity Linked Securities

Market Linked Securities Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the

Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Linked to the **lowest performing** of the common stock of Lowe's Companies, Inc., the common stock of Intel Corporation, the common stock of Delta Air Lines, Inc. and the common stock of JPMorgan Chase & Co. (each referred to as an "Underlying Stock")

Unlike ordinary debt securities, the securities do not provide for fixed payments of interest, do not repay a fixed amount of principal at stated maturity and are subject to potential automatic call prior to stated maturity upon the terms described below. Whether the securities pay a contingent coupon, whether the securities are automatically called prior to stated maturity and, if they are not automatically called, whether you are repaid the original offering price of your securities at stated maturity will depend in each case on the stock closing price of the lowest performing Underlying Stock on the relevant calculation day or call date, as applicable. The lowest performing Underlying Stock on any calculation day (including the call dates) is the Underlying Stock that has the lowest stock closing price on that calculation day as a percentage of its starting price

Contingent Coupon. The securities will pay a contingent coupon on a monthly basis until the earlier of stated maturity or automatic call if, **and only if**, the stock closing price of the lowest performing Underlying Stock on the calculation day for that month is greater than or equal to its downside threshold price. However, if the stock closing price of the lowest performing Underlying Stock on a calculation day is less than its downside threshold price, you will not receive any contingent coupon for the relevant month. If the stock closing price of the lowest performing Underlying Stock is less than its downside threshold price on every calculation day, you will not

receive any contingent coupons throughout the entire term of the securities. The contingent coupon rate will be determined on the pricing date and will be within the range of 12.20% to 13.20% per annum

Automatic Call. If the stock closing price of the lowest performing Underlying Stock on any of the quarterly call dates from June 2018 to September 2020, inclusive, is greater than or equal to its call threshold price, we will automatically call the securities for the original offering price plus a final contingent coupon payment. The call dates are the same dates as the calculation days occurring in March, June, September and December from June 2018 to September 2020, inclusive. The call threshold price for each Underlying Stock is equal to 95% of its starting price

Potential Loss of Principal. If the securities are not automatically called prior to stated maturity, you will receive the original offering price at stated maturity if, **and only if**, the stock closing price of the lowest performing Underlying Stock on the final calculation day is greater than or equal to its downside threshold price. If the stock closing price of the lowest performing Underlying Stock on the final calculation day is less than its downside threshold price, you will lose more than 40%, and possibly all, of the original offering price of your securities. The downside threshold price for each Underlying Stock is equal to 60% of its starting price

If the securities are not automatically called prior to stated maturity, you will have full downside exposure to the lowest performing Underlying Stock from its starting price if its stock closing price on the final calculation day is less than its downside threshold price, but you will not participate in any appreciation of any Underlying Stock and will not receive any dividends paid on any Underlying Stock

Your return on the securities will depend **solely** on the performance of the Underlying Stock that is the lowest performing Underlying Stock on each calculation day. You will not benefit in any way from the performance of the better performing Underlying Stocks. Therefore, you will be adversely affected if **any Underlying Stock** performs poorly, even if the other Underlying Stocks perform favorably

All payments on the securities are subject to the credit risk of Wells Fargo & Company, and you will have no ability to pursue any Underlying Stock for payment; if Wells Fargo & Company defaults on its obligations, you could lose some or all of your investment

No exchange listing; designed to be held to maturity

On the date of this preliminary pricing supplement, the estimated value of the securities is approximately \$937.69 per security. While the estimated value of the securities on the pricing date may differ from the estimated value set forth above, we do not expect it to differ significantly absent a material change in market conditions or other relevant factors. In no event will the estimated value of the securities on the pricing date be less than \$922.69 per security. The estimated value of the securities was determined for us by Wells Fargo Securities, LLC using its proprietary pricing models. It is not an indication of actual profit to us or to Wells Fargo Securities, LLC or any of our other affiliates, nor is it an indication of the price, if any, at which Wells Fargo Securities, LLC or any other person may be willing to buy the securities from you at any time after issuance. See Investment Description in this pricing supplement.

The securities have complex features and investing in the securities involves risks not associated with an investment in conventional debt securities. See Risk Factors herein on page PRS-12.

The securities are unsecured obligations of Wells Fargo & Company and all payments on the securities are subject to the credit risk of Wells Fargo & Company. The securities are not deposits or other obligations of a depository institution and are not insured by the Federal Deposit Insurance Corporation, the Deposit Insurance Fund or any other governmental agency of the United States or any other jurisdiction.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined if this pricing supplement or the accompanying prospectus supplement and prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

Wells Fargo Securities

Market Linked Securities Auto-Callable with Contingent Coupon and

Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Investment Description

The Principal at Risk Securities Linked to the Lowest Performing of the common stock of Lowe's Companies, Inc., the common stock of Intel Corporation, the common stock of Delta Air Lines, Inc. and the common stock of JPMorgan Chase & Co. due December 24, 2020 are senior unsecured debt securities of Wells Fargo & Company (Wells Fargo) that do not provide for fixed payments of interest, do not repay a fixed amount of principal at stated maturity and are subject to potential automatic call upon the terms described in this pricing supplement. Whether the securities pay a monthly contingent coupon, whether the securities are automatically called prior to stated maturity and, if they are not automatically called, whether you are repaid the original offering price of your securities at stated maturity will depend in each case upon the stock closing price of the **lowest performing** of the common stock of Lowe's Companies, Inc., the common stock of Intel Corporation, the common stock of Delta Air Lines, Inc. and the common stock of JPMorgan Chase & Co. (each referred to as an Underlying Stock) on the relevant calculation day or call date, as applicable. The lowest performing Underlying Stock on any calculation day (including the call dates) is the Underlying Stock that has the lowest stock closing price on that calculation day as a percentage of its starting price. The securities provide:

- (i) monthly contingent coupon payments at a rate of 12.20% to 13.20% per annum (to be determined on the pricing date) until the earlier of stated maturity or automatic call if, **and only if**, the stock closing price of the lowest performing Underlying Stock on the applicable monthly calculation day is greater than or equal to 60% of its starting price;
- (ii) the possibility of an automatic early call of the securities for an amount equal to the original offering price plus a final contingent coupon payment if the stock closing price of the lowest performing Underlying Stock on any of the quarterly call dates from June 2018 to September 2020, inclusive, is greater than or equal to its call threshold price; and
- (iii) if the securities are not automatically called prior to stated maturity:
 - (a) repayment of the original offering price if, **and only if**, the stock closing price of the lowest performing Underlying Stock on the final calculation day has not declined by more than 40% from its starting price; and
 - (b)

full exposure to the decline in the price of the lowest performing Underlying Stock on the final calculation day from its starting price if the lowest performing Underlying Stock has declined by more than 40% from its starting price.

If the stock closing price of the lowest performing Underlying Stock on any monthly calculation day is less than 60% of its starting price, you will not receive any contingent coupon payment for that month. If the securities are not automatically called prior to stated maturity and the stock closing price of the lowest performing Underlying Stock on the final calculation day has declined by more than 40% from its starting price, you will lose more than 40%, and possibly all, of the original offering price of your securities at stated maturity. Accordingly, you will not receive any protection if the stock closing price of the lowest performing Underlying Stock on the final calculation day has declined by more than 40% from its starting price.

Any return on the securities will be limited to the sum of your contingent coupon payments, if any. You will not participate in any appreciation of any Underlying Stock, but you will be fully exposed to the decline in the lowest performing Underlying Stock on the final calculation day if the securities are not automatically called prior to stated maturity and the stock closing price of the lowest performing Underlying Stock on the final calculation day has declined by more than 40% from its starting price.

All payments on the securities are subject to the credit risk of Wells Fargo.

Your return on the securities will depend solely on the performance of the Underlying Stock that is the lowest performing Underlying Stock on each calculation day. You will not benefit in any way from the performance of the better performing Underlying Stocks. Therefore, you will be adversely affected if any Underlying Stock performs poorly, even if the other Underlying Stocks perform favorably.

The securities are riskier than alternative investments linked to only one of the Underlying Stocks or linked to a basket composed of each Underlying Stock. Unlike those alternative investments, the securities will be subject to the full risks of each Underlying Stock, with no offsetting benefit from the better performing Underlying Stocks. The securities are designed for investors who understand and are willing to bear this additional risk in exchange for the potential contingent coupon payments that the securities offer. Because the securities may be adversely affected by poor performance by any Underlying Stock, you should not invest in the securities unless you understand and are willing to accept the full downside risks of each Underlying Stock.

Market Linked Securities Auto-Callable with Contingent Coupon and

Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Investment Description (Continued)

You should read this pricing supplement together with the prospectus supplement dated March 18, 2015 and the prospectus dated March 18, 2015 for additional information about the securities. Information included in this pricing supplement supersedes information in the prospectus supplement and prospectus to the extent it is different from that information. Certain defined terms used but not defined herein have the meanings set forth in the prospectus supplement.

You may access the prospectus supplement and prospectus on the SEC website www.sec.gov as follows (or if such address has changed, by reviewing our filing for the relevant date on the SEC website):

Prospectus Supplement dated March 18, 2015 and Prospectus dated March 18, 2015 filed with the SEC on March 18, 2015:

<http://www.sec.gov/Archives/edgar/data/72971/000119312515096449/d890684d424b2.htm>

The original offering price of each security of \$1,000 includes certain costs that are borne by you. Because of these costs, the estimated value of the securities on the pricing date will be less than the original offering price. The costs included in the original offering price relate to selling, structuring, hedging and issuing the securities, as well as to our funding considerations for debt of this type.

The costs related to selling, structuring, hedging and issuing the securities include (i) the agent discount, (ii) the projected profit that our hedge counterparty (which may be one of our affiliates) expects to realize for assuming risks inherent in hedging our obligations under the securities and (iii) hedging and other costs relating to the offering of the securities.

Our funding considerations take into account the higher issuance, operational and ongoing management costs of market-linked debt such as the securities as compared to our conventional debt of the same maturity, as well as our liquidity needs and preferences. Our funding considerations are reflected in the fact that we determine the economic terms of the securities based on an assumed funding rate that is generally lower than the interest rates implied by secondary market prices for our debt obligations and/or by other traded instruments referencing our debt obligations, which we refer to as our secondary market rates. As discussed below, our secondary market rates are used in determining the estimated value of the securities.

If the costs relating to selling, structuring, hedging and issuing the securities were lower, or if the assumed funding rate we use to determine the economic terms of the securities were higher, the economic terms of the securities would be more favorable to you and the estimated value would be higher. The estimated value of the securities as of the

pricing date will be set forth in the final pricing supplement.

Determining the estimated value

Our affiliate, Wells Fargo Securities, LLC (WFS), calculated the estimated value of the securities set forth on the cover page of this pricing supplement based on its proprietary pricing models. Based on these pricing models and related market inputs and assumptions referred to in this section below, WFS determined an estimated value for the securities by estimating the value of the combination of hypothetical financial instruments that would replicate the payout on the securities, which combination consists of a non-interest bearing, fixed-income bond (the debt component) and one or more derivative instruments underlying the economic terms of the securities (the derivative component).

The estimated value of the debt component is based on a reference interest rate, determined by WFS as of a recent date, that generally tracks our secondary market rates. Because WFS does not continuously calculate our reference interest rate, the reference interest rate used in the calculation of the estimated value of the debt component may be higher or lower than our secondary market rates at the time of that calculation. As noted above, we determine the economic terms of the securities based upon an assumed funding rate that is generally lower than our secondary market rates. In contrast, in determining the estimated value of the securities, we value the debt component using a reference interest rate that generally tracks our secondary market rates. Because the reference interest rate is generally higher than the assumed funding rate, using the reference interest rate to value the debt component generally results in a lower estimated value for the debt component, which we believe more closely approximates a market valuation of the debt component than if we had used the assumed funding rate.

WFS calculated the estimated value of the derivative component based on a proprietary derivative-pricing model, which generated a theoretical price for the derivative instruments that constitute the derivative component based on various inputs, including the derivative component factors identified in Risk Factors The Value Of The Securities Prior To Stated Maturity Will Be Affected By Numerous Factors, Some Of Which Are Related In Complex Ways. These inputs may be market-observable or may be based on assumptions made by WFS in its discretion.

Market Linked Securities Auto-Callable with Contingent Coupon and

Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's

Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines,

Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Investment Description (Continued)

The estimated value of the securities determined by WFS is subject to important limitations. See Risk Factors The Estimated Value Of The Securities Is Determined By Our Affiliate's Pricing Models, Which May Differ From Those Of Other Dealers and Our Economic Interests And Those Of Any Dealer Participating In The Offering Are Potentially Adverse To Your Interests.

Valuation of the securities after issuance

The estimated value of the securities is not an indication of the price, if any, at which WFS or any other person may be willing to buy the securities from you in the secondary market. The price, if any, at which WFS or any of its affiliates may purchase the securities in the secondary market will be based upon WFS's proprietary pricing models and will fluctuate over the term of the securities due to changes in market conditions and other relevant factors. However, absent changes in these market conditions and other relevant factors, except as otherwise described in the following paragraph, any secondary market price will be lower than the estimated value on the pricing date because the secondary market price will be reduced by a bid-offer spread, which may vary depending on the aggregate face amount of the securities to be purchased in the secondary market transaction, and the expected cost of unwinding any related hedging transactions. Accordingly, unless market conditions and other relevant factors change significantly in your favor, any secondary market price for the securities is likely to be less than the original offering price.

If WFS or any of its affiliates makes a secondary market in the securities at any time up to the issue date or during the 3-month period following the issue date, the secondary market price offered by WFS or any of its affiliates will be increased by an amount reflecting a portion of the costs associated with selling, structuring, hedging and issuing the securities that are included in the original offering price. Because this portion of the costs is not fully deducted upon issuance, any secondary market price offered by WFS or any of its affiliates during this period will be higher than it would be if it were based solely on WFS's proprietary pricing models less the bid-offer spread and hedging unwind costs described above. The amount of this increase in the secondary market price will decline steadily to zero over this 3-month period. If you hold the securities through an account at WFS or any of its affiliates, we expect that this increase will also be reflected in the value indicated for the securities on your brokerage account statement.

If WFS or any of its affiliates makes a secondary market in the securities, WFS expects to provide those secondary market prices to any unaffiliated broker-dealers through which the securities are held and to commercial pricing vendors. If you hold your securities through an account at a broker-dealer other than WFS or any of its affiliates, that broker-dealer may obtain market prices for the securities from WFS (directly or indirectly), but could also obtain such market prices from other sources, and may be willing to purchase the securities at any given time at a price that differs from the price at which WFS or any of its affiliates is willing to purchase the securities. As a result, if you hold your securities through an account at a broker-dealer other than WFS or any of its affiliates, the value of the securities on

your brokerage account statement may be different than if you held your securities at WFS or any of its affiliates.

The securities will not be listed or displayed on any securities exchange or any automated quotation system. Although WFS and/or its affiliates may buy the securities from investors, they are not obligated to do so and are not required to make a market for the securities. There can be no assurance that a secondary market will develop.

PRS-4

Market Linked Securities Auto-Callable with Contingent Coupon and

Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Investor Considerations

We have designed the securities for investors who:

seek an investment with contingent monthly coupon payments at a rate of 12.20% to 13.20% per annum (to be determined on the pricing date) until the earlier of stated maturity or automatic call, if, **and only if**, the stock closing price of the lowest performing Underlying Stock on the applicable monthly calculation day is greater than or equal to 60% of its starting price;

understand that if the stock closing price of the lowest performing Underlying Stock on the final calculation day has declined by more than 40% from its starting price, they will be fully exposed to the decline in the lowest performing Underlying Stock from its starting price and will lose more than 40%, and possibly all, of the original offering price at stated maturity;

are willing to accept the risk that they may not receive any contingent coupon payment on one or more, or any, monthly contingent coupon payment dates over the term of the securities and may lose all of the original offering price per security at maturity;

understand that the securities may be automatically called prior to stated maturity if the stock closing price of the lowest performing Underlying Stock on any quarterly call date is greater than or equal to 95% of its starting price and that the term of the securities may be as short as approximately six months;

understand that the return on the securities will depend solely on the performance of the Underlying Stock that is the lowest performing Underlying Stock on each calculation day and that they will not benefit in any way from the performance of the better performing Underlying Stocks;

understand that the securities are riskier than alternative investments linked to only one of the Underlying Stocks or linked to a basket composed of each Underlying Stock;

understand and are willing to accept the full downside risks of each Underlying Stock;

are willing to forgo participation in any appreciation of any Underlying Stock and dividends on any Underlying Stock; and

are willing to hold the securities to maturity.

The securities are not designed for, and may not be a suitable investment for, investors who:

seek a liquid investment or are unable or unwilling to hold the securities to maturity;

require full payment of the original offering price of the securities at stated maturity;

seek a security with a fixed term;

are unwilling to purchase securities with an estimated value as of the pricing date that is lower than the original offering price and that may be as low as the lower estimated value set forth on the cover page;

are unwilling to accept the risk that the stock closing price of the lowest performing Underlying Stock on the final calculation day may decline by more than 40% from its starting price;

seek certainty of current income over the term of the securities;

seek exposure to the upside performance of any or each Underlying Stock;

seek exposure to a basket composed of each Underlying Stock or a similar investment in which the overall return is based on a blend of the performances of the Underlying Stocks, rather than solely on the lowest performing Underlying Stock;

are unwilling to accept the risk of exposure to the Underlying Stocks;

are unwilling to accept the credit risk of Wells Fargo; or

prefer the lower risk of conventional fixed income investments with comparable maturities issued by companies with comparable credit ratings.

Market Linked Securities Auto-Callable with Contingent Coupon and**Contingent Downside**

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Terms of the Securities

Market Measures:	The common stock of Lowe's Companies, Inc., the common stock of Intel Corporation, the common stock of Delta Air Lines, Inc. and the common stock of JPMorgan Chase & Co. (each referred to as an <u>Underlying Stock</u> , and collectively as the <u>Underlying Stocks</u>). We refer to the issuer of each Underlying Stock as an <u>Underlying Stock Issuer</u> and collectively as the <u>Underlying Stock Issuers</u> .
Pricing Date:	December 21, 2017.*
Issue Date:	December 27, 2017.* (T+3)
Original Offering Price:	\$1,000 per security. References in this pricing supplement to a <u>security</u> are to a security with a face amount of \$1,000.
Contingent Coupon Payment:	<p>On each contingent coupon payment date, you will receive a contingent coupon payment at a per annum rate equal to the contingent coupon rate if, and only if, the stock closing price of the lowest performing Underlying Stock on the related calculation day is greater than or equal to its downside threshold price.</p> <p>If the stock closing price of the lowest performing Underlying Stock on any calculation day is less than its downside threshold price, you will not receive any contingent coupon payment on the related contingent coupon payment date. If the stock closing price of the lowest performing Underlying Stock is less than its downside threshold price on all monthly calculation days, you will not receive any contingent coupon payments over the term of the securities.</p>

	<p>Each monthly contingent coupon payment, if any, will be calculated per security as follows: $\\$1,000 \times \text{contingent coupon rate} \times (30/360)$. Any contingent coupon payments will be rounded to the nearest cent, with one-half cent rounded upward.</p>
<p>Contingent Coupon Payment Dates:</p>	<p>Monthly, on the third business day following each calculation day (as each such calculation day may be postponed pursuant to Postponement of a Calculation Day below, if applicable), provided that the contingent coupon payment date with respect to the final calculation day will be the stated maturity date. If a calculation day is postponed with respect to one or more Underlying Stocks, the related contingent coupon payment date will be three business days after the last calculation day as postponed.</p>
<p>Contingent Coupon Rate:</p>	<p>The <u>contingent coupon rate</u> will be determined on the pricing date and will be within the range of 12.20% to 13.20% per annum.</p>
<p>Automatic Call:</p>	<p>If the stock closing price of the lowest performing Underlying Stock on any of the quarterly call dates from June 2018 to September 2020, inclusive, is greater than or equal to its call threshold price, the securities will be automatically called, and on the related call settlement date you will be entitled to receive a cash payment per security in U.S. dollars equal to the original offering price per security plus a final contingent coupon payment.</p> <p>For the avoidance of doubt, if the securities are automatically called, the final contingent coupon payment due with respect to the related call date (i.e., the calculation day occurring in March, June, September and December, as applicable) is the same contingent coupon payment that would otherwise be due with respect to the related calculation day and is not in duplication of the provisions set forth above under Contingent Coupon Payment.</p> <p>The securities are subject to automatic call on the first quarterly call date, which is approximately six months after the issue date. If the securities are automatically called, they will cease to be outstanding on the related call settlement date and you will have no further rights under the securities after such call settlement date. You will not receive any notice from us if the securities are automatically called.</p>

Market Linked Securities Auto-Callable with Contingent Coupon and**Contingent Downside**

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowes Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Terms of the Securities (Continued)

Calculation Days:	<p>Monthly, on the 21st day of each month, commencing January 2018 and ending November 2020, and the final calculation day*, each subject to postponement as described below under Postponement of a Calculation Day. We refer to December 21, 2020* as <u>the final calculation day</u>.</p>
Call Dates:	<p>Quarterly, on the calculation days occurring in each March, June, September and December, commencing June 2018 and ending September 2020*, each subject to postponement as described below under Postponement of a Calculation Day.</p>
Call Settlement Date:	<p>Three business days after the applicable call date (as such call date may be postponed pursuant to Postponement of a Calculation Day below, if applicable). If a call date is postponed with respect to one or more Underlying Stocks, the related call settlement date will be three business days after the last call date as postponed.</p>
Stated Maturity Date:	<p>December 24, 2020*. If the final calculation day is postponed, the stated maturity date will be the later of (i) December 24, 2020* and (ii) three business days after the last final calculation day as postponed. See Postponement of a Calculation Day below. If the stated maturity date is not a business day, the payment to be made on the stated maturity date will be made on the next succeeding business day with the same force and effect as if it had been made on the stated maturity date. The securities are not subject to repayment at the option of any holder of the securities prior to the stated maturity date.</p>
	<p>If the securities are not automatically called prior to the stated maturity date, you will be entitled to receive on the stated maturity date a cash payment per security in U.S. dollars equal to the redemption amount (in addition to the final contingent coupon payment, if any). The <u>redemption amount</u> per security will equal:</p>

if the ending price of the lowest performing Underlying Stock on the final calculation day is greater than or equal to its downside threshold price: \$1,000; or

if the ending price of the lowest performing Underlying Stock on the final calculation day is less than its downside threshold price:

$\$1,000 \times$ performance factor of the lowest performing Underlying Stock on the final calculation day

If the securities are not automatically called prior to stated maturity and the ending price of the lowest performing Underlying Stock on the final calculation day is less than its downside threshold price, you will lose more than 40%, and possibly all, of the original offering price of your securities at stated maturity.

Any return on the securities will be limited to the sum of your contingent coupon payments, if any. You will not participate in any appreciation of any Underlying Stock, but you will have full downside exposure to the lowest performing Underlying Stock on the final calculation day if the ending price of that Underlying Stock is less than its downside threshold price.

All calculations with respect to the redemption amount will be rounded to the nearest one hundred-thousandth, with five one-millionths rounded upward (e.g., 0.000005 would be rounded to 0.00001); and the redemption amount will be rounded to the nearest cent, with one-half cent rounded upward.

**Lowest
Performing
Underlying
Stock:**

For any calculation day (including the call dates), the lowest performing Underlying Stock will be the Underlying Stock with the lowest performance factor on that calculation day (as such calculation day may be postponed for one or more Underlying Stocks pursuant to Postponement of a Calculation Day below, if applicable).

*To the extent that we make any change to the expected pricing date or expected issue date, the calculation days, the call dates and stated maturity date may also be changed in our discretion to ensure that the term of the securities remains the same.

Market Linked Securities Auto-Callable with Contingent Coupon and**Contingent Downside**

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Terms of the Securities (Continued)	
Performance Factor:	With respect to an Underlying Stock on any calculation day (including the call dates), its stock closing price on such calculation day <i>divided by</i> its starting price (expressed as a percentage).
Stock Closing Price:	The <u>stock closing price</u> with respect to each Underlying Stock on a calculation day (including the call dates), means the product of the closing price of such Underlying Stock and the adjustment factor for such Underlying Stock, each on such calculation day.
Adjustment Factor:	The <u>adjustment factor</u> for each Underlying Stock is initially 1.0. The adjustment factor for each Underlying Stock will remain constant for the term of the securities, subject to adjustment for certain corporate events relating to the applicable Underlying Stock Issuer as described in the section entitled <u>Additional Terms of the Securities Adjustment Events</u> below
Starting Price:	<p>With respect to the common stock of Lowe's Companies, Inc.: \$ _____, its stock closing price on the pricing date.</p> <p>With respect to the common stock of Intel Corporation: \$ _____, its stock closing price on the pricing date.</p> <p>With respect to the common stock of Delta Air Lines, Inc.: \$ _____, its stock closing price on the pricing date.</p> <p>With respect to the common stock of JPMorgan Chase & Co.: \$ _____, its stock closing price on the pricing date.</p>

Ending Price:	The <u>ending price</u> of an Underlying Stock will be its stock closing price on the final calculation day.
Call Threshold Price:	<p>With respect to the common stock of Lowe's Companies, Inc.: \$ _____, which is equal to 95% of its starting price.</p> <p>With respect to the common stock of Intel Corporation: \$ _____, which is equal to 95% of its starting price.</p> <p>With respect to the common stock of Delta Air Lines, Inc.: \$ _____, which is equal to 95% of its starting price.</p> <p>With respect to the common stock of JPMorgan Chase & Co.: \$ _____, which is equal to 95% of its starting price.</p>
Downside Threshold Price:	<p>With respect to the common stock of Lowe's Companies, Inc.: \$ _____, which is equal to 60% of its starting price.</p> <p>With respect to the common stock of Intel Corporation: \$ _____, which is equal to 60% of its starting price.</p> <p>With respect to the common stock of Delta Air Lines, Inc.: \$ _____, which is equal to 60% of its starting price.</p> <p>With respect to the common stock of JPMorgan Chase & Co.: \$ _____, which is equal to 60% of its starting price.</p>
Postponement of a Calculation Day:	The call dates are the same dates as the calculation days occurring in March, June, September and December of each year, commencing June 2018 and ending September 2020, and for purposes of postponement are also referred to as a calculation day. If any calculation day is not a trading day with respect to any Underlying Stock, such calculation day for each Underlying Stock will be postponed to the next succeeding day that is a trading day with respect to each Underlying Stock. A calculation day for an Underlying Stock is also subject to postponement due to the occurrence of a market disruption event with respect to such Underlying Stock on such calculation day. See

Additional Terms of the Securities Market Disruption Events.

Determining Payment On A Contingent Coupon Payment Date and at Maturity

If the securities have not been previously automatically called, on each monthly contingent coupon payment date, you will either receive a contingent coupon payment or you will not receive a contingent coupon payment, depending on the stock closing price of the lowest performing Underlying Stock on the related monthly calculation day.

Step 1: Determine which Underlying Stock is the lowest performing Underlying Stock on the relevant calculation day. The lowest performing Underlying Stock on any calculation day is the Underlying Stock with the lowest performance factor on that calculation day. The performance factor of an Underlying Stock on a calculation day is its stock closing price on that calculation day as a percentage of its starting price (i.e., its stock closing price on that calculation day *divided by* its starting price).

Step 2: Determine whether a contingent coupon is paid on the applicable contingent coupon payment date based on the stock closing price of the lowest performing Underlying Stock on the relevant calculation day, as follows:

On the stated maturity date, if the securities have not been automatically called prior to the stated maturity date, you will receive (in addition to the final contingent coupon payment, if any) a cash payment per security (the redemption amount) calculated as follows:

Step 1: Determine which Underlying Stock is the lowest performing Underlying Stock on the final calculation day. The lowest performing Underlying Stock on the final calculation day is the Underlying Stock with the lowest performance factor on the final calculation day. The performance factor of an Underlying Stock on the final calculation day is its ending price as a percentage of its starting price (i.e., its ending price *divided by* its starting price).

Step 2: Calculate the redemption amount based on the ending price of the lowest performing Underlying Stock, as follows:

Hypothetical Payout Profile

The following profile illustrates the potential payment at stated maturity on the securities (excluding the final contingent coupon payment, if any) for a range of hypothetical performances of the lowest performing Underlying Stock on the final calculation day from its starting price to its ending price, assuming the securities have not been automatically called prior to the stated maturity date. This graph has been prepared for purposes of illustration only. Your actual return will depend on the actual ending price of the lowest performing Underlying Stock on the final calculation day and whether you hold your securities to stated maturity. The performance of the better performing Underlying Stocks is not relevant to your return on the securities.

Market Linked Securities Auto-Callable with Contingent Coupon and

Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Risk Factors

The securities have complex features and investing in the securities will involve risks not associated with an investment in conventional debt securities. You should carefully consider the risk factors set forth below as well as the other information contained in this pricing supplement and the accompanying prospectus supplement and prospectus, including the documents they incorporate by reference. As described in more detail below, the value of the securities may vary considerably before the stated maturity date due to events that are difficult to predict and are beyond our control. You should reach an investment decision only after you have carefully considered with your advisors the suitability of an investment in the securities in light of your particular circumstances.

If The Securities Are Not Automatically Called Prior to Stated Maturity, You May Lose Some Or All Of The Original Offering Price Of Your Securities At Stated Maturity.

We will not repay you a fixed amount on your securities at stated maturity. If the securities are not automatically called prior to stated maturity, you will receive a payment at stated maturity that will be equal to or less than the original offering price per security, depending on the ending price of the lowest performing Underlying Stock on the final calculation day.

If the ending price of the lowest performing Underlying Stock on the final calculation day is less than its downside threshold price, the payment you receive at stated maturity will be reduced by an amount equal to the decline in the price of the lowest performing Underlying Stock from its starting price (expressed as a percentage of its starting price). The downside threshold price for each Underlying Stock is 60% of its starting price. For example, if the securities are not automatically called and the lowest performing Underlying Stock on the final calculation day has declined by 40.1% from its starting price to its ending price, you will not receive any benefit of the contingent downside protection feature and you will lose 40.1% of the original offering price per security. As a result, you will not receive any protection if the price of the lowest performing Underlying Stock on the final calculation day declines significantly and you may lose some, and possibly all, of the original offering price per security at stated maturity, even if the price of the lowest performing Underlying Stock is greater than or equal to its starting price or its downside threshold price at certain times during the term of the securities.

Even if the ending price of the lowest performing Underlying Stock on the final calculation day is greater than its downside threshold price, the amount you receive at stated maturity will not exceed the original offering price, and your yield on the securities, taking into account any contingent coupon payments you may have received during the term of the securities, may be less than the yield you would earn if you bought a traditional interest-bearing debt security of Wells Fargo or another issuer with a similar credit rating.

The Securities Do Not Provide For Fixed Payments Of Interest And You May Receive No Coupon Payments On One Or More Monthly Contingent Coupon Payment Dates, Or Even Throughout The Entire Three-Year Term Of The Securities.

On each monthly contingent coupon payment date you will receive a contingent coupon payment if, **and only if**, the stock closing price of the lowest performing Underlying Stock on the related calculation day is greater than or equal to its downside threshold price. If the stock closing price of the lowest performing Underlying Stock on any calculation day is less than its downside threshold price, you will not receive any contingent coupon payment on the related contingent coupon payment date, and if the stock closing price of the lowest performing Underlying Stock is less than its downside threshold price on each calculation day over the term of the securities, you will not receive any contingent coupon payments over the entire three-year term of the securities.

The Securities Are Subject To The Full Risks Of Each Underlying Stock And Will Be Negatively Affected If Any Underlying Stock Performs Poorly, Even If The Other Underlying Stocks Perform Favorably.

You are subject to the full risks of each Underlying Stock. If any Underlying Stock performs poorly, you will be negatively affected, even if the other Underlying Stocks perform favorably. The securities are not linked to a basket composed of the Underlying Stocks, where the better performance of some Underlying Stocks could offset the poor performance of others. Instead, you are subject to the full risks of whichever Underlying Stock is the lowest performing Underlying Stock on each calculation day. As a result, the securities are riskier than an alternative investment linked to only one of the Underlying Stocks or linked to a basket composed of each Underlying Stock. You should not invest in the securities unless you understand and are willing to accept the full downside risks of each Underlying Stock.

Market Linked Securities Auto-Callable with Contingent Coupon and

Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Risk Factors (Continued)

Your Return On The Securities Will Depend Solely On The Performance Of The Underlying Stock That Is The Lowest Performing Underlying Stock On Each Calculation Day, And You Will Not Benefit In Any Way From The Performance Of The Better Performing Underlying Stocks.

Your return on the securities will depend solely on the performance of the Underlying Stock that is the lowest performing Underlying Stock on each calculation day. Although it is necessary for each Underlying Stock to close above its respective downside threshold price on the relevant calculation day in order for you to receive a monthly contingent coupon payment and for you to be repaid the original offering price of your securities at maturity, you will not benefit in any way from the performance of the better performing Underlying Stocks. The securities may underperform an alternative investment linked to a basket composed of the Underlying Stocks, since in such case the performance of the better performing Underlying Stocks would be blended with the performance of the lowest performing Underlying Stock, resulting in a better return than the return of the lowest performing Underlying Stock alone.

You Will Be Subject To Risks Resulting From The Relationship Among The Underlying Stocks.

It is preferable from your perspective for the Underlying Stocks to be correlated with each other so that their prices will tend to increase or decrease at similar times and by similar magnitudes. By investing in the securities, you assume the risk that the Underlying Stocks will not exhibit this relationship. The less correlated the Underlying Stocks, the more likely it is that any one of the Underlying Stocks will be performing poorly at any time over the term of the securities. All that is necessary for the securities to perform poorly is for one of the Underlying Stocks to perform poorly; the performance of the better performing Underlying Stocks is not relevant to your return on the securities. It is impossible to predict what the relationship among the Underlying Stocks will be over the term of the securities. Each Underlying Stock Issuer operates in a different industry and sector of the market and is subject to different, complex and unpredictable factors that may affect its performance. These different sectors, and thus the Underlying Stocks, may not perform similarly over the term of the securities.

You May Be Fully Exposed To The Decline In The Lowest Performing Underlying Stock On The Final Calculation Day From Its Starting Price, But Will Not Participate In Any Positive Performance Of Any Underlying Stock.

Even though you will be fully exposed to a decline in the price of the lowest performing Underlying Stock on the final calculation day if its ending price is below its downside threshold price, you will not participate in any increase in the price of any Underlying Stock over the term of the securities. Your maximum possible return on the securities will be limited to the sum of the contingent coupon payments you receive, if any. Consequently, your return on the securities

may be significantly less than the return you could achieve on an alternative investment that provides for participation in an increase in the price of any or each Underlying Stock.

Higher Contingent Coupon Rates Are Associated With Greater Risk.

The securities offer contingent coupon payments at a higher rate, if paid, than the fixed rate we would pay on conventional debt securities of the same maturity. These higher potential contingent coupon payments are associated with greater levels of expected risk as of the pricing date as compared to conventional debt securities, including the risk that you may not receive a contingent coupon payment on one or more, or any, contingent coupon payment dates and the risk that you may lose a substantial portion, and possibly all, of the original offering price per security at maturity. The volatility of the Underlying Stocks and the correlation among the Underlying Stocks are important factors affecting this risk. Volatility is a measurement of the size and frequency of daily fluctuations in the price of an Underlying Stock, typically observed over a specified period of time. Volatility can be measured in a variety of ways, including on a historical basis or on an expected basis as implied by option prices in the market. Correlation is a measurement of the extent to which the prices of the Underlying Stocks tend to fluctuate at the same time, in the same direction and in similar magnitudes. Greater expected volatility of the Underlying Stocks or lower expected correlation among the Underlying Stocks as of the pricing date may result in a higher contingent coupon rate, but it also represents a greater expected likelihood as of the pricing date that the stock closing price of at least one Underlying Stock will be less than its downside threshold price on one or more calculation days, such that you will not receive one or more, or any, contingent coupon payments during the term of the securities, and that the stock closing price of at least one Underlying Stock will be less than its downside threshold price on the final calculation day such that you will lose a substantial portion, and possibly all, of the original offering price per security at maturity. In general, the higher the contingent coupon rate is relative to the fixed rate we would pay on conventional debt securities, the greater the expected risk that you will not receive one or more, or any, contingent coupon payments during the term of the securities and that you will lose a substantial portion, and possibly all, of the original offering price per security at maturity.

Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Risk Factors (Continued)

You Will Be Subject To Reinvestment Risk.

If your securities are automatically called, the term of the securities may be reduced to as short as approximately six months. There is no guarantee that you would be able to reinvest the proceeds from an investment in the securities at a comparable return for a similar level of risk in the event the securities are automatically called prior to maturity.

The Call Threshold Price For Each Underlying Stock Is Less Than Its Starting Price.

The securities will be automatically called if the stock closing price of the lowest performing Underlying Stock on any call date is greater than or equal to its call threshold price, which is equal to 95% of its starting price. Therefore, it is possible that the securities will be automatically called on a call date even when the stock closing price of the lowest performing Underlying Stock on that call date is less than its starting price. Accordingly, unless the stock closing price of the lowest performing Underlying Stock declines by more than 5% from the pricing date to the first call date, the securities will be automatically called on the call settlement date immediately following the first call date, which is approximately six months after the issue date.

The Securities Are Subject To The Credit Risk Of Wells Fargo.

The securities are our obligations and are not, either directly or indirectly, an obligation of any third party. Any amounts payable under the securities are subject to our creditworthiness, and you will have no ability to pursue any Underlying Stock for payment. As a result, our actual and perceived creditworthiness may affect the value of the securities and, in the event we were to default on our obligations, you may not receive any amounts owed to you under the terms of the securities.

The Estimated Value Of The Securities On The Pricing Date, Based On WFS's Proprietary Pricing Models, Will Be Less Than The Original Offering Price.

The original offering price of the securities includes certain costs that are borne by you. Because of these costs, the estimated value of the securities on the pricing date will be less than the original offering price. The costs included in the original offering price relate to selling, structuring, hedging and issuing the securities, as well as to our funding considerations for debt of this type. The costs related to selling, structuring, hedging and issuing the securities include (i) the agent discount, (ii) the projected profit that our hedge counterparty (which may be one of our affiliates) expects to realize for assuming risks inherent in hedging our obligations under the securities and (iii) hedging and other costs relating to the offering of the securities. Our funding considerations are reflected in the fact that we determine the economic terms of the securities based on an assumed funding rate that is generally lower than our secondary market

rates. If the costs relating to selling, structuring, hedging and issuing the securities were lower, or if the assumed funding rate we use to determine the economic terms of the securities were higher, the economic terms of the securities would be more favorable to you and the estimated value would be higher.

The Estimated Value Of The Securities Is Determined By Our Affiliate s Pricing Models, Which May Differ From Those Of Other Dealers.

The estimated value of the securities was determined for us by WFS using its proprietary pricing models and related market inputs and assumptions referred to above under Investment Description Determining the estimated value. Certain inputs to these models may be determined by WFS in its discretion. WFS s views on these inputs may differ from other dealers views, and WFS s estimated value of the securities may be higher, and perhaps materially higher, than the estimated value of the securities that would be determined by other dealers in the market. WFS s models and its inputs and related assumptions may prove to be wrong and therefore not an accurate reflection of the value of the securities.

The Estimated Value Of The Securities Is Not An Indication Of The Price, If Any, At Which WFS Or Any Other Person May Be Willing To Buy The Securities From You In The Secondary Market.

The price, if any, at which WFS or any of its affiliates may purchase the securities in the secondary market will be based on WFS s proprietary pricing models and will fluctuate over the term of the securities as a result of changes in the market and other factors described in the next risk factor. Any such secondary market price for the securities will also be reduced by a bid-offer spread, which may vary depending on the aggregate face amount of the securities to be purchased in the secondary market transaction, and the expected cost of unwinding any related hedging transactions. Unless the factors described in the next risk factor change significantly in your favor, any such secondary market price for the securities is likely to be less than the original offering price.

If WFS or any of its affiliates makes a secondary market in the securities at any time up to the issue date or during the 3-month period following the issue date, the secondary market price offered by WFS or any of its affiliates will be increased by an amount reflecting a portion of the costs associated with selling, structuring, hedging and issuing the securities that are included in the original offering price. Because this portion of the costs is not fully deducted upon issuance, any secondary market price offered by WFS or any of its affiliates during this period will be higher than it would be if it were based solely on WFS s proprietary pricing models less the bid-offer spread and hedging unwind costs described above. The amount of this increase in the secondary market price will decline

Risk Factors (Continued)

steadily to zero over this 3-month period. If you hold the securities through an account at WFS or any of its affiliates, we expect that this increase will also be reflected in the value indicated for the securities on your brokerage account statement. If you hold your securities through an account at a broker-dealer other than WFS or any of its affiliates, the value of the securities on your brokerage account statement may be different than if you held your securities at WFS or any of its affiliates, as discussed above under Investment Description.

The Value Of The Securities Prior To Stated Maturity Will Be Affected By Numerous Factors, Some Of Which Are Related In Complex Ways.

The value of the securities prior to stated maturity will be affected by the price of each Underlying Stock at that time, interest rates at that time and a number of other factors, some of which are interrelated in complex ways. The effect of any one factor may be offset or magnified by the effect of another factor. The following factors, which we refer to as the derivative component factors, are expected to affect the value of the securities. When we refer to the value of your security, we mean the value you could receive for your security if you are able to sell it in the open market before the stated maturity date.

Performance of the Underlying Stocks. The value of the securities prior to maturity will depend substantially on the price of each Underlying Stock. The price at which you may be able to sell the securities before stated maturity may be at a discount, which could be substantial, from their original offering price, if the price of the lowest performing Underlying Stock at such time is less than, equal to or not sufficiently above its starting price, call threshold price or its downside threshold price.

Interest Rates. The value of the securities may be affected by changes in the interest rates in the U.S. markets.

Volatility Of The Underlying Stocks. Volatility is the term used to describe the size and frequency of market fluctuations. The value of the securities may be affected if the volatility of the Underlying Stocks changes.

Correlation Among The Underlying Stocks. Correlation refers to the extent to which the prices of the Underlying Stocks tend to fluctuate at the same time, in the same direction and in similar magnitudes. The correlation among the Underlying Stocks may be positive, zero or negative. The value of the securities is likely

to decrease if the correlation among the Underlying Stocks decreases.

Time Remaining To Maturity. The value of the securities at any given time prior to maturity will likely be different from that which would be expected based on the then-current prices of the Underlying Stocks. This difference will most likely reflect a discount due to expectations and uncertainty concerning the prices of the Underlying Stocks during the period of time still remaining to the stated maturity date.

Dividend Yields On The Underlying Stocks. The value of the securities may be affected by the dividend yields on the Underlying Stocks.

In addition to the derivative component factors, the value of the securities will be affected by actual or anticipated changes in our creditworthiness, as reflected in our secondary market rates. The value of the securities will also be limited by the automatic call feature because if the securities are automatically called, you will not receive the contingent coupon payments that would have accrued, if any, had the securities been called on a later calculation day or held until the stated maturity date. You should understand that the impact of one of the factors specified above, such as a change in interest rates, may offset some or all of any change in the value of the securities attributable to another factor, such as a change in the price of any or all of the Underlying Stocks. Because numerous factors are expected to affect the value of the securities, changes in the price of the Underlying Stocks may not result in a comparable change in the value of the securities.

The Securities Will Not Be Listed On Any Securities Exchange And We Do Not Expect A Trading Market For The Securities To Develop.

The securities will not be listed or displayed on any securities exchange or any automated quotation system. Although the agent and/or its affiliates may purchase the securities from holders, they are not obligated to do so and are not required to make a market for the securities. There can be no assurance that a secondary market will develop. Because we do not expect that any market makers will participate in a secondary market for the securities, the price at which you may be able to sell your securities is likely to depend on the price, if any, at which the agent is willing to buy your securities.

If a secondary market does exist, it may be limited. Accordingly, there may be a limited number of buyers if you decide to sell your securities prior to stated maturity. This may affect the price you receive upon such sale. Consequently, you should be willing to hold the securities to stated maturity.

Market Linked Securities Auto-Callable with Contingent Coupon and

Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Risk Factors (Continued)

Historical Prices Of The Underlying Stocks Should Not Be Taken As An Indication Of The Future Performance Of The Underlying Stocks During The Term Of The Securities.

It is impossible to predict whether the market prices of the Underlying Stocks will rise or fall. The Underlying Stocks have performed differently in the past and are expected to perform differently in the future. The market prices of the Underlying Stocks will be influenced by complex and interrelated political, economic, financial and other factors that can affect the Underlying Stock Issuers. Accordingly, any historical performances of the Underlying Stocks does not provide an indication of the future performances of the Underlying Stocks.

You Will Not Have Any Shareholder Rights.

Investing in the securities is not equivalent to investing in any of the Underlying Stocks. As an investor in the securities, you will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to any of the Underlying Stocks.

The Securities May Become Linked To The Common Stock Of Companies Other Than The Original Underlying Stock Issuers.

Following certain corporate events relating to an Underlying Stock, such as a stock-for-stock merger where the applicable Underlying Stock Issuer is not the surviving entity, the shares of a successor corporation to such Underlying Stock Issuer will be substituted for such Underlying Stock for all purposes of the securities. Following certain other corporate events relating to an Underlying Stock in which holders of such Underlying Stock would receive all of their consideration in cash and the surviving entity has no marketable securities outstanding or there is no surviving entity (including, but not limited to, a leveraged buyout or other going private transaction involving such Underlying Stock Issuer, or a liquidation of such Underlying Stock Issuer), the common stock of another company in the same industry group as such Underlying Stock Issuer will be substituted for such Underlying Stock for all purposes of the securities. In the event of such a corporate event, the equity-linked nature of the securities would be significantly altered. We describe the specific corporate events that can lead to these adjustments and the procedures for selecting those other reference stocks in the section entitled **Additional Terms of the Securities Adjustment Events**. The occurrence of such corporate events and the consequent adjustments may materially and adversely affect the market price of the securities.

We Cannot Control Actions By The Underlying Stock Issuers.

Actions by an Underlying Stock Issuer may have an adverse effect on the price of such Underlying Stock, the stock closing price of such Underlying Stock on any calculation day, the ending price of such Underlying Stock and the value of the securities. We are not affiliated with any of the Underlying Stock Issuers. The Underlying Stock Issuers will not be involved in the offering of the securities and will have no obligations with respect to the securities, including any obligation to take our interests or your interests into consideration for any reason. The Underlying Stock Issuers will not receive any of the proceeds of the offering of the securities and will not be responsible for, and will not have participated in, the determination of the timing of, prices for, or quantities of, the securities to be issued. The Underlying Stock Issuers will not be involved with the administration, marketing or trading of the securities and will have no obligations with respect to any amounts payable on the securities.

We And Our Affiliates Have No Affiliation With Any Underlying Stock Issuer And Have Not Independently Verified Their Public Disclosure Of Information.

We and our affiliates are not affiliated in any way with any Underlying Stock Issuer. This pricing supplement relates only to the securities and does not relate to the Underlying Stocks. The material provided herein concerning the Underlying Stock Issuers is derived from publicly available documents concerning such companies without independent verification. Neither we nor the agent has participated in the preparation of any of those documents or made any due diligence investigation or any inquiry of the Underlying Stock Issuers. Furthermore, neither we nor the agent knows whether the Underlying Stock Issuers have disclosed all events occurring before the date of this pricing supplement including events that could affect the accuracy or completeness of the publicly available documents referred to above. Subsequent disclosure of any event of this kind or the disclosure of or failure to disclose material future events concerning the Underlying Stock Issuers could affect the value of the securities and the amount payable on the securities. You, as an investor in the securities, should make your own investigation into the Underlying Stock Issuers.

In addition, there can be no assurance that any Underlying Stock Issuer will continue to be subject to the reporting requirements of the Securities Exchange Act of 1934, as amended (the Exchange Act), and will distribute any reports, proxy statements, and other information required thereby to its shareholders. In the event that any Underlying Stock Issuer ceases to be subject to such reporting requirements and the securities continue to be outstanding, pricing information for the securities may be more difficult to obtain and the value and liquidity of the securities may be adversely affected. Neither we nor any agent is responsible for the public disclosure of information by any Underlying Stock Issuer, whether contained in filings with the Securities and Exchange Commission (the SEC) or otherwise.

Market Linked Securities Auto-Callable with Contingent Coupon and

Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Risk Factors (Continued)

You Have Limited Antidilution Protection.

The calculation agent will, in its sole discretion, adjust the adjustment factor of an Underlying Stock for certain events affecting such Underlying Stock, such as stock splits and stock dividends, and certain other corporate actions involving the applicable Underlying Stock Issuer, such as mergers. However, the calculation agent is not required to make an adjustment for every corporate event that can affect an Underlying Stock. For example, the calculation agent is not required to make any adjustments to the adjustment factor of an Underlying Stock if the applicable Underlying Stock Issuer or anyone else makes a partial tender or partial exchange offer for such Underlying Stock. Consequently, this could affect the market value of the securities. See Additional Terms of the Securities Adjustment Events for a description of the general circumstances in which the calculation agent will make adjustments to the adjustment factor of an Underlying Stock.

A Contingent Coupon Payment Date, A Call Settlement Date And The Stated Maturity Date May Be Postponed If A Calculation Day Is Postponed.

A calculation day (including the final calculation day) with respect to an Underlying Stock will be postponed if the applicable originally scheduled calculation day is not a trading day with respect to any Underlying Stock or if the calculation agent determines that a market disruption event has occurred or is continuing with respect to that Underlying Stock on that calculation day. If such a postponement occurs with respect to a calculation day other than the final calculation day, then the related contingent coupon payment date or call settlement date, as applicable, will be postponed. If such a postponement occurs with respect to the final calculation day, the stated maturity date will be the later of (i) the initial stated maturity date and (ii) three business days after the last final calculation day as postponed.

Our Economic Interests And Those Of Any Dealer Participating In The Offering Are Potentially Adverse To Your Interests.

You should be aware of the following ways in which our economic interests and those of any dealer participating in the distribution of the securities, which we refer to as a participating dealer, are potentially adverse to your interests as an investor in the securities. In engaging in certain of the activities described below, our affiliates or any participating dealer or its affiliates may take actions that may adversely affect the value of and your return on the securities, and in so doing they will have no obligation to consider your interests as an investor in the securities. Our affiliates or any participating dealer or its affiliates may realize a profit from these activities even if investors do not receive a favorable investment return on the securities.

The calculation agent is our affiliate and may be required to make discretionary judgments that affect the return you receive on the securities. WFS, which is our affiliate, will be the calculation agent for the securities. As calculation agent, WFS will determine the stock closing price of each Underlying Stock on each calculation day, the ending price of each Underlying Stock, whether the securities are automatically called and whether you receive a contingent coupon payment on a contingent coupon payment date and may be required to make other determinations that affect the return you receive on the securities. In making these determinations, the calculation agent may be required to make discretionary judgments, including determining whether a market disruption event has occurred with respect to any Underlying Stock on a scheduled calculation day, which may result in postponement of that calculation day with respect to that Underlying Stock; determining the stock closing price of an Underlying Stock if a calculation day is postponed with respect to that Underlying Stock to the last day to which it may be postponed and a market disruption event occurs with respect to that Underlying Stock on that day; determining the stock closing price of any Underlying Stock if it is not otherwise available; adjusting the adjustment factor for an Underlying Stock in certain circumstances; and if a replacement stock event occurs with respect to an Underlying Stock, selecting a replacement stock to be substituted for such Underlying Stock and making certain other adjustments to the terms of the securities. In making these discretionary judgments, the fact that WFS is our affiliate may cause it to have economic interests that are adverse to your interests as an investor in the securities, and WFS's determinations as calculation agent may adversely affect your return on the securities.

The estimated value of the securities was calculated by our affiliate and is therefore not an independent third-party valuation. WFS calculated the estimated value of the securities set forth on the cover page of this pricing supplement, which involved discretionary judgments by WFS, as described under Risk Factors The Estimated Value Of The Securities Is Determined By Our Affiliate's Pricing Models, Which May Differ From Those Of Other Dealers above. Accordingly, the estimated value of the securities set forth on the cover page of this pricing supplement is not an independent third-party valuation.

Research reports by our affiliates or any participating dealer or its affiliates may be inconsistent with an investment in the securities and may adversely affect the prices of the Underlying Stocks. Our affiliates or any participating dealer in the offering of the securities or its affiliates may, at present or in the future, publish research reports on the Underlying Stocks. This research is modified from time to time without notice and may, at present or in the future, express opinions or provide

Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Risk Factors (Continued)

recommendations that are inconsistent with purchasing or holding the securities. Any research reports on the Underlying Stocks could adversely affect the price of the applicable Underlying Stock and, therefore, could adversely affect the value of and your return on the securities. You are encouraged to derive information concerning the Underlying Stocks from multiple sources and should not rely on the views expressed by us or our affiliates or any participating dealer or its affiliates. In addition, any research reports on the Underlying Stocks published on or prior to the pricing date could result in an increase in the prices of the Underlying Stocks on the pricing date, which would adversely affect investors in the securities by increasing the price at which each Underlying Stock must close on each calculation day (including the final calculation day) in order for investors in the securities to receive a favorable return.

Business activities of our affiliates or any participating dealer or its affiliates with an Underlying Stock Issuer may adversely affect the price of such Underlying Stock. Our affiliates or any participating dealer or its affiliates may, at present or in the future, engage in business with the Underlying Stock Issuers, including making loans to those Underlying Stock Issuers (including exercising creditors' remedies with respect to such loans), making equity investments in those Underlying Stock Issuers or providing investment banking, asset management or other advisory services to those Underlying Stock Issuers. These business activities could adversely affect the price of such Underlying Stock and, therefore, could adversely affect the value of and your return on the securities. In addition, in the course of these business activities, our affiliates or any participating dealer or its affiliates may acquire non-public information about one or more of the Underlying Stock Issuers. If our affiliates or any participating dealer or its affiliates do acquire such non-public information, we and they are not obligated to disclose such non-public information to you.

Hedging activities by our affiliates or any participating dealer or its affiliates may adversely affect the prices of the Underlying Stocks. We expect to hedge our obligations under the securities through one or more hedge counterparties, which may include our affiliates or any participating dealer or its affiliates. Pursuant to such hedging activities, our hedge counterparties may acquire the Underlying Stocks or listed or over-the-counter derivative or synthetic instruments related to the Underlying Stocks. Depending on, among other things, future market conditions, the aggregate amount and the composition of such positions are likely to vary over time. To the extent that our hedge counterparties have a long hedge position in any of the Underlying Stocks, or derivative or synthetic instruments related to the Underlying Stocks, they may liquidate a portion of such holdings at or about the time of a calculation day or at or about the time of a change in the Underlying Stocks. These hedging activities could potentially adversely affect the prices of the Underlying Stocks and, therefore, could adversely affect the value of and your return on the securities.

Trading activities by our affiliates or any participating dealer or its affiliates may adversely affect the prices of the Underlying Stocks. Our affiliates or any participating dealer or its affiliates may engage in trading in the Underlying Stocks and other instruments relating to the Underlying Stocks on a regular basis as part of their general broker-dealer and other businesses. Any of these trading activities could potentially adversely affect the prices of the Underlying Stocks and, therefore, could adversely affect the value of and your return on the securities.

A participating dealer or its affiliates may realize hedging profits projected by its proprietary pricing models in addition to any selling concession, creating a further incentive for the participating dealer to sell the securities to you. If any participating dealer or any of its affiliates conducts hedging activities for us in connection with the securities, that participating dealer or its affiliates will expect to realize a projected profit from such hedging activities and this projected profit will be in addition to any concession that the participating dealer realizes for the sale of the securities to you. This additional projected profit may create a further incentive for the participating dealer to sell the securities to you.

The U.S. Federal Tax Consequences Of An Investment In The Securities Are Unclear.

There is no direct legal authority as to the proper U.S. federal tax treatment of the securities, and we do not intend to request a ruling from the Internal Revenue Service (the IRS). Consequently, significant aspects of the tax treatment of the securities are uncertain, and the IRS or a court might not agree with the treatment of the securities as described in this pricing supplement under United States Federal Tax Considerations. If the IRS were successful in asserting an alternative treatment, the tax consequences of ownership and disposition of the securities might be materially and adversely affected.

Non-U.S. holders should note that persons having withholding responsibility in respect of the securities may withhold on any coupon payment paid to a non-U.S. holder, generally at a rate of 30%. To the extent that we have withholding responsibility in respect of the securities, we intend to so withhold.

In addition, Section 871(m) of the Internal Revenue Code of 1986, as amended (the Code), imposes a withholding tax of up to 30% on dividend equivalents paid or deemed paid to non-U.S. investors in respect of certain financial instruments linked to U.S. equities. In light of IRS regulations providing a general exemption for financial instruments issued in 2017 that do not have a delta of one, as of the date of this preliminary pricing supplement the securities should not be subject to withholding under Section 871(m). However,

Risk Factors (Continued)

information about the application of Section 871(m) to the securities will be updated in the final pricing supplement. Moreover, the IRS could challenge a conclusion that the securities should not be subject to withholding under Section 871(m).

We will not be required to pay any additional amounts with respect to amounts withheld.

You should read carefully the discussion under **United States Federal Tax Considerations** in this pricing supplement and consult your tax adviser regarding the U.S. federal tax consequences of an investment in the securities.

PRS-19

Market Linked Securities Auto-Callable with Contingent Coupon and**Contingent Downside**

Hypothetical Returns

If the securities are automatically called:

If the securities are automatically called prior to stated maturity, you will receive the original offering price of your securities plus a final contingent coupon payment on the call settlement date. In the event the securities are automatically called, your total return on the securities will equal any contingent coupon payments received prior to the call settlement date and the contingent coupon payment received on the call settlement date.

If the securities are not automatically called:

If the securities are not automatically called prior to stated maturity, the following table illustrates, for a range of hypothetical performance factors of the lowest performing Underlying Stock on the final calculation day, the hypothetical redemption amount payable at stated maturity per security (excluding the final contingent coupon payment, if any). The performance factor of the lowest performing Underlying Stock on the final calculation day is its ending price expressed as a percentage of its starting price (i.e., its ending price *divided by* its starting price).

Hypothetical performance factor of lowest performing Underlying Stock on final calculation day	Hypothetical payment at stated maturity per security
175.00%	\$1,000.00
160.00%	\$1,000.00
150.00%	\$1,000.00
140.00%	\$1,000.00
130.00%	\$1,000.00
120.00%	\$1,000.00
110.00%	\$1,000.00
100.00%	\$1,000.00
90.00%	\$1,000.00
80.00%	\$1,000.00
70.00%	\$1,000.00
65.00%	\$1,000.00
60.00%	\$1,000.00
59.00%	\$590.00
50.00%	\$500.00

40.00%	\$400.00
25.00%	\$250.00

The above figures do not take into account contingent coupon payments, if any, received during the term of the securities. As evidenced above, in no event will you have a positive rate of return based solely on the redemption amount received at maturity; any positive return will be based solely on the contingent coupon payments, if any, received during the term of the securities.

The above figures are for purposes of illustration only and may have been rounded for ease of analysis. If the securities are not automatically called prior to stated maturity, the actual amount you will receive at stated maturity will depend on the actual ending price of the lowest performing Underlying Stock on the final calculation day. The performance of the better performing Underlying Stocks is not relevant to your return on the securities.

PRS-20

Market Linked Securities Auto-Callable with Contingent Coupon and**Contingent Downside**

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Hypothetical Contingent Coupon Payments

Set forth below are three examples that illustrate how to determine whether a contingent coupon payment will be paid on a contingent coupon payment date and whether the securities will be automatically called on a call settlement date prior to the stated maturity date. The examples do not reflect any specific contingent coupon payment date or call settlement date. The securities are subject to automatic call only on a subset of the monthly calculation days that are also call dates (i.e., on a quarterly basis on the calculation days scheduled to occur in March, June, September and December from June 2018 to September 2020, inclusive). The following examples reflect a hypothetical contingent coupon rate of 12.70% per annum (the midpoint of the specified range for the contingent coupon rate) and assume the hypothetical starting price, call threshold price, downside threshold price and stock closing prices for each Underlying Stock indicated in the examples. The terms used for purposes of these hypothetical examples do not represent any actual starting price, call threshold price or downside threshold price. The hypothetical starting price of \$100.00 for each Underlying Stock has been chosen for illustrative purposes only and does not represent the actual starting price for any Underlying Stock. The actual starting price, call threshold price and downside threshold price for each Underlying Stock will be determined on the pricing date and will be set forth under Terms of the Securities above. For historical data regarding the actual closing prices of the Underlying Stocks, see the historical information set forth under the sections titled Lowe's Companies, Inc., Intel Corporation, Delta Air Lines, Inc. and JPMorgan Chase & Co. below. These examples are for purposes of illustration only and the values used in the examples may have been rounded for ease of analysis.

Example 1. The stock closing price of the lowest performing Underlying Stock on the relevant calculation day is greater than or equal to its downside threshold price and less than its call threshold price. As a result, investors receive a contingent coupon payment on the applicable contingent coupon payment date. In addition, if the relevant calculation day were also a call date, the securities would not be automatically called on the applicable call settlement date.

	The Common Stock of Lowe's Companies, Inc.	The Common Stock of Intel Corporation	The Common Stock of Delta Air Lines, Inc.	The Common stock of JPMorgan Chase & Co.
Hypothetical starting price:	\$100.00	\$100.00	\$100.00	\$100.00
Hypothetical stock closing price on relevant calculation day:	\$90.00	\$95.00	\$75.00	\$80.00
Hypothetical call threshold price:	\$95.00	\$95.00	\$95.00	\$95.00
Hypothetical downside threshold price:	\$60.00	\$60.00	\$60.00	\$60.00
Performance factor (stock closing price on calculation day <i>divided by</i> starting price):	90.00%	95.00%	75.00%	80.00%

Step 1: Determine which Underlying Stock is the lowest performing Underlying Stock on the relevant calculation day.

In this example, the common stock of Delta Air Lines, Inc. has the lowest performance factor and is, therefore, the lowest performing Underlying Stock on the relevant calculation day.

Step 2: Determine whether a contingent coupon payment will be paid and, if applicable, whether the securities will be automatically called on the applicable contingent coupon payment date.

Since the hypothetical stock closing price of the lowest performing Underlying Stock on the relevant calculation day is greater than or equal to its downside threshold price, you would receive a contingent coupon payment on the applicable contingent coupon payment date. In addition, if the relevant calculation day were also a call date, the securities would not be automatically called since the hypothetical stock closing price of the lowest performing Underlying Stock on such call date was less than its call threshold price.

The contingent coupon payment would be equal to \$10.58 per security, which is the product of $\$1,000 \times 12.70\%$ per annum $\times (30/360)$, rounded to the nearest cent.

PRS-21

Market Linked Securities Auto-Callable with Contingent Coupon and**Contingent Downside**

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Hypothetical Contingent Coupon Payments (Continued)

Example 2. The stock closing price of the lowest performing Underlying Stock on the relevant calculation day is less than its downside threshold price. As a result, investors do not receive a contingent coupon payment on the applicable contingent coupon payment date. In addition, if the relevant calculation day were also a call date, the securities would not be automatically called on the applicable call settlement date.

	The Common Stock of Lowe's Companies, Inc.	The Common Stock of Intel Corporation	The Common Stock of Delta Air Lines, Inc.	The Common stock of JPMorgan Chase & Co.
Hypothetical starting price:	\$100.00	\$100.00	\$100.00	\$100.00
Hypothetical stock closing price on relevant calculation day:	\$59.00	\$125.00	\$105.00	\$110.00
Hypothetical call threshold price:	\$95.00	\$95.00	\$95.00	\$95.00
Hypothetical downside threshold price:	\$60.00	\$60.00	\$60.00	\$60.00
Performance factor (stock closing price on calculation day <i>divided by</i> starting price):	59.00%	125.00%	105.00%	110.00%

Step 1: Determine which Underlying Stock is the lowest performing Underlying Stock on the relevant calculation day.

In this example, the common stock of Lowe's Companies, Inc. has the lowest performance factor and is, therefore, the lowest performing Underlying Stock on the relevant calculation day.

Step 2: Determine whether a contingent coupon payment will be paid and, if applicable, whether the securities will be automatically called on the applicable contingent coupon payment date.

Since the hypothetical stock closing price of the lowest performing Underlying Stock on the relevant calculation day is less than its downside threshold price, you would not receive a contingent coupon payment on the applicable contingent coupon payment date even though the stock closing prices of the better performing Underlying Stocks on the relevant calculation day are greater than their starting prices. In addition, if the relevant calculation day were also a call date, the securities would not be automatically called. As this example illustrates, whether you receive a contingent coupon payment and, if applicable, whether the securities are automatically called on a contingent coupon payment date will depend solely on the stock closing price of the lowest performing Underlying Stock on the relevant calculation day. The performance of the better performing Underlying Stocks is not relevant to your return on the securities.

PRS-22

Market Linked Securities Auto-Callable with Contingent Coupon and**Contingent Downside**

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Hypothetical Contingent Coupon Payments (Continued)

Example 3. The stock closing price of the lowest performing Underlying Stock on the relevant calculation day is less than its starting price but greater than or equal to its call threshold price. Assuming the relevant calculation day is also a call date, the securities would be automatically called on the applicable contingent coupon payment date (which is also the call settlement date) for the original offering price plus a final contingent coupon payment.

	The Common Stock of Lowe's Companies, Inc.	The Common Stock of Intel Corporation	The Common Stock of Delta Air Lines, Inc.	The Common stock of JPMorgan Chase & Co.
Hypothetical starting price:	\$100.00	\$100.00	\$100.00	\$100.00
Hypothetical stock closing price on relevant calculation day:	\$115.00	\$96.00	\$130.00	\$110.00
Hypothetical call threshold price:	\$95.00	\$95.00	\$95.00	\$95.00
Hypothetical downside threshold price:	\$60.00	\$60.00	\$60.00	\$60.00
Performance factor (stock closing price on calculation day <i>divided by</i> starting price):	115.00%	96.00%	130.00%	110.00%

Step 1: Determine which Underlying Stock is the lowest performing Underlying Stock on the relevant calculation day.

In this example, the common stock of Intel Corporation has the lowest performance factor and is, therefore, the lowest performing Underlying Stock on the relevant calculation day.

Step 2: Determine whether a contingent coupon payment will be paid and, if applicable, whether the securities will be automatically called on the applicable contingent coupon payment date.

Since the hypothetical stock closing price of the lowest performing Underlying Stock on the relevant calculation day (which is also a call date) is greater than or equal to its call threshold price, the securities would be automatically called and you would receive the original offering price plus a final contingent coupon payment on the applicable contingent coupon payment date, which is also referred to as the call settlement date. Even though the stock closing price of the lowest performing Underlying Stock is less than its starting price, the securities would be automatically called. On the call settlement date, you would receive \$1,010.58 per security.

If the securities are automatically called prior to maturity, you will not receive any further payments after the call settlement date.

PRS-23

Market Linked Securities Auto-Callable with Contingent Coupon and**Contingent Downside**

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Hypothetical Payment at Stated Maturity

Set forth below are three examples of calculations of the redemption amount payable at stated maturity, assuming that the securities have not been automatically called prior to stated maturity and assuming the hypothetical starting price, downside threshold price and ending prices for each Underlying Stock indicated in the examples. The terms used for purposes of these hypothetical examples do not represent any actual starting price or downside threshold price. The hypothetical starting price of \$100.00 for each Underlying Stock has been chosen for illustrative purposes only and does not represent the actual starting price for any Underlying Stock. The actual starting price, call threshold price and downside threshold price for each Underlying Stock will be determined on the pricing date and will be set forth under Terms of the Securities above. For historical data regarding the actual closing prices of the Underlying Stocks, see the historical information set forth under the sections titled Lowe's Companies, Inc., Intel Corporation, Delta Air Lines Inc. and JPMorgan Chase & Co. below. These examples are for purposes of illustration only and the values used in the examples may have been rounded for ease of analysis.

Example 1. The ending price of the lowest performing Underlying Stock on the final calculation day is greater than its starting price, the redemption amount is equal to the original offering price of your securities at maturity and you receive a final contingent coupon payment:

	The Common Stock of Lowe's Companies, Inc.	The Common Stock of Intel Corporation	The Common Stock of Delta Air Lines, Inc.	The Common stock of JPMorgan Chase & Co.
Hypothetical starting price:	\$100.00	\$100.00	\$100.00	\$100.00
Hypothetical ending price:	\$145.00	\$135.00	\$125.00	\$120.00
Hypothetical downside threshold price:	\$60.00	\$60.00	\$60.00	\$60.00
Performance factor (ending price <i>divided by</i> starting price):	145.00%	135.00%	125.00%	120.00%

Step 1: Determine which Underlying Stock is the lowest performing Underlying Stock on the final calculation day.

In this example, the common stock of JPMorgan Chase & Co. has the lowest performance factor and is, therefore, the lowest performing Underlying Stock on the final calculation day.

Step 2: Determine the redemption amount based on the ending price of the lowest performing Underlying Stock on the final calculation day.

Since the hypothetical ending price of the lowest performing Underlying Stock on the final calculation day is greater than its hypothetical downside threshold price, the redemption amount would equal the original offering price.

Although the hypothetical ending price of the lowest performing Underlying Stock on the final calculation day is significantly greater than its hypothetical starting price in this scenario, the redemption amount will not exceed the original offering price.

In addition to any contingent coupon payments received during the term of the securities, on the stated maturity date you would receive \$1,000 per security as well as a final contingent coupon payment.

PRS-24

Market Linked Securities Auto-Callable with Contingent Coupon and**Contingent Downside**

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Hypothetical Payment at Stated Maturity (Continued)

Example 2. The ending price of the lowest performing Underlying Stock on the final calculation day is less than its starting price but greater than its downside threshold price, the redemption amount is equal to the original offering price of your securities at maturity and you receive a final contingent coupon payment:

	The Common Stock of Lowe's Companies, Inc.	The Common Stock of Intel Corporation	The Common Stock of Delta Air Lines, Inc.	The Common stock of JPMorgan Chase & Co.
Hypothetical starting price:	\$100.00	\$100.00	\$100.00	\$100.00
Hypothetical ending price:	\$80.00	\$115.00	\$105.00	\$110.00
Hypothetical downside threshold price:	\$60.00	\$60.00	\$60.00	\$60.00
Performance factor (ending price <i>divided by</i> starting price):	80.00%	115.00%	105.00%	110.00%

Step 1: Determine which Underlying Stock is the lowest performing Underlying Stock on the final calculation day.

In this example, the common stock of Lowe's Companies, Inc. has the lowest performance factor and is, therefore, the lowest performing Underlying Stock on the final calculation day.

Step 2: Determine the redemption amount based on the ending price of the lowest performing Underlying Stock on the final calculation day.

Since the hypothetical ending price of the lowest performing Underlying Stock is less than its hypothetical starting price, but not by more than 40%, you would be repaid the original offering price of your securities at maturity.

In addition to any contingent coupon payments received during the term of the securities, on the stated maturity date you would receive \$1,000 per security as well as a final contingent coupon payment.

Market Linked Securities Auto-Callable with Contingent Coupon and**Contingent Downside**

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Hypothetical Payment at Stated Maturity (Continued)

Example 3. The ending price of the lowest performing Underlying Stock on the final calculation day is less than its downside threshold price, the redemption amount is less than the original offering price of your securities at maturity and you do not receive a final contingent coupon payment:

	The Common Stock of Lowe's Companies, Inc.	The Common Stock of Intel Corporation	The Common Stock of Delta Air Lines, Inc.	The Common stock of JPMorgan Chase & Co.
Hypothetical starting price:	\$100.00	\$100.00	\$100.00	\$100.00
Hypothetical ending price:	\$120.00	\$45.00	\$90.00	\$105.00
Hypothetical downside threshold price:	\$60.00	\$60.00	\$60.00	\$60.00
Performance factor (ending price <i>divided by</i> starting price):	120.00%	45.00%	90.00%	105.00%

Step 1: Determine which Underlying Stock is the lowest performing Underlying Stock on the final calculation day.

In this example, the common stock of Intel Corporation has the lowest performance factor and is, therefore, the lowest performing Underlying Stock on the final calculation day.

Step 2: Determine the redemption amount based on the ending price of the lowest performing Underlying Stock on the final calculation day.

Since the hypothetical ending price of the lowest performing Underlying Stock on the final calculation day is less than its hypothetical starting price by more than 40%, you would lose a portion of the original offering price of your securities and receive the redemption amount equal to \$450.00 per security, calculated as follows:

= \$1,000 × performance factor of the lowest performing Underlying Stock on the final calculation day

= \$1,000 × 45.00%

= \$450.00

In addition to any contingent coupon payments received during the term of the securities, on the stated maturity date you would receive \$450.00 per security, but no final contingent coupon payment.

These examples illustrate that you will not participate in any appreciation of any Underlying Stock, but will be fully exposed to a decrease in the lowest performing Underlying Stock if the ending price of the lowest performing Underlying Stock on the final calculation day is less than its downside threshold price, even if the ending prices of the other Underlying Stocks have appreciated or have not declined below their respective downside threshold price.

To the extent that the starting price, downside threshold price and ending price of the lowest performing Underlying Stock differ from the values assumed above, the results indicated above would be different.

PRS-26

Market Linked Securities Auto-Callable with Contingent Coupon and

Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's

Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines,

Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Additional Terms of the Securities

Wells Fargo will issue the securities as part of a series of senior unsecured debt securities entitled Medium-Term Notes, Series K, which is more fully described in the prospectus supplement. Information included in this pricing supplement supersedes information in the prospectus supplement and prospectus to the extent that it is different from that information.

Certain Definitions

A trading day with respect to an Underlying Stock means a day, as determined by the calculation agent, on which trading is generally conducted on the principal trading market for such Underlying Stock (as determined by the calculation agent, in its sole discretion), the Chicago Mercantile Exchange and the Chicago Board Options Exchange and in the over-the-counter market for equity securities in the United States.

The closing price for one share of any Underlying Stock (or one unit of any other security for which a closing price must be determined) on any trading day means:

if such Underlying Stock (or any such other security) is listed or admitted to trading on a national securities exchange, the official closing price on such day published by the principal United States securities exchange registered under the Exchange Act on which such Underlying Stock (or any such other security) is listed or admitted to trading; or

if such Underlying Stock (or any such other security) is not listed or admitted to trading on any national securities exchange but is included in the OTC Bulletin Board Service (the OTC Bulletin Board) operated by the Financial Industry Regulatory Authority, Inc. (FINRA), the last reported sale price of the principal trading session on the OTC Bulletin Board on such day.

If such Underlying Stock (or any such other security) is listed or admitted to trading on any national securities exchange but the official closing price is not available pursuant to the preceding sentence, then the closing price for one share of such Underlying Stock (or one unit of any such other security) on any trading day will mean the last reported sale price of the principal trading session on the over-the-counter market as reported on the OTC Bulletin Board on such day.

If the official closing price or the last reported sale price, as applicable, for such Underlying Stock (or any such other security) is not available pursuant to either of the two preceding sentences, then the closing price per share for any trading day will be the mean, as determined by the calculation agent, of the bid price for such Underlying Stock (or any such other security) obtained from as many recognized dealers in such security, but not exceeding three, as will

make such bid prices available to the calculation agent. Bids of WFS or any of its affiliates may be included in the calculation of such mean, but only to the extent that any such bid is the highest of the bids obtained. The term OTC Bulletin Board Service will include any successor service thereto or, if the OTC Bulletin Board Service is discontinued and there is no successor service thereto, the OTC Reporting Facility operated by FINRA.

Calculation Agent

Wells Fargo Securities, LLC, one of our subsidiaries, will act as calculation agent for the securities and may appoint agents to assist it in the performance of its duties. Pursuant to a calculation agent agreement, we may appoint a different calculation agent without your consent and without notifying you.

The calculation agent will determine whether the securities are automatically called prior to stated maturity, the amount of the payment you receive upon automatic call or at stated maturity and the contingent coupon payments, if any. In addition, the calculation agent will, among other things:

determine whether a market disruption event has occurred;

determine the closing prices of the Underlying Stocks under certain circumstances;

determine if adjustments are required to the closing price or adjustment factor of an Underlying Stock under various circumstances; and

under certain circumstances, select a replacement stock for an Underlying Stock.

All determinations made by the calculation agent will be at the sole discretion of the calculation agent and, in the absence of manifest error, will be conclusive for all purposes and binding on us and you. The calculation agent will have no liability for its determinations.

Additional Terms of the Securities (Continued)

Market Disruption Events

A market disruption event means, with respect to an Underlying Stock, the occurrence or existence of any of the following events:

a suspension, absence or material limitation of trading in such Underlying Stock on its primary market for more than two hours of trading or during the one-half hour before the close of trading in that market, as determined by the calculation agent in its sole discretion;

a suspension, absence or material limitation of trading in option or futures contracts relating to such Underlying Stock, if available, in the primary market for those contracts for more than two hours of trading or during the one-half hour before the close of trading in that market, as determined by the calculation agent in its sole discretion;

such Underlying Stock does not trade on the New York Stock Exchange, the NASDAQ Global Select Market, the NASDAQ Global Market or what was the primary market for such Underlying Stock, as determined by the calculation agent in its sole discretion; or

any other event, if the calculation agent determines in its sole discretion that the event materially interferes with our ability or the ability of any of our affiliates to unwind all or a material portion of a hedge with respect to the securities that we or our affiliates have effected or may effect.

The following events will not be market disruption events:

a limitation on the hours or number of days of trading in such Underlying Stock in its primary market, but only if the limitation results from an announced change in the regular business hours of the relevant market; and

a decision to permanently discontinue trading in the option or futures contracts relating to such Underlying Stock.

For this purpose, a suspension, absence or material limitation of trading in the applicable market will not include any time when that market is itself closed for trading under ordinary circumstances. In contrast, a suspension, absence or material limitation of trading in the applicable market for such Underlying Stock or option or futures contracts relating to such Underlying Stock, as applicable, by reason of any of:

a price change exceeding limits set by that market;

an imbalance of orders relating to such Underlying Stock or those contracts; or

a disparity in bid and asked quotes relating to such Underlying Stock or those contracts will constitute a suspension, absence or material limitation of trading in such Underlying Stock or those contracts, as the case may be, in the applicable market.

If a market disruption event occurs or is continuing with respect to an Underlying Stock on any calculation day, then such calculation day for such Underlying Stock will be postponed to the first succeeding trading day for such Underlying Stock on which a market disruption event for such Underlying Stock has not occurred and is not continuing; however, if such first succeeding trading day has not occurred as of the eighth trading day for such Underlying Stock after the originally scheduled calculation day, that eighth trading day shall be deemed to be the calculation day for such Underlying Stock. If a calculation day has been postponed eight trading days for an Underlying Stock after the originally scheduled calculation day and a market disruption event occurs or is continuing with respect to such Underlying Stock on such eighth trading day, the calculation agent will determine the closing price of such Underlying Stock on such eighth trading day by using its good faith estimate of the closing price that would have prevailed for such Underlying Stock on such day. Notwithstanding the postponement of a calculation day for an Underlying Stock due to a market disruption event with respect to such Underlying Stock on such calculation day, the originally scheduled calculation day will remain the calculation day for any Underlying Stock not affected by a market disruption event on such day.

Adjustment Events

The adjustment factor for each Underlying Stock is initially 1.0. However, the adjustment factor for each Underlying Stock is subject to adjustment by the calculation agent as a result of the dilution and reorganization events described in this section. The adjustments described below do not cover all events that could affect the Underlying Stocks and, consequently, the value of your securities, such as a tender or exchange offer by the applicable Underlying Stock Issuer for such Underlying Stock at a premium to its market price or a tender or exchange offer made by a third party for less than all outstanding shares of such Underlying Stock. We describe the risks relating to dilution above under Risk Factors You Have Limited Antidilution Protection.

How adjustments will be made

If one of the events described below occurs with respect to an Underlying Stock and the calculation agent determines that the event has a dilutive or concentrative effect on the market price of such Underlying Stock, the calculation agent will calculate a corresponding adjustment to the adjustment factor for such Underlying Stock as the calculation agent deems appropriate to account for that dilutive or concentrative effect. For example, if an adjustment is required because of a two-for-one stock split, then the adjustment factor for such Underlying Stock will be adjusted by the calculation agent by multiplying the existing adjustment factor by a fraction whose numerator is the number of shares of such Underlying Stock outstanding immediately after the stock split and whose denominator is the number of shares of such Underlying Stock outstanding immediately prior to the stock split. Consequently, the adjustment factor for such Underlying Stock will be adjusted to double the prior adjustment factor, due to the corresponding decrease in the market price of such Underlying Stock. Adjustments will be made for events with an effective date or ex-dividend date, as applicable, from but excluding the pricing date to and including the applicable calculation day (the adjustment period).

The calculation agent will also determine the effective date of that adjustment, and the replacement of an Underlying Stock, if applicable, in the event of a consolidation or merger or certain other events in respect of the applicable Underlying Stock Issuer. Upon making any such adjustment, the calculation agent will give notice as soon as practicable to the trustee and the paying agent, stating the adjustment to the adjustment factor of such Underlying Stock. The calculation agent will not be required to make any adjustments to the adjustment factor for purposes of calculating the stock closing price for a calculation day after the close of business on the such calculation day; *provided that* any such adjustments to the adjustment factor will be taken into account for purposes of determining the stock closing price for any subsequent calculation day. In no event, however, will an antidilution adjustment to the adjustment factor of any Underlying Stock during the term of the securities be deemed to change the face amount per security.

If more than one event requiring adjustment occurs with respect to an Underlying Stock, the calculation agent will make an adjustment for each event in the order in which the events occur, and on a cumulative basis. Thus, having made an adjustment for the first event, the calculation agent will adjust the adjustment factor for such Underlying Stock for the second event, applying the required adjustment to the adjustment factor for such Underlying Stock as already adjusted for the first event, and so on for any subsequent events.

For any dilution event described below, other than a consolidation or merger, the calculation agent will not have to adjust the adjustment factor for an Underlying Stock unless the adjustment would result in a change to the adjustment factor of such Underlying Stock then in effect of at least 0.10%. The adjustment factor of such Underlying Stock

resulting from any adjustment will be rounded up or down, as appropriate, to the nearest one-hundred thousandth.

If an event requiring an antidilution adjustment occurs with respect to an Underlying Stock, the calculation agent will make the adjustment with a view to offsetting, to the extent practical, any change in your economic position relative to your securities that results solely from that event. The calculation agent may, in its sole discretion, modify the antidilution adjustments as necessary to ensure an equitable result.

The calculation agent will make all determinations with respect to antidilution adjustments, including any determination as to whether an event requiring adjustment has occurred with respect to an Underlying Stock, as to the nature of the adjustment required for such Underlying Stock and how it will be made or as to the value of any property distributed in a reorganization event, and will do so in its sole discretion. In the absence of manifest error, those determinations will be conclusive for all purposes and will be binding on you and us, without any liability on the part of the calculation agent. You will not be entitled to any compensation from us for any loss suffered as a result of any of these determinations by the calculation agent. The calculation agent will provide information about the adjustments that it makes upon your written request.

If any of the adjustments specified below is required to be made with respect to an amount or value of any cash or other property that is distributed by an Underlying Stock Issuer organized outside the United States, such amount or value will be converted to U.S. dollars, as applicable, and will be reduced by any applicable foreign withholding taxes that would apply to such distribution if such distribution were paid to a U.S. person that is eligible for the benefits of an applicable income tax treaty, if any, between the United States and the jurisdiction of organization of such Underlying Stock Issuer, as determined by the calculation agent, in its sole discretion.

No adjustments will be made for certain other events, such as offerings of common stock by an Underlying Stock Issuer for cash or in connection with the occurrence of a partial tender or exchange offer for an Underlying Stock by the Underlying Stock Issuer of such Underlying Stock or any other person.

Market Linked Securities Auto-Callable with Contingent Coupon and

Contingent Downside

Stock Splits and Reverse Stock Splits

A stock split is an increase in the number of a corporation's outstanding shares of stock without any change in its stockholders' equity. Each outstanding share will be worth less as a result of a stock split.

A reverse stock split is a decrease in the number of a corporation's outstanding shares of stock without any change in its stockholders' equity. Each outstanding share will be worth more as a result of a reverse stock split.

If an Underlying Stock is subject to a stock split or a reverse stock split, then once the split has become effective the calculation agent will adjust the adjustment factor for such Underlying Stock to equal the product of the prior adjustment factor of such Underlying Stock and the number of shares issued in such stock split or reverse stock split with respect to one share of such Underlying Stock.

Stock Dividends

In a stock dividend, a corporation issues additional shares of its stock to all holders of its outstanding stock in proportion to the shares they own. Each outstanding share will be worth less as a result of a stock dividend.

If an Underlying Stock is subject to a stock dividend payable in shares of such Underlying Stock that is given ratably to all holders of shares of such Underlying Stock, then once the dividend has become effective the calculation agent will adjust the adjustment factor for such Underlying Stock on the ex-dividend date to equal the sum of the prior adjustment factor for such Underlying Stock and the product of:

the number of shares issued with respect to one share of such Underlying Stock, and

the prior adjustment factor for such Underlying Stock.

The ex-dividend date for any dividend or other distribution is the first day on and after which such Underlying Stock trades without the right to receive that dividend or distribution.

No Adjustments for Other Dividends and Distributions

The adjustment factor for an Underlying Stock will not be adjusted to reflect dividends, including cash dividends, or other distributions paid with respect to such Underlying Stock, other than:

stock dividends described above,

issuances of transferable rights and warrants as described in Transferable Rights and Warrants below,

distributions that are spin-off events described in Reorganization Events below, and

extraordinary dividends described below.

An extraordinary dividend means each of (a) the full amount per share of an Underlying Stock of any cash dividend or special dividend or distribution that is identified by the applicable Underlying Stock Issuer as an extraordinary or special dividend or distribution, (b) the excess of any cash dividend or other cash distribution (that is not otherwise identified by the applicable Underlying Stock Issuer as an extraordinary or special dividend or distribution) distributed per share of such Underlying Stock over the immediately preceding cash dividend or other cash distribution, if any, per share of such Underlying Stock that did not include an extraordinary or special dividend (as adjusted for any subsequent corporate event requiring an adjustment as described in this section, such as a stock split or reverse stock split) if such excess portion of the dividend or distribution is more than 5.00% of the closing price of such Underlying Stock on the trading day preceding the ex-dividend date for the payment of such cash dividend or other cash distribution (such closing price, the extraordinary dividend base closing price) and (c) the full cash value of any non-cash dividend or distribution per share of such Underlying Stock (excluding marketable securities, as defined below).

If an Underlying Stock is subject to an extraordinary dividend, then once the extraordinary dividend has become effective the calculation agent will adjust the adjustment factor for such Underlying Stock on the ex-dividend date to equal the product of:

the prior adjustment factor for such Underlying Stock, and

a fraction, the numerator of which is the extraordinary dividend base closing price of such Underlying Stock on the trading day preceding the ex-dividend date and the denominator of which is the amount by which the extraordinary dividend base closing price of such Underlying Stock on the trading day preceding the ex dividend date exceeds the extraordinary dividend.

Market Linked Securities Auto-Callable with Contingent Coupon and

Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Additional Terms of the Securities (Continued)

Notwithstanding anything herein, the initiation by an Underlying Stock Issuer of an ordinary dividend on such Underlying Stock or any announced increase in the ordinary dividend on such Underlying Stock will not constitute an extraordinary dividend requiring an adjustment.

To the extent an extraordinary dividend is not paid in cash or is paid in a currency other than U.S. dollars, the value of the non-cash component or non-U.S. currency will be determined by the calculation agent, in its sole discretion. A distribution on an Underlying Stock that is a dividend payable in shares of such Underlying Stock, an issuance of rights or warrants or a spin-off event and also an extraordinary dividend will result in an adjustment to the number of shares of such Underlying Stock only as described in *Stock Dividends* above, *Transferable Rights and Warrants* below or *Reorganization Events* below, as the case may be, and not as described here.

Transferable Rights and Warrants

If an Underlying Stock Issuer issues transferable rights or warrants to all holders of such Underlying Stock to subscribe for or purchase such Underlying Stock at an exercise price per share that is less than the closing price of such Underlying Stock on the trading day before the ex-dividend date for the issuance, then the adjustment factor for such Underlying Stock will be adjusted to equal the product of:

the prior adjustment factor for such Underlying Stock, and

a fraction, (1) the numerator of which will be the number of shares of such Underlying Stock outstanding at the close of trading on the trading day before the ex-dividend date (as adjusted for any subsequent event requiring an adjustment hereunder) plus the number of additional shares of such Underlying Stock offered for subscription or purchase pursuant to the rights or warrants and (2) the denominator of which will be the number of shares of such Underlying Stock outstanding at the close of trading on the trading day before the ex-dividend date (as adjusted for any subsequent event requiring an adjustment hereunder) plus the number of additional shares of such Underlying Stock (referred to herein as the additional shares) that the aggregate offering price of the total number of shares of such Underlying Stock so offered for subscription or purchase pursuant to the rights or warrants would purchase at the closing price on the trading day before the ex-dividend date for the issuance.

The number of additional shares will be equal to:

the product of (1) the total number of additional shares of such Underlying Stock offered for subscription or purchase pursuant to the rights or warrants and (2) the exercise price of the rights or warrants, divided by

the closing price of such Underlying Stock on the trading day before the ex-dividend date for the issuance. If the number of shares of such Underlying Stock actually delivered in respect of the rights or warrants differs from the number of shares of such Underlying Stock offered in respect of the rights or warrants, then the adjustment factor for such Underlying Stock will promptly be readjusted to the adjustment factor for such Underlying Stock that would have been in effect had the adjustment been made on the basis of the number of shares of such Underlying Stock actually delivered in respect of the rights or warrants.

Reorganization Events

Each of the following is a reorganization event with respect to an Underlying Stock:

such Underlying Stock is reclassified or changed (other than in a stock split or reverse stock split),

the applicable Underlying Stock Issuer has been subject to a merger, consolidation or other combination and either is not the surviving entity or is the surviving entity but all outstanding shares of such Underlying Stock are exchanged for or converted into other property,

a statutory share exchange involving outstanding shares of such Underlying Stock and the securities of another entity occurs, other than as part of an event described above,

the applicable Underlying Stock Issuer sells or otherwise transfers its property and assets as an entirety or substantially as an entirety to another entity,

the applicable Underlying Stock Issuer effects a spin-off, other than as part of an event described above (in a spin-off, a corporation issues to all holders of its common stock equity securities of another issuer), or

Additional Terms of the Securities (Continued)

the applicable Underlying Stock Issuer is liquidated, dissolved or wound up or is subject to a proceeding under any applicable bankruptcy, insolvency or other similar law, or another entity completes a tender or exchange offer for all the outstanding shares of such Underlying Stock.

Adjustments for Reorganization Events

If a reorganization event occurs with respect to an Underlying Stock, then the calculation agent will adjust the adjustment factor for such Underlying Stock to reflect the amount and type of property or properties whether cash, securities, other property or a combination thereof that a holder of one share of such Underlying Stock would have been entitled to receive in relation to the reorganization event. We refer to this new property as the reorganization property.

Reorganization property can be classified into two categories:

an equity security listed on a national securities exchange, which we refer to generally as a marketable security and, in connection with a particular reorganization event, new stock, which may include any tracking stock, any stock received in a spin-off (spin-off stock) or any marketable security received in exchange for the applicable Underlying Stock; and

cash and any other property, assets or securities other than marketable securities (including equity securities that are not listed, that are traded over the counter or that are listed on a non-U.S. securities exchange), which we refer to as non-stock reorganization property.

For the purpose of making an adjustment required by a reorganization event, the calculation agent, in its sole discretion, will determine the value of each type of the reorganization property. For purposes of valuing any new stock, the calculation agent will use the closing price of the security on the relevant trading day. The calculation agent will value non-stock reorganization property in any manner it determines, in its sole discretion, to be appropriate. In connection with a reorganization event in which reorganization property includes new stock, for the purpose of determining the adjustment factor for any new stock as described below, the term new stock reorganization ratio means the product of (i) the number of shares of the new stock received with respect to one share of such Underlying Stock and (ii) the adjustment factor for the applicable Underlying Stock on the trading day immediately prior to the effective date of the reorganization event.

If a holder of shares of the applicable Underlying Stock may elect to receive different types or combinations of types of reorganization property in the reorganization event, the reorganization property will consist of the types and amounts of each type distributed to a holder of shares of such Underlying Stock that makes no election, as determined by the calculation agent in its sole discretion.

If any reorganization event occurs with respect to an Underlying Stock, then on and after the effective date for such reorganization event (or, if applicable, in the case of spinoff stock, the ex-dividend date for the distribution of such spinoff stock) the term Underlying Stock in this pricing supplement will be deemed to mean the following with respect to such Underlying Stock, and for each share of such Underlying Stock, new stock and/or replacement stock so deemed to constitute such Underlying Stock, the adjustment factor for such Underlying Stock will be equal to the applicable number indicated:

(a) if such Underlying Stock continues to be outstanding:

(1) that Underlying Stock (if applicable, as reclassified upon the issuance of any tracking stock) at the adjustment factor for such Underlying Stock in effect on the trading day immediately prior to the effective date of the reorganization event; and

(2) if the reorganization property includes new stock, a number of shares of new stock equal to the new stock reorganization ratio;

provided that, if any non-stock reorganization property is received in the reorganization event, the results of (a)(1) and (a)(2) above will each be multiplied by the gross-up multiplier, which will be equal to a fraction, the numerator of which is the closing price of the original Underlying Stock on the trading day immediately prior to the effective date of the reorganization event and the denominator of which is the amount by which such closing price of the original Underlying Stock exceeds the value of the non-stock reorganization property received per share of such Underlying Stock as determined by the calculation agent as of the close of trading on such trading day; or

(b) if such Underlying Stock is surrendered for reorganization property:

(1) that includes new stock, a number of shares of new stock equal to the new stock reorganization ratio; *provided* that, if any non-stock reorganization property is received in the reorganization event, such number will be multiplied by the gross-up multiplier; or

Market Linked Securities Auto-Callable with Contingent Coupon and

Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Additional Terms of the Securities (Continued)

- (2) that consists exclusively of non-stock reorganization property:
- (i) if the surviving entity has marketable securities outstanding following the reorganization event and either (A) such marketable securities were in existence prior to such reorganization event or (B) such marketable securities were exchanged for previously outstanding marketable securities of the surviving entity or its predecessor (predecessor stock) in connection with such reorganization event (in either case of (A) or (B), the successor stock), a number of shares of the successor stock determined by the calculation agent on the trading day immediately prior to the effective date of such reorganization event equal to the adjustment factor for such Underlying Stock in effect on the trading day immediately prior to the effective date of such reorganization event multiplied by a fraction, the numerator of which is the value of the non-stock reorganization property per share of such Underlying Stock on such trading day and the denominator of which is the closing price of the successor stock on such trading day (or, in the case of predecessor stock, the closing price of the predecessor stock multiplied by the number of shares of the successor stock received with respect to one share of the predecessor stock); or
 - (ii) if the surviving entity does not have marketable securities outstanding, or if there is no surviving entity (in each case, a replacement stock event), a number of shares of replacement stock (selected as defined below) with an aggregate value on the effective date of such reorganization event equal to the value of the non-stock reorganization property multiplied by the adjustment factor for such Underlying Stock in effect on the trading day immediately prior to the effective date of such reorganization event.

If a reorganization event occurs with respect to the shares of an Underlying Stock and the calculation agent adjusts the adjustment factor of such Underlying Stock to reflect the reorganization property in the event as described above, the calculation agent will make further antidilution adjustments for any later events that affect the reorganization property, or any component of the reorganization property, comprising the new adjustment factor of such Underlying Stock. The calculation agent will do so to the same extent that it would make adjustments if the shares of such Underlying Stock were outstanding and were affected by the same kinds of events. If a subsequent reorganization event affects only a particular component of the number of shares of such Underlying Stock, the required adjustment will be made with respect to that component as if it alone were the number of shares of such Underlying Stock.

For purposes of adjustments for reorganization events, in the case of a consummated tender or exchange offer or going-private transaction involving reorganization property of a particular type, reorganization property will be

deemed to include the amount of cash or other property paid by the offeror in the tender or exchange offer with respect to such reorganization property (in an amount determined on the basis of the rate of exchange in such tender or exchange offer or going-private transaction). In the event of a tender or exchange offer or a going-private transaction with respect to reorganization property in which an offeree may elect to receive cash or other property, reorganization property will be deemed to include the kind and amount of cash and other property received by offerees who elect to receive cash.

Replacement Stock Events

Following the occurrence of a replacement stock event described in paragraph (b)(2)(ii) above or in Delisting of American Depositary Shares or Termination of American Depositary Receipt Facility below with respect to an Underlying Stock, the stock closing price of the applicable underlying stock on any calculation day on or after the effective date of the replacement stock event will be determined by reference to a replacement stock and an adjustment factor (subject to any further anti-dilution adjustments) for such replacement stock as determined in accordance with the following paragraphs.

The replacement stock will be the stock having the closest option period volatility to the applicable original Underlying Stock among the stocks that then comprise the replacement stock selection index (or, if publication of such index is discontinued, any successor or substitute index selected by the calculation agent in its sole discretion) with the same GICS Code (as defined below) as the applicable original Underlying Stock Issuer; provided, however, that a replacement stock will not include (i) any stock that is subject to a trading restriction under the trading restriction policies of Wells Fargo, the hedging counterparties of Wells Fargo or any of their affiliates that would materially limit the ability of Wells Fargo, the hedging counterparties of Wells Fargo or any of their affiliates to hedge the securities with respect to such stock or (ii) any stock for which the aggregate number of shares to be referenced by the securities (equal to the product of (a) (i) \$100 *divided by* (ii) the starting price of the applicable Underlying Stock, (b) the adjustment factor that would be in effect immediately after selection of such stock as the replacement stock and (c) (i) the aggregate face amount outstanding *divided by* (ii) \$1,000) exceeds 25% of the ADTV (as defined in Rule 100(b) of Regulation M under the Exchange Act) for such stock as of the effective date of the replacement stock event (an excess ADTV stock).

Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of Lowe's Companies, Inc., the Common Stock of Intel Corporation, the Common Stock of Delta Air Lines, Inc. and the Common Stock of JPMorgan Chase & Co. due December 24, 2020

Additional Terms of the Securities (Continued)

If a replacement stock is selected in connection with a reorganization event for an original Underlying Stock, the adjustment factor with respect to such replacement stock will be equal to the number of shares of such replacement stock with an aggregate value, based on the closing price on the effective date of such reorganization event, equal to the product of (a) the value of the non stock reorganization property received per share of such original Underlying Stock and (b) the adjustment factor of such Underlying Stock in effect on the trading day immediately prior to the effective date of such reorganization event. If a replacement stock is selected in connection with an ADS termination event (as defined below), the adjustment factor with respect to such replacement stock will be equal to the number of shares of such replacement stock with an aggregate value, based on the closing price on the change date (as defined below), equal to the product of (x) the closing price of the original Underlying Stock on the change date and (y) the adjustment factor in effect on the trading day immediately prior to the change date.

The option period volatility means, in respect of any trading day, the volatility (calculated by referring to the closing price of the applicable Underlying Stock on its primary exchange) for a period equal to the 125 trading days immediately preceding the announcement date of the reorganization event, as determined by the calculation agent.

GICS Code means the Global Industry Classification Standard (GICS) sub-industry code assigned to the applicable Underlying Stock Issuer; provided, however, if (i) there is no other stock in the replacement stock selection index in the same GICS sub-industry or (ii) a replacement stock (a) for which there is no trading restriction and (b) that is not an excess ADTV stock cannot be identified from the replacement stock selection index in the same GICS sub-industry, the GICS Code will mean the GICS industry code assigned to such original Underlying Stock Issuer. If no GICS Code has been assigned to such original Underlying Stock Issuer, the applicable GICS Code will be determined by the calculation agent to be the GICS sub-industry code assigned to companies in the same sub-industry (or, subject to the proviso in the preceding sentence, industry, as applicable) as such original Underlying Stock Issuer at the time of the relevant replacement stock event.

The replacement stock selection index means the S&P 500 Index.

Delisting of American Depositary Shares or Termination of American Depositary Receipt Facility. If an Underlying Stock is an American Depositary Share and such Underlying Stock is no longer listed or admitted to trading on a U.S. securities exchange registered under the Exchange Act or included in the OTC Bulletin Board Service operated by FINRA, or if the American depositary receipt facility between the applicable Underlying Stock Issuer and the depositary is terminated for any reason (each, an ADS termination event), then, on the last trading day on which the applicable Underlying Stock is listed or admitted to trading or the last trading day immediately prior to the date of such termination, as applicable (the change date), a replacement stock event shall be deemed to occur.

Events of Default and Acceleration

If an event of default with respect to the securities has occurred and is continuing, the amount payable to a holder of a security upon any acceleration permitted by the securities, with respect to each security, will be equal to the redemption amount, calculated as provided herein, plus a portion of a final contingent coupon payment, if any. The redemption amount and any final contingent coupon payment will be calculated as though the date of acceleration were the final calculation day. The final contingent coupon payment, if any, will be prorated from and including the immediately preceding contingent coupon payment date to but excluding the date of acceleration.

Information About The Underlying Stocks

Each Underlying Stock is registered under the Exchange Act. Companies with securities registered under the Exchange Act are required to file periodically financial and other information specified by the SEC. Information filed with the SEC can be inspected and copied at the Public Reference Room, 100 F Street, NE, Washington, DC 20549. Copies of this material can also be obtained from the Office of Investor Education and Advocacy of the SEC, at prescribed rates. In addition, information filed by each Underlying Stock Issuer with the SEC electronically can be reviewed through a website maintained by the SEC. The address of the SEC's website is <http://www.sec.gov>. Information filed with the SEC by each Underlying Stock Issuer under the Exchange Act can be located by reference to its applicable SEC file number (as set forth below). Information about an Underlying Stock may also be obtained from other sources such as press releases, newspaper articles and other publicly disseminated documents, as well as from the applicable Underlying Stock Issuer's website. None of such publicly available information is incorporated by reference into this pricing supplement.

This pricing supplement relates only to the securities offered hereby and does not relate to the Underlying Stocks or other securities of the Underlying Stock Issuers. In connection with the issuance of the securities, neither we nor the agent has participated in the preparation of any Underlying Stock Issuer's public filings or made any due diligence inquiry with respect to any Underlying Stock Issuer. Furthermore, we cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of such public filings or other publicly available information) that would affect the price of any Underlying Stock (and therefore the price of such common stock at the time we priced the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning any Underlying Stock Issuer could affect any payments on the securities.

The Underlying Stock Issuers are not involved in this offering of securities in any way and will have no obligation of any kind with respect to the securities. We, the agent and our affiliates may at present, or from time to time in the future, engage in business with an Underlying Stock Issuer, including extending loans to (and exercising creditors remedies with respect to such loans), or making equity investments in, an Underlying Stock Issuer, and in the course of such business, we, the agent or our affiliates may have obtained or may in the future obtain material non-public information regarding an Underlying Stock Issuer, or any affiliate of an Underlying Stock Issuer, and none of we, the agent or any such affiliate undertakes to disclose any such information to purchasers of the securities. We, the agent and our affiliates from time to time may publish research reports with respect to an Underlying Stock. Such research reports may or may not recommend that investors buy or hold any Underlying Stock. We, the agent and our affiliates do not undertake to inform purchasers of the securities of any changes (positive or negative) to the recommendations contained in future research reports.
