United States Short Oil Fund, LP

Notes to Condensed Financial Statements

For the period ended March 31, 2015 (Unaudited)

NOTE 1 — ORGANIZATION AND BUSINESS

The United States Short Oil Fund, LP (“DNO”) was organized as a limited partnership under the laws of the state of Delaware on June 30, 2008. DNO is a commodity pool that issues limited partnership shares (“shares”) that may be purchased and sold on the NYSE Arca, Inc. (the “NYSE Arca”). DNO will continue in perpetuity, unless terminated sooner upon the occurrence of one or more events as described in its Second Amended and Restated Agreement of Limited Partnership dated as of March 1, 2013 (the “LP Agreement”). The investment objective of DNO is for the daily changes in percentage terms of its shares’ per share net asset value (“NAV”) to inversely reflect the daily changes in percentage terms of the spot price of West Texas Intermediate (“WTI”) light, sweet crude oil delivered to Cushing, Oklahoma, as measured by the daily changes in the price of the futures contract for WTI light, sweet crude oil traded on the New York Mercantile Exchange (the “NYMEX”) that is the near month contract to expire, except when the near month contract is within two weeks of expiration, in which case the futures contract will be the next month contract to expire (the “Benchmark Futures Contract”), less DNO’s expenses. It is not the intent of DNO to be operated in a fashion such that the per share NAV will equal, in dollar terms, the inverse of the spot price of WTI light, sweet crude oil or any particular futures contract based on WTI light, sweet crude oil. It is not the intent of DNO to be operated in a fashion such that its per share NAV will reflect the inverse of the percentage change of the price of any particular futures contract as measured over a time period greater than one day. United States Commodity Funds LLC (“USCF”), the general partner of DNO, believes that it is not practical to manage the portfolio to achieve such an investment goal when investing in short positions in Futures Contracts (as defined below) and Other Crude Oil-Related Investments (as defined below). DNO accomplishes its objective through investments in short positions in futures contracts for WTI light, sweet crude oil and other types of crude oil, diesel-heating oil, gasoline, natural gas and other petroleum-based fuels that are traded on the NYMEX, ICE Futures Exchange (“ICE Futures”) or other U.S. and foreign exchanges (collectively, “Futures Contracts”) and other oil-related investments such as cash-settled options on Futures Contracts, forward contracts for oil, cleared swap contracts and over-the-counter (“OTC”) transactions that are based on the price of crude oil, diesel-heating oil, gasoline, natural gas and other petroleum-based fuels, Futures Contracts and indices based on the foregoing (collectively, “Other Crude Oil-Related Investments”). As of March 31, 2015, DNO held short positions in 324 WTI Crude Oil Futures CL Contracts traded on the NYMEX and did not hold short positions on the ICE Futures.

DNO commenced investment operations on September 24, 2009 and has a fiscal year ending on December 31. USCF is responsible for the management of DNO. USCF is a member of the National Futures Association (the “NFA”) and became a commodity pool operator registered with the Commodity Futures Trading Commission (the “CFTC”) effective December 1, 2005 and a swaps firm on August 8, 2013. USCF is also the general partner of the United States Oil Fund, LP (“USO”), the United States Natural Gas Fund, LP (“UNG”), the United States 12 Month Oil Fund, LP (“USL”), the United States Gasoline Fund, LP (“UGA”) and the United States Diesel-Heating Oil Fund, LP (“UHN”), which listed their limited partnership shares on the American Stock Exchange (the “AMEX”) under the ticker symbols “USO” on April

10, 2006, “UNG” on April 18, 2007, “USL” on December 6, 2007, “UGA” on February 26, 2008 and “UHN” on April 9, 2008 respectively. As a result of the acquisition of the AMEX by NYSE Euronext, each of USO’s, UNG’s, USL’s, UGA’s and UHN’s shares commenced trading on the NYSE Arca on November 25, 2008. USCF is also the general partner of the United States 12 Month Natural Gas Fund, LP (“UNL”) and the United States Brent Oil Fund, LP (“BNO”), which listed their limited partnership shares on the NYSE Arca under the ticker symbols “UNL” on November 18, 2009 and “BNO” on June 2, 2010, respectively. USCF is also the sponsor of the United States Commodity Index Fund (“USCI”), the United States Copper Index Fund (“CPER”) and the United States Agriculture Index Fund (“USAG”), each a series of the United States Commodity Index Funds Trust. USCI, CPER and USAG listed their shares on the NYSE Arca under the ticker symbol “USCI” on August 10, 2010, “CPER” on November 15, 2011 and “USAG” on April 13, 2012, respectively. All funds listed previously are referred to collectively herein as the “Related Public Funds.”

DNO issues shares to certain authorized purchasers (“Authorized Participants”) by offering baskets consisting of 50,000 shares (“Creation Baskets”) through ALPS Distributors, Inc., as the marketing agent (the “Marketing Agent”). The purchase price for a Creation Basket is based upon the NAV of a share calculated shortly after the close of the core trading session on the NYSE Arca on the day the order to create the basket is properly received.

The applicable transaction fee paid by Authorized Participants is \$350 to DNO for each order they place to create one or more Creation Baskets or to redeem one or more baskets (“Redemption Baskets”). Shares may be purchased or sold on a nationally recognized securities exchange in smaller increments than a Creation Basket or Redemption Basket. Shares purchased or sold on a nationally recognized securities exchange are not purchased or sold at the per share NAV of DNO but rather at market prices quoted on such exchange.

In September 2009, DNO initially registered 25,000,000 shares on Form S-1 with the U.S. Securities and Exchange Commission (the “SEC”). On September 24, 2009, DNO listed its shares on the NYSE Arca under the ticker symbol “DNO”. On that day, DNO established its initial per share NAV by setting the price at \$50 and issued 200,000 shares in exchange for \$10,000,000. DNO also commenced investment operations on September 24, 2009, by taking short positions in Futures Contracts traded on the NYMEX based on WTI light, sweet crude oil. As of March 31, 2015, DNO had registered a total of 25,000,000 shares.

The accompanying unaudited condensed financial statements have been prepared in accordance with Rule 10-01 of Regulation S-X promulgated by the SEC and, therefore, do not include all information and footnote disclosure required under generally accepted accounting principles (“GAAP”) in the United States of America. The financial information included herein is unaudited; however, such financial information reflects all adjustments, consisting only of normal recurring adjustments, which are, in the opinion of USCF, necessary for the fair presentation of the condensed financial statements for the interim period.

NOTE 2 — SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Basis of Presentation

The financial statements have been prepared in conformity with GAAP as detailed in the Financial Accounting Standards Board’s (“FASB”) Accounting Standards Codification. DNO is an investment company and follows the accounting and reporting guidance in FASB Topic 946.

Revenue Recognition

Commodity futures contracts, forward contracts, physical commodities and related options are recorded on the trade date. All such transactions are recorded on the identified cost basis and marked to market daily. Unrealized gains or losses on open contracts are reflected in the condensed statements of financial condition and represent the difference between the original contract amount and the market value (as determined by exchange settlement prices for futures contracts and related options and cash dealer prices at a predetermined time for forward contracts, physical commodities, and their related options) as of the last business day of the year or as of the last date of the condensed financial statements. Changes in the unrealized gains or losses between periods are reflected in the condensed statements of operations. DNO earns interest on its assets denominated in U.S. dollars on deposit with the futures commission merchant (“FCM”) at the 90-day Treasury bill rate. In addition, DNO earns income on funds held at the custodian or FCM at prevailing market rates earned on such investments.

Brokerage Commissions

Brokerage commissions on all open commodity futures contracts are accrued on a full-turn basis.

Income Taxes

DNO is not subject to federal income taxes; each partner reports his/her allocable share of income, gain, loss deductions or credits on his/her own income tax return.

In accordance with GAAP, DNO is required to determine whether a tax position is more likely than not to be sustained upon examination by the applicable taxing authority, including resolution of any tax related appeals or litigation processes, based on the technical merits of the position. DNO files an income tax return in the U.S. federal jurisdiction, and may file income tax returns in various U.S. states. DNO is not subject to income tax return examinations by major taxing authorities for years before 2011. The tax benefit recognized is measured as the largest amount of benefit that has a greater than fifty percent likelihood of being realized upon ultimate settlement. De-recognition of a tax benefit previously recognized results in DNO recording a tax liability that reduces net assets. However, DNO's conclusions regarding this policy may be subject to review and adjustment at a later date based on factors including, but not limited to, on-going analysis of and changes to tax laws, regulations and interpretations thereof. DNO recognizes interest accrued related to unrecognized tax benefits and penalties related to unrecognized tax benefits in income tax fees payable, if assessed. No interest expense or penalties have been recognized as of and for the period ended March 31, 2015.

Creations and Redemptions

Authorized Participants may purchase Creation Baskets or redeem Redemption Baskets only in blocks of 50,000 shares at a price equal to the NAV of the shares calculated shortly after the close of the core trading session on the NYSE Arca on the day the order is placed.

DNO receives or pays the proceeds from shares sold or redeemed within three business days after the trade date of the purchase or redemption. The amounts due from Authorized Participants are reflected in DNO's condensed statements of financial condition as receivable for shares sold, and amounts payable to Authorized Participants upon redemption are reflected as payable for shares redeemed.

Authorized Participants pay DNO a fee of \$350 for each order placed to create one or more Creation Baskets or to redeem one or more Redemption Baskets.

Partnership Capital and Allocation of Partnership Income and Losses

Profit or loss shall be allocated among the partners of DNO in proportion to the number of shares each partner holds as of the close of each month. USCF may revise, alter or otherwise modify this method of allocation as described in the LP Agreement.

Calculation of Per Share Net Asset Value (“NAV”)

DNO’s per share NAV is calculated on each NYSE Arca trading day by taking the current market value of its total assets, subtracting any liabilities and dividing that amount by the total number of shares outstanding. DNO uses the closing price for the contracts on the relevant exchange on that day to determine the value of contracts held on such exchange.

Net Income (Loss) Per Share

Net income (loss) per share is the difference between the per share NAV at the beginning of each period and at the end of each period. The weighted average number of shares outstanding was computed for purposes of disclosing net income (loss) per weighted average share. The weighted average shares are equal to the number of shares outstanding at the end of the period, adjusted proportionately for shares added and redeemed based on the amount of time the shares were outstanding during such period. There were no shares held by USCF at March 31, 2015.

Offering Costs

Offering costs incurred in connection with the registration of additional shares after the initial registration of shares are borne by DNO. These costs include registration fees paid to regulatory agencies and all legal, accounting, printing and other expenses associated with such offerings. These costs are accounted for as a deferred charge and thereafter amortized to expense over twelve months on a straight-line basis or a shorter period if warranted.

Cash Equivalents

Cash equivalents include money market funds and overnight deposits or time deposits with original maturity dates of three months or less.

Reclassification

Certain amounts in the accompanying condensed financial statements were reclassified to conform to the current presentation.

Use of Estimates

The preparation of condensed financial statements in conformity with GAAP requires USCF to make estimates and assumptions that affect the reported amount of assets and liabilities and disclosure of contingent assets and liabilities at the date of the condensed financial statements, and the reported amounts of the revenue and expenses during the reporting period. Actual results may differ from those estimates and assumptions.

NOTE 3 — FEES PAID BY THE FUND AND RELATED PARTY TRANSACTIONS

USCF Management Fee

Under the LP Agreement, USCF is responsible for investing the assets of DNO in accordance with the objectives and policies of DNO. In addition, USCF has arranged for one or more third parties to provide administrative, custody, accounting, transfer agency and other necessary services to DNO. For these services, DNO is contractually obligated to pay USCF a fee, which is paid monthly, equal to 0.60% per annum of average daily total net assets.

Ongoing Registration Fees and Other Offering Expenses

DNO pays all costs and expenses associated with the ongoing registration of its shares subsequent to the initial offering. These costs include registration or other fees paid to regulatory agencies in connection with the offer and sale of shares, and all legal, accounting, printing and other expenses associated with such offer and sale. For the three

months ended March 31, 2015 and 2014, DNO did not incur any registration fees or other offering expenses.

Directors' Fees and Expenses

DNO is responsible for paying its portion of the directors' and officers' liability insurance for DNO and the Related Public Funds and the fees and expenses of the independent directors who also serve as audit committee members of DNO and the Related Public Funds. DNO shares the fees and expenses on a pro rata basis with each Related Public Fund, as described above, based on the relative assets of each Related Public Fund computed on a daily basis. These fees and expenses for the year ending December 31, 2015 are estimated to be a total of \$2,545 for DNO and \$560,625 for DNO and the Related Public Funds.

Licensing Fees

DNO and the Related Public Funds, other than BNO, USCI, CPER and USAG, pay a licensing fee that is equal to 0.015% on all net assets. During the three months ended March 31, 2015 and 2014, DNO incurred \$533 and \$409, respectively, under this arrangement.

Investor Tax Reporting Cost

The fees and expenses associated with DNO's audit expenses and tax accounting and reporting requirements are paid by DNO. These costs are estimated to be \$68,000 for the year ending December 31, 2015.

Other Expenses and Fees and Expense Waivers

In addition to the fees described above, DNO pays all brokerage fees and other expenses in connection with the operation of DNO, excluding costs and expenses paid by USCF as outlined in *Note 4 – Contracts and Agreements* below. USCF has voluntarily agreed to pay certain expenses normally borne by DNO to the extent that such expenses exceed 0.15% (15 basis points) of DNO's NAV, on an annualized basis, through at least June 30, 2015. USCF has no obligation to continue such payments into subsequent periods. For the three months ended March 31, 2015, USCF waived \$21,797 of DNO's expenses. This voluntary expense waiver is in addition to those amounts USCF is contractually obligated to pay as described in *Note 4 – Contracts and Agreements*.

NOTE 4 — CONTRACTS AND AGREEMENTS

DNO is party to a marketing agent agreement, dated as of June 8, 2009, as amended from time to time, with the Marketing Agent and USCF, whereby the Marketing Agent provides certain marketing services for DNO as outlined in the agreement. The fee of the Marketing Agent, which is borne by USCF, is equal to 0.06% on DNO's assets up to \$3 billion; and 0.04% on DNO's assets in excess of \$3 billion. In no event may the aggregate compensation paid to the Marketing Agent and any affiliate of USCF for distribution related services exceed 10% of the gross proceeds of DNO's offering.

The above fee does not include website construction and development, which are borne by USCF.

DNO is also party to a custodian agreement, dated October 7, 2008, as amended from time to time, with Brown Brothers Harriman & Co. ("BBH&Co.") and USCF, whereby BBH&Co. holds investments on behalf of DNO. USCF pays the fees of the custodian, which are determined by the parties from time to time. In addition, DNO is party to an administrative agency agreement, dated October 7, 2008, as amended from time to time, with USCF and BBH&Co., whereby BBH&Co. acts as the administrative agent, transfer agent and registrar for DNO. USCF also pays the fees of BBH&Co. for its services under such agreement and such fees are determined by the parties from time to time.

Currently, USCF pays BBH&Co. for its services, in the foregoing capacities, a minimum amount of \$75,000 annually for its custody, fund accounting and fund administration services rendered to DNO and each of the Related Public Funds, as well as a \$20,000 annual fee for its transfer agency services. In addition, USCF pays BBH&Co. an asset-based charge of: (a) 0.06% for the first \$500 million of the Related Public Funds' combined net assets, (b) 0.0465% for the Related Public Funds' combined net assets greater than \$500 million but less than \$1 billion, and (c) 0.035% the Related Public Funds' combined net assets exceed \$1 billion. The annual minimum amount will not apply if the asset-based charge for all accounts in the aggregate exceeds \$75,000. USCF also pays transaction fees ranging from \$7 to \$15 per transaction.

On October 8, 2013, DNO entered into a brokerage agreement with RBC Capital Markets, LLC ("RBC Capital" or "RBC") to serve as DNO's FCM, effective October 10, 2013. Prior to October 10, 2013, the FCM was UBS Securities LLC. The agreement with RBC requires it to provide services to DNO in connection with the purchase and sale of Futures Contracts and Other Crude Oil-Related Investments that may be purchased and sold by or through RBC Capital and/or UBS Securities for DNO's account. In accordance with the agreement, RBC Capital charges DNO commissions of approximately \$7 to \$15 per round-turn trade, including applicable exchange and NFA fees for Futures Contracts and options on Futures Contracts. Such fees include those incurred when purchasing Futures Contracts and options on Futures Contracts when DNO issues shares as a result of a Creation Basket, as well as fees incurred when selling Futures Contracts and options on Futures Contracts when DNO redeems shares as a result of a Redemption Basket. Such fees are also incurred when Futures Contracts and options on Futures Contracts are purchased or redeemed for the purpose of rebalancing the portfolio. DNO also incurs commissions to brokers for the purchase and sale of Futures Contracts, Other Crude Oil-Related Investments or short-term obligations of the United States of two years or less ("Treasuries").

	For the three months ended March 31, 2015		For the three months ended March 31, 2014	
Total commissions accrued to brokers	\$ 9,563		\$ 2,485	
Total commissions as an annualized percentage of average net assets	0.28	%	0.09	%
Commissions accrued as a result of rebalancing	\$ 9,228		\$ 2,431	
Percentage of commissions accrued as a result of rebalancing	96.50	%	97.83	%
Commissions accrued as a result of creation and redemption activity	\$ 335		\$ 54	
Percentage of commissions accrued as a result of creation and redemption activity	3.50	%	2.17	%

The increase in the total commissions accrued to brokers for the three months ended March 31, 2015, as compared to the three months ended March 31, 2014, was a result of increased brokerage fees due to a higher number of futures contracts being held and traded as a result of DNO's greater size as measured by total net assets.

DNO and the NYMEX entered into a licensing agreement on May 22, 2009, as amended on October 20, 2011, whereby DNO was granted a non-exclusive license to use certain of the NYMEX's settlement prices and service marks. Under the licensing agreement, DNO and the Related Public Funds, other than BNO, USCI, CPER and USAG, pay the NYMEX an asset-based fee for the license, the terms of which are described in *Note 3*. DNO expressly disclaims any association with the NYMEX or endorsement of DNO by the NYMEX and acknowledges that "NYMEX" and "New York Mercantile Exchange" are registered trademarks of the NYMEX.

NOTE 5 — FINANCIAL INSTRUMENTS, OFF-BALANCE SHEET RISKS AND CONTINGENCIES

DNO engages in the trading of futures contracts and options on futures contracts and may engage in cleared swaps (collectively, "derivatives"). DNO is exposed to both market risk, which is the risk arising from changes in the market value of the contracts, and credit risk, which is the risk of failure by another party to perform according to the terms of a contract.

DNO may enter into futures contracts, options on futures contracts and cleared swaps to gain exposure to changes in the value of an underlying commodity. A futures contract obligates the seller to deliver (and the purchaser to accept) the future delivery of a specified quantity and type of a commodity at a specified time and place. Some futures contracts may call for physical delivery of the asset, while others are settled in cash. The contractual obligations of a buyer or seller may generally be satisfied by taking or making physical delivery of the underlying commodity or by making an offsetting sale or purchase of an identical futures contract on the same or linked exchange before the designated date of delivery. Cleared swaps are OTC agreements that are eligible to be cleared by a clearinghouse, e.g., ICE Clear Europe, but which are not traded on an exchange. A cleared swap is created when the parties to an

off-exchange OTC swap transaction agree to extinguish their OTC contract and replace it with a cleared swap. Cleared swaps are intended to provide the efficiencies and benefits that centralized clearing on an exchange offers to traders of futures contracts, including credit risk intermediation and the ability to offset positions initiated with different counterparties.

The purchase and sale of futures contracts, options on futures contracts and cleared swaps require margin deposits with a FCM. Additional deposits may be necessary for any loss on contract value. The Commodity Exchange Act requires a FCM to segregate all customer transactions and assets from the FCM's proprietary activities.

Futures contracts, options on futures contracts and cleared swaps involve, to varying degrees, elements of market risk (specifically commodity price risk) and exposure to loss in excess of the amount of variation margin. The face or contract amounts reflect the extent of the total exposure DNO has in the particular classes of instruments. Additional risks associated with the use of futures contracts are an imperfect correlation between movements in the price of the futures contracts and the market value of the underlying securities and the possibility of an illiquid market for a futures contract. Buying and selling options on futures contracts exposes investors to the risks of purchasing or selling futures contracts.

All of the futures contracts held by DNO were exchange-traded through March 31, 2015. The risks associated with exchange-traded contracts are generally perceived to be less than those associated with OTC transactions since, in OTC transactions, a party must rely solely on the credit of its respective individual counterparties. However, in the future, if DNO were to enter into non-exchange traded contracts, it would be subject to the credit risk associated with counterparty non-performance. The credit risk from counterparty non-performance associated with such instruments is the net unrealized gain, if any, on the transaction. DNO has credit risk under its futures contracts since the sole counterparty to all domestic and foreign futures contracts is the clearinghouse for the exchange on which the relevant contracts are traded. In addition, DNO bears the risk of financial failure by the clearing broker.

DNO's cash and other property, such as Treasuries, deposited with a FCM are considered commingled with all other customer funds, subject to the FCM's segregation requirements. In the event of a FCM's insolvency, recovery may be limited to a pro rata share of segregated funds available. It is possible that the recovered amount could be less than the total of cash and other property deposited. The insolvency of a FCM could result in the complete loss of DNO's assets posted with that FCM; however, the majority of DNO's assets are held in Treasuries, cash and/or cash equivalents with DNO's custodian and would not be impacted by the insolvency of a FCM. The failure or insolvency of DNO's custodian, however, could result in a substantial loss of DNO's assets.

USCF invests a portion of DNO's cash in money market funds that seek to maintain a stable per share NAV. DNO is exposed to any risk of loss associated with an investment in such money market funds. As of March 31, 2015, DNO held investments in money market funds in the amount of \$3,000,000. By comparison, as of December 31, 2014 DNO did not hold investments in money market funds. DNO also holds cash deposits with its custodian. Pursuant to a written agreement with BBH&Co., uninvested overnight cash balances are swept to offshore branches of U.S. regulated and domiciled banks located in Toronto, Canada; London, United Kingdom; Grand Cayman, Cayman Islands; and Nassau, Bahamas; which are subject to U.S. regulation and regulatory oversight. As of March 31, 2015 and December 31, 2014, DNO held cash deposits and investments in Treasuries in the amounts of \$11,980,387 and \$9,809,332, respectively, with the custodian and FCM. Some or all of these amounts may be subject to loss should DNO's custodian and/or FCM cease operations.

For derivatives, risks arise from changes in the market value of the contracts. Theoretically, DNO is exposed to market risk equal to the value of futures contracts purchased and unlimited liability on such contracts sold short. As both a buyer and a seller of options, DNO pays or receives a premium at the outset and then bears the risk of unfavorable changes in the price of the contract underlying the option.

DNO's policy is to continuously monitor its exposure to market and counterparty risk through the use of a variety of financial, position and credit exposure reporting controls and procedures. In addition, DNO has a policy of requiring review of the credit standing of each broker or counterparty with which it conducts business.

The financial instruments held by DNO are reported in its condensed statements of financial condition at market or fair value, or at carrying amounts that approximate fair value, because of their highly liquid nature and short-term maturity.

NOTE 6 — FINANCIAL HIGHLIGHTS

The following table presents per share performance data and other supplemental financial data for the three months ended March 31, 2015 and 2014 for the shareholders. This information has been derived from information presented

in the condensed financial statements.

	For the three months ended March 31, 2015 (Unaudited)		For the three months ended March 31, 2014 (Unaudited)	
Per Share Operating Performance:				
Net asset value, beginning of period	\$ 55.68		\$ 34.23	
Total income (loss)	6.12		(1.57))
Net expenses	(0.11))	(0.07))
Net increase (decrease) in net asset value	6.01		(1.64))
Net asset value, end of period	\$ 61.69		\$ 32.59	
Total Return	10.79	%	(4.79))%
Ratios to Average Net Assets				
Total income (loss)	7.66	%	(4.70))%
Management fees*	0.60	%	0.60	%
Total expenses excluding management fees*	0.77	%	0.96	%
Expenses waived*	(0.62))%	(0.68))%
Net expenses excluding management fees*	0.15	%	0.28	%
Net income (loss)	7.47	%	(4.92))%

* Annualized

Total returns are calculated based on the change in value during the period. An individual shareholder's total return and ratio may vary from the above total returns and ratios based on the timing of contributions to and withdrawals from DNO.

NOTE 7 — FAIR VALUE OF FINANCIAL INSTRUMENTS

DNO values its investments in accordance with Accounting Standards Codification 820 – Fair Value Measurements and Disclosures (“ASC 820”). ASC 820 defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles, and expands disclosures about fair value measurement. The changes to past practice resulting from the application of ASC 820 relate to the definition of fair value, the methods used to measure fair value, and the expanded disclosures about fair value measurement. ASC 820 establishes a fair value hierarchy that distinguishes between: (1) market participant assumptions developed based on market data obtained from sources independent of DNO (observable inputs) and (2) DNO's own assumptions about market participant assumptions developed based on the best information available under the circumstances (unobservable inputs). The three levels defined by the ASC 820 hierarchy are as follows:

Level I – Quoted prices (unadjusted) in active markets for *identical* assets or liabilities that the reporting entity has the ability to access at the measurement date.

Level II – Inputs other than quoted prices included within Level I that are observable for the asset or liability, either directly or indirectly. Level II assets include the following: quoted prices for *similar* assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the asset or liability, and inputs that are derived principally from or corroborated by observable market data by correlation or other means (market-corroborated inputs).

Level III – Unobservable pricing input at the measurement date for the asset or liability. Unobservable inputs shall be used to measure fair value to the extent that observable inputs are not available.

In some instances, the inputs used to measure fair value might fall within different levels of the fair value hierarchy. The level in the fair value hierarchy within which the fair value measurement in its entirety falls shall be determined based on the lowest input level that is significant to the fair value measurement in its entirety.

The following table summarizes the valuation of DNO's securities at March 31, 2015 using the fair value hierarchy:

At March 31, 2015	Total	Level I	Level II	Level III
Short-Term Investments	\$6,999,187	\$6,999,187	\$ —	\$ —
Exchange-Traded Futures Contracts				
United States Contracts	497,040	497,040	—	—

During the three months ended March 31, 2015, there were no transfers between Level I and Level II.

The following table summarizes the valuation of DNO's securities at December 31, 2014 using the fair value hierarchy:

At December 31, 2014	Total	Level I	Level II	Level III
Short-Term Investments	\$2,999,297	\$2,999,297	\$ —	\$ —
Exchange-Traded Futures Contracts				
United States Contracts	1,328,190	1,328,190	—	—

During the year ended December 31, 2014, there were no transfers between Level I and Level II.

Effective January 1, 2009, DNO adopted the provisions of Accounting Standards Codification 815 – Derivatives and Hedging, which require presentation of qualitative disclosures about objectives and strategies for using derivatives, quantitative disclosures about fair value amounts and gains and losses on derivatives.

Fair Value of Derivative Instruments

Derivatives not Accounted for as Hedging Instruments	Condensed Statements of Financial Condition Location	Fair Value At March 31, 2015	Fair Value At December 31, 2014
Futures – Commodity Contracts	Assets	\$ 497,040	\$ 1,328,190

The Effect of Derivative Instruments on the Condensed Statements of Operations

		Realized Gain (Loss) on Derivatives Recognized in Income	Change in Unrealized Gain (Loss) on Derivatives Recognized in Income	Realized Gain (Loss) on Derivatives Recognized in Income	Change in Unrealized Gain (Loss) on Derivatives Recognized in Income
Derivatives not Accounted for as Hedging Instruments Futures – Commodity Contracts	Realized gain (loss) on closed contracts	\$ 1,932,100		\$(477,360)
	Change in unrealized gain (loss) on open contracts		\$ (831,150)		\$ (44,420)

NOTE 8 — SUBSEQUENT EVENTS

DNO has performed an evaluation of subsequent events through the date the condensed financial statements were issued. This evaluation did not result in any subsequent events that necessitated disclosures and/or adjustments, other than as noted below:

Mr. Howard Mah, Management Director, Chief Financial Officer (Principal Accounting Officer), Secretary and Treasurer of USCF, general partner of United States Short Oil Fund, LP, tendered his resignation effective May 15, 2015. It is anticipated that Mr. Stuart Crumbaugh, who was hired by USCF on April 6, 2015, will be appointed the Chief Financial Officer (Principal Accounting Officer), Secretary and Treasurer effective May 15, 2015 (concurrently with the Board of Directors' accepting Mr. Mah's resignation).

Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations.

The following discussion should be read in conjunction with the condensed financial statements and the notes thereto of the United States Short Oil Fund, LP (“DNO”) included elsewhere in this quarterly report on Form 10-Q.

Forward-Looking Information

This quarterly report on Form 10-Q, including this “Management’s Discussion and Analysis of Financial Condition and Results of Operations,” contains forward-looking statements regarding the plans and objectives of management for future operations. This information may involve known and unknown risks, uncertainties and other factors that may cause DNO’s actual results, performance or achievements to be materially different from future results, performance or achievements expressed or implied by any forward-looking statements. Forward-looking statements, which involve assumptions and describe DNO’s future plans, strategies and expectations, are generally identifiable by use of the words “may,” “will,” “should,” “expect,” “anticipate,” “estimate,” “believe,” “intend” or “project,” the negative of these words or variations on these words or comparable terminology. These forward-looking statements are based on assumptions that may be incorrect, and DNO cannot assure investors that the projections included in these forward-looking statements will come to pass. DNO’s actual results could differ materially from those expressed or implied by the forward-looking statements as a result of various factors.

DNO has based the forward-looking statements included in this quarterly report on Form 10-Q on information available to it on the date of this quarterly report on Form 10-Q, and DNO assumes no obligation to update any such forward-looking statements. Although DNO undertakes no obligation to revise or update any forward-looking statements, whether as a result of new information, future events or otherwise, investors are advised to consult any additional disclosures that DNO may make directly to them or through reports that DNO in the future files with the U.S. Securities and Exchange Commission (the “SEC”), including annual reports on Form 10-K, quarterly reports on Form 10-Q and current reports on Form 8-K.

Introduction

DNO, a Delaware limited partnership, is a commodity pool that issues shares that may be purchased and sold on the NYSE Arca, Inc. (the “NYSE Arca”). The investment objective of DNO is for the daily changes in percentage terms of its shares’ per share net asset value (“NAV”) to inversely reflect the daily changes, in percentage terms, of the spot price of West Texas Intermediate (“WTI”) light, sweet crude oil delivered to Cushing, Oklahoma, as measured by the daily changes, in percentage terms, in the price of the futures contract for WTI light, sweet crude oil traded on the New York Mercantile Exchange (the “NYMEX”) that is the near month contract to expire, except when the near month contract is within two weeks of expiration, in which case it will be measured by the futures contract that is the next

month contract to expire (the “Benchmark Futures Contract”), less DNO’s expenses. “Near month contract” means the next contract traded on the NYMEX due to expire. “Next month contract” means the first contract traded on the NYMEX due to expire after the near month contract. It is not the intent of DNO to be operated in a fashion such that the per share NAV will equal, in dollar terms, the inverse of the spot price of WTI light, sweet crude oil or any particular futures contract based on WTI light, sweet crude oil. It is not the intent of DNO to be operated in a fashion such that its per share NAV will reflect the inverse of the percentage change of the price of any particular futures contract as measured over a time period greater than one day. The general partner of DNO, United States Commodity Funds LLC (“USCF”), believes that it is not practical to manage the portfolio to achieve such an investment goal when investing in short positions in Futures Contracts (as defined below) and Other Crude Oil-Related Investments (as defined below).

DNO invests in short positions in futures contracts for crude oil, diesel-heating oil, gasoline, natural gas and other petroleum-based fuels that are traded on the NYMEX, ICE Futures Exchange (“ICE Futures”) or other U.S. and foreign exchanges (collectively, “Futures Contracts”). DNO may take short positions in other crude oil-related investments such as cash-settled options on Futures Contracts, forward contracts for crude oil, cleared swap contracts and over-the-counter (“OTC”) transactions that are based on the price of crude oil and other petroleum-based fuels, Futures Contracts and indices based on the foregoing (collectively, “Other Crude Oil-Related Investments”). For convenience and unless otherwise specified, Futures Contracts and Other Crude Oil-Related Investments collectively are referred to as “Crude Oil Interests” in this quarterly report on Form 10-Q.

DNO seeks to achieve its investment objective by investing in short positions in a combination of Futures Contracts and Other Crude Oil-Related Investments such that daily changes in its per share NAV, measured in percentage terms, will closely track the inverse of the daily changes in the price of the Benchmark Futures Contract, also measured in percentage terms. USCF believes the daily changes in the price of the Benchmark Futures Contract have historically exhibited a close correlation with the daily changes in the spot price of WTI light, sweet crude oil. It is not the intent of DNO to be operated in a fashion such that the per share NAV will equal, in dollar terms, the inverse of the spot price of WTI light, sweet crude oil or any particular futures contract based on WTI light, sweet crude oil. It is not the intent of DNO to be operated in a fashion such that its per share NAV will reflect the inverse of the percentage change of the price of any particular futures contract as measured over a time period greater than one day. USCF believes that it is not practical to manage the portfolio to achieve such an investment goal when investing in Futures Contracts and Other Crude Oil-Related Investments.

To achieve its investment objective, DNO anticipates that it will need to maintain “short” positions in the Futures Contracts and Other Crude-Oil Related Investments in which it invests. A short position is one in which DNO will have sold the Futures Contract or Other Crude-Oil Related Investment and must buy it back or otherwise close out the position in the future. As a result, a drop in the market value of the Crude Oil Interest would lead to a potential gain for DNO, while an increase in the market value of the Crude Oil Interest would lead to a potential loss for DNO. Typically, a short position will produce a result that is the inverse of buying the Futures Contract or Other Crude-Oil Related Investment (an approach referred to as being “long” the investment). USCF expects the daily performance of DNO to generally be inverse to the daily performance of the United States Oil Fund, LP (“USO”), another commodity pool managed by USCF, which seeks to have the daily changes in percentage terms of its shares’ per share NAV track the daily changes in percentage terms of the spot price of light, sweet crude oil as traded in the United States.

Regulatory Disclosure

Impact of Accountability Levels, Position Limits and Price Fluctuation Limits. Futures contracts include typical and significant characteristics. Most significantly, the Commodity Futures Trading Commission (the “CFTC”) and the futures exchanges have established accountability levels and position limits on the maximum net long or net short futures contracts in commodity interests that any person or group of persons under common trading control (other than as a hedge, which an investment by DNO is not) may hold, own or control. The net position is the difference between an individual’s or firm’s open long contracts and open short contracts in any one commodity. In addition, most U.S.-based futures exchanges, such as the NYMEX, limit the daily price fluctuation for futures contracts. Currently, the ICE Futures imposes position and accountability limits that are similar to those imposed by U.S.-based futures exchanges and also limits the maximum daily price fluctuation, while some other non-U.S. futures exchanges have not adopted such limits.

The accountability levels for the Benchmark Futures Contract and other Futures Contracts traded on the NYMEX are not a fixed ceiling, but rather a threshold above which the NYMEX may exercise greater scrutiny and control over an investor’s positions. The current accountability level for any one-month in the Benchmark Futures Contract is 10,000 net contracts. In addition, the NYMEX imposes an accountability level for all months of 20,000 net futures contracts for investments in futures contracts for light, sweet crude oil. In addition, the ICE Futures maintains the same accountability levels, position limits and monitoring authority for its light, sweet crude oil contract as the NYMEX. If DNO and the Related Public Funds (as defined below) exceed these accountability levels for investments in the futures contract for light, sweet crude oil, the NYMEX and ICE Futures will monitor DNO’s and the Related Public Funds’ exposure and may ask for further information on their activities, including the total size of all positions, investment and trading strategy, and the extent of liquidity resources of DNO and the Related Public Funds. If deemed necessary by the NYMEX and/or ICE Futures, DNO could be ordered to reduce its aggregate net position back to the accountability level. As of March 31, 2015, DNO held short positions in 324 WTI Crude Oil Futures CL Contracts traded on the NYMEX and DNO did not hold short positions on the ICE Futures. For the three months ended March 31, 2015, DNO did not exceed accountability levels on the NYMEX or ICE Futures.

Position limits differ from accountability levels in that they represent fixed limits on the maximum number of futures contracts that any person may hold and cannot allow such limits to be exceeded without express CFTC authority to do so. In addition to accountability levels and position limits that may apply at any time, the NYMEX and the ICE Futures impose position limits on contracts held in the last few days of trading in the near month contract to expire. It is unlikely that DNO will run up against such position limits because DNO's investment strategy is to close out its positions and "roll" from the near month contract to expire to the next month contract beginning two weeks from expiration of the contract. For the three months ended March 31, 2015, DNO did not exceed any position limits imposed by the NYMEX and ICE Futures.

The regulation of commodity interest trading in the United States and other countries is an evolving area of the law. The various statements made in this summary are subject to modification by legislative action and changes in the rules and regulations of the SEC, Financial Industry Regulatory Authority ("FINRA"), CFTC, the National Futures Association (the "NFA"), the futures exchanges, clearing organizations and other regulatory bodies.

Futures Contracts and Position Limits

The CFTC is prohibited by statute from regulating trading on non-U.S. futures exchanges and markets. The CFTC, however, has adopted regulations relating to the marketing of non-U.S. futures contracts in the United States. These regulations permit certain contracts on non-U.S. exchanges to be offered and sold in the United States.

On November 5, 2013, the CFTC proposed a rulemaking that would establish specific limits on speculative positions in 28 physical commodity futures and option contracts as well as swaps that are economically equivalent to such contracts in the agriculture, energy and metals markets (the “Position Limit Rules”). On the same date, the CFTC proposed another rule addressing the circumstances under which market participants would be required to aggregate their positions with other persons under common ownership or control (the “Proposed Aggregation Requirements”). Specifically, the Position Limit Rules would, among other things: identify which contracts are subject to speculative position limits; set thresholds that restrict the number of speculative positions that a person may hold in a spot month, individual month, and all months combined; create an exemption for positions that constitute bona fide hedging transactions; impose responsibilities on designated contract markets (“DCMs”) and swap execution facilities (“SEFs”) to establish position limits or, in some cases, position accountability rules; and apply to both futures and swaps across four relevant venues: OTC (“OTC”), DCMs, SEFs as well as non-U.S. located platforms. Until such time as the Position Limit Rules are adopted, the regulatory architecture in effect prior to the adoption of the Position Limit Rules will govern transactions in commodities and related derivatives (collectively, “Referenced Contracts”). Under that system, the CFTC enforces federal limits on speculation in agricultural products (e.g., corn, wheat and soy), while futures exchanges enforce position limits and accountability levels for agricultural and certain energy products (e.g., oil and natural gas). As a result, DNO may be limited with respect to the size of its investments in any commodities subject to these limits. Finally, subject to certain narrow exceptions, the Position Limit Rules require the aggregation, for purposes of the position limits, of all positions in the 28 Referenced Contracts held by a single entity and its affiliates, regardless of whether such position existed on U.S. futures exchanges, non-U.S. futures exchanges, in cleared swaps or in OTC swaps. Under the CFTC’s existing position limits requirements and the Position Limit Rules., a market participant is generally required to aggregate all positions for which that participant controls the trading decisions with all positions for which that participant has a 10 percent or greater ownership interest in an account or position, as well as the positions of two or more persons acting pursuant to an express or implied agreement or understanding. At this time, it is unclear how the Proposed Aggregation Requirements may affect DNO, but it may be substantial and adverse. By way of example, the Proposed Aggregation Requirements in combination with the Position Limit Rules may negatively impact the ability of DNO to meet its investment objectives through limits that may inhibit USCF’s ability to sell additional Creation Baskets of DNO.

Based on its current understanding of the final position limit regulations, USCF does not anticipate significant negative impact on the ability of DNO to achieve its investment objective.

“Swap” Transactions

The Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”) imposes regulatory requirements on certain “swap” transactions that DNO is authorized to engage in that may ultimately impact the ability of DNO to meet its investment objective. The term “swap” is broadly defined to include various types of OTC derivatives, including swaps and options.

Regulations require that certain transactions ultimately falling within the definition of “swap” be executed on organized exchanges or “swap execution facilities” and cleared through regulated clearing organizations (“derivative clearing

organizations” (“DCOs”)), if the CFTC mandates the central clearing of a particular contract. As of June 10, 2013, swap dealers, major swap participants, commodity pools, certain private funds and entities predominantly engaged in financial activities were required to clear certain credit default swaps and interest rate swaps. As a result, if DNO enters into or has entered into certain interest rate and credit default swaps, such swaps will be required to be centrally cleared. Determination on other types of swaps are expected in the future, and, when finalized, could require DNO to centrally clear certain OTC instruments presently entered into and settled on a bi-lateral basis. If a swap is required to be cleared, the initial margin will be set by the clearing organizations, subject to certain regulatory requirements and guidelines. Initial and variation margin requirements for swap dealers and major swap participants who enter into uncleared swaps and capital requirements for swap dealers and major swap participants who enter into both cleared and uncleared trades will be set by the CFTC, the SEC or the applicable “Prudential Regulator.”

Current rules and regulations require that certain swaps determined to be available to trade on a SEF must be executed over such a facility, including the obligation for facilities offering multiple person execution services. Based upon applications filed by several SEFs with the CFTC, the CFTC has determined that certain interest rate swaps and credit default swaps must register as a SEF and be executed on a SEF.

Current rules and regulations require enhanced customer protections, risk management programs, internal monitoring and controls, capital and liquidity standards, customer disclosures and auditing and examination programs for futures commission merchants (“FCMs”). The rules are intended to afford greater assurances to market participants that customer segregated funds and secured amounts are protected, customers are provided with appropriate notice of the risks of futures trading and of the FCMs with which they may choose to do business, FCMs are monitoring and managing risks in a robust manner, the capital and liquidity of FCMs are strengthened to safeguard the continued operations and the auditing and examination programs of the CFTC and the self-regulatory organizations are monitoring the activities of FCMs in a thorough manner.

On November 6, 2013, the CFTC published a final rule that imposes requirements on swap dealers and major swap participants with respect to the treatment of collateral posted by their counterparties to margin, guarantee, or secure uncleared swaps. In other words, the rule places restrictions on what swap dealers and major swap participants can do with collateral posted by DNO in connection with uncleared swaps.

In addition to the rules and regulations imposed under the Dodd-Frank Act, swap dealers that are European banks may also be subject to European Market Infrastructure Regulation (“EMIR”). These regulations have not yet been fully implemented.

On August 12, 2013, the CFTC issued final rules establishing compliance obligations for commodity pool operators (“CPOs”) of investment companies registered under the Investment Company Act of 1940 (the “Investment Company Act”) that are required to register due to recent changes to CFTC Regulation 4.5. The final rules were issued in a CFTC release entitled “Harmonization of Compliance Obligations for Registered Investment Companies Required to Register as Commodity Pool Operators.” For entities that are registered with both the CFTC and the SEC, the CFTC will accept the SEC’s disclosure, reporting and recordkeeping regime as substituted compliance for substantially all of Part 4 of the CFTC’s regulations, so long as they comply with comparable requirements under the SEC’s statutory and regulatory compliance regime. Thus, the final rules (the “Harmonization Rules”) allow dually registered entities to meet certain CFTC regulatory requirements for CPOs by complying with SEC rules to which they are already subject. Although DNO is not a registered investment company under the Investment Company Act, the Harmonization Rules amended certain CFTC disclosure rules to make the requirements for all CPOs to periodically update their disclosure documents consistent with those of the SEC. This change will decrease the burden to DNO and USCF of having to comply with inconsistent regulatory requirements. It is not known whether the CFTC will make additional amendments to its disclosure, reporting and recordkeeping rules to further harmonize these obligations with those of the SEC as they apply to DNO and USCF, but any such further rule changes could result in additional operating efficiencies for DNO and USCF.

Money Market Reform

On July 23, 2014, the SEC adopted to reform money market funds such that institutional prime money market funds will float their net asset value as well as impose rules such that all money market funds’ boards of directors will be required to implement rules to discourage and prevent runs by investors through the use of redemption fees and gates. Money market funds have two years from the date of adoption to implement the reform. DNO currently invests in money market funds, as well as Treasuries with a maturity date of two years or less, as an investment for assets not used for margin or collateral in the Futures Contracts. It is unclear at this time what the impact of money market reform would have on DNO’s ability to hedge risk, however, the imposition of a floating net asset value could cause DNO to limit remaining assets solely in Treasuries and cash.

As the regulatory requirements are constantly evolving, it is difficult to predict the effect any regulatory changes may have on DNO.

Price Movements

Crude oil futures prices were volatile during the three months ended March 31, 2015 and exhibited moderate daily swings along with an uneven downward trend during the period. The price of the Benchmark Oil Futures Contract started the period at \$53.27 per barrel. The low of the period was on January 28, 2015 when the price dropped to \$44.45 per barrel. The high of the period was on February 27, 2015 when the price reached \$54.29 per barrel. The period ended with the Benchmark Oil Futures Contract at \$47.60 per barrel, down approximately 10.64% over the

period. DNO's per share NAV began the period at \$55.68 and ended the period at \$61.69 on March 31, 2015, an increase of approximately 10.79% over the period. DNO's per share NAV reached its high for the period on January 28, 2015 at \$66.00 and reached its low for the period on February 17, 2015 at \$53.36. Since DNO's investment objective is to track the inverse of the daily changes in the price of the Benchmark Futures Contract, the decrease in DNO's per share NAV reflects the inverse of the increase in the price of the Benchmark Futures Contract. The Benchmark Futures Contract prices listed above began with the February 2015 contract and ended with the May 2015 contract. The decrease of approximately 10.64% on the Benchmark Futures Contract listed above is a hypothetical return only and could not actually be achieved by an investor holding Futures Contracts. An investment in Futures Contracts would need to be rolled forward during the time period described in order to simulate such a result. Furthermore, the change in the nominal price of these differing Futures Contracts, measured from the start of the period to the end of the period, does not represent the actual benchmark results that DNO seeks to track, which are more fully described below in the section titled "*Tracking DNO's Benchmark.*"

During the three months ended March 31, 2015, the crude oil futures market was predominantly in contango, meaning that the price of the near month crude Oil Futures Contract was lower than the price of the next month crude Oil Futures Contract, and contracts further away from expiration. On days when the market was in backwardation, the price of the near month crude oil Futures Contract was typically higher than the price of the next month crude oil Futures Contract, or contracts further away from expiration. During the year ended December 31, 2014, crude oil inventories, particularly those in Cushing, Oklahoma, began to build from prior high levels, which contributed to the crude oil futures market moving into contango through the end of December 2014. During the three months ended March 31, 2015, crude oil inventories continued to build from present levels which contributed to the crude oil futures market remaining in contango through the end of March 2015. For a discussion of the impact of backwardation and contango on total returns, see "*Term Structure of Crude Oil Prices and the Impact on Total Returns*" below.

Valuation of Futures Contracts and the Computation of the Per Share NAV

The per share NAV of DNO's shares is calculated once each NYSE Arca trading day. The per share NAV for a particular trading day is released after 4:00 p.m. New York time. Trading during the core trading session on the NYSE Arca typically closes at 4:00 p.m. New York time. DNO's administrator uses the NYMEX closing price (determined at the earlier of the close of the NYMEX or 2:30 p.m. New York time) for the contracts held on the NYMEX, but calculates or determines the value of all other DNO investments, including ICE Futures contracts or other futures contracts, as of the earlier of the close of the NYSE Arca or 4:00 p.m. New York time.

Results of Operations and the Crude Oil Market

Results of Operations. On September 24, 2009, DNO listed its shares on the NYSE Arca under the ticker symbol “DNO.” On that day, DNO established its initial offering price at \$50.00 per share and issued 200,000 shares to the initial Authorized Participant in exchange for \$10,000,000 in cash.

Since its initial offering of 25,000,000 shares, DNO has not registered any subsequent offerings of its shares. As of March 31, 2015, DNO had issued 3,500,000 shares, 250,000 of which were outstanding. As of March 31, 2015, there were 21,500,000 shares registered but not yet issued.

More shares may have been issued by DNO than are outstanding due to the redemption of shares. Unlike funds that are registered under the Investment Company Act of 1940, as amended, shares that have been redeemed by DNO cannot be resold by DNO. As a result, DNO contemplates that additional offerings of its shares will be registered with the SEC in the future in anticipation of additional issuances and redemptions.

As of March 31, 2015, DNO had the following Authorized Participants: Citadel Securities LLC, Citigroup Global Markets Inc., Credit Suisse Securities (USA) LLC, Deutsche Bank Securities Inc., Goldman Sachs & Company, JP Morgan Securities Inc., Merrill Lynch Professional Clearing Corporation, Morgan Stanley & Company Inc., NewEdge USA LLC, Nomura Securities International Inc., RBC Capital Markets LLC, SG Americas Securities LLC, UBS Securities LLC, Virtu Financial BD LLC and Virtu Financial Capital Markets.

For the Three Months Ended March 31, 2015 Compared to the Three Months Ended March 31, 2014

	For the three months ended March 31, 2015	For the three months ended March 31, 2014		
Average daily total net assets	\$ 14,406,729	\$ 11,062,825

Percentage of commissions accrued as a result of creation and redemption activity	3.50	%	2.17	%

Portfolio Expenses. DNO's expenses consist of investment management fees, brokerage fees and commissions, certain offering costs, licensing fees, the fees and expenses of the independent directors of USCF and expenses relating to tax accounting and reporting requirements. The management fee that DNO pays to USCF is calculated as a percentage of the total net assets of DNO. The fee is accrued daily and paid monthly.

Average interest rates earned on short-term investments held by DNO, including cash, cash equivalents and Treasuries, were similar during the three months ended March 31, 2015, compared to the three months ended March 31, 2014. As a result, the amount of income earned by DNO as a percentage of average daily total net assets was similar during the three months ended March 31, 2015.

The total fees and expenses excluding management fees for the three months ended March 31, 2015, compared to the three months ended March 31, 2014, was similar during the three months ended March 31, 2015.

The increase in the total commissions accrued to brokers by DNO for the three months ended March 31, 2015, compared to the three months ended March 31, 2014, was primarily due to an increase in the number of contracts being held and traded as the result of DNO's greater size as measured by total net assets.

Tracking DNO's Benchmark

USCF seeks to manage DNO's portfolio such that changes in its average daily per share NAV, on a percentage basis, closely inversely track the daily changes in the average price of the Benchmark Futures Contract. Specifically, USCF seeks to manage the portfolio such that over any rolling period of 30-valuation days, the average daily change in DNO's per share NAV is within a range of (90)% to (110)% ((0.9) to (1.1)) of the average daily change in the price of the Benchmark Futures Contract. As an example, if the average daily movement of the price of the Benchmark Futures Contract for a particular 30-valuation day time period was 0.5% per day, USCF would attempt to manage the portfolio such that the average daily movement of the per share NAV during that same time period fell between (0.45)% and (0.55)% (*i.e.*, between (0.9) and (1.1) of the benchmark's results). DNO's portfolio management goals do not include trying to make the nominal price of DNO's per share NAV equal to the inverse of the nominal price of the current Benchmark Futures Contract or the inverse of the spot price for WTI light, sweet crude oil. USCF believes that it is not practical to manage the portfolio to achieve such an investment goal when investing in short positions in Futures Contracts.

For the 30-valuation days ended March 31, 2015, the inverse of the simple average daily change in the Benchmark Futures Contract was 0.521%, while the simple average daily change in the per share NAV of DNO over the same time period was 0.52%. The average daily difference was (0.001)% (or (0.1) basis points, where 1 basis point equals 1/100 of 1%). As a percentage of the inverse of the daily movement of the Benchmark Futures Contract, the average error in daily tracking by the per share NAV was (0.196)%, meaning that over this time period DNO's tracking error was within the plus or minus 10% range established as its benchmark tracking goal.

Since the commencement of the offering of DNO's shares to the public on September 24, 2009 to March 31, 2015, the inverse of the simple average daily change in the Benchmark Futures Contract was 0.035%, while the simple average daily change in the per share NAV of DNO over the same time period was 0.031%. The average daily difference was 0.004% (or 0.4 basis points, where 1 basis point equals 1/100 of 1%). As a percentage of the inverse of the daily movement of the Benchmark Futures Contract, the average error in daily tracking by the per share NAV was (1.179)%, meaning that over this time period DNO's tracking error was within the plus or minus 10% range established as its benchmark tracking goal. The following two graphs demonstrate the correlation between the changes in DNO's NAV and the changes in the Benchmark Futures Contract. The first graph exhibits the daily changes for the last 30 valuation days ended March 31, 2015; the second graph measures monthly changes from March 31, 2010 through March 31, 2015.

****PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS***

****PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS***

An alternative tracking measurement of the return performance of DNO versus the inverse of the return of its Benchmark Futures Contract can be calculated by comparing the actual return of DNO, measured by changes in its per share NAV, versus the *expected* changes in its per share NAV under the assumption that DNO's returns had been exactly inverse to the daily changes in its Benchmark Futures Contract.

For the three months ended March 31, 2015, the actual total return of DNO as measured by changes in its per share NAV was 10.79%. This is based on an initial per share NAV of \$55.68 as of December 31, 2014 and an ending per share NAV as of March 31, 2015 of \$61.69. During this time period, DNO made no distributions to its shareholders. However, if DNO's daily changes in its per share NAV had instead exactly inversely tracked the changes in the daily total return of the Benchmark Futures Contract, DNO would have had an estimated per share NAV of \$61.73 as of March 31, 2015, for a total return over the relevant time period of 10.87%. The difference between the actual per share NAV total return of DNO of 10.79% and the expected total return based on the inverse of changes in the daily return of the Benchmark Futures Contract of 10.87% was an error over the time period of (0.07)%, which is to say that DNO's actual total return underperformed the inverse of the benchmark result by that percentage. DNO incurs expenses primarily composed of the management fee, brokerage commissions for the buying and selling of futures contracts, and other expenses. The impact of these expenses tends to cause daily changes in the per share NAV of DNO to track slightly lower than the inverse of daily changes in the price of the Benchmark Oil Futures Contract.

By comparison, for the three months ended March 31, 2014, the actual total return of DNO as measured by changes in its per share NAV was (4.79)%. This was based on an initial per share NAV of \$34.23 as of December 31, 2013 and an ending per share NAV as of March 31, 2014 of \$32.59. During this time period, DNO made no distributions to its shareholders. However, if DNO's daily changes in its per share NAV had instead exactly inversely tracked the changes in the daily total return of the Benchmark Futures Contract, DNO would have had an estimated per share NAV of \$32.66 as of March 31, 2014, for a total return over the relevant time period of (4.59)%. The difference between the actual per share NAV total return of DNO of (4.79)% and the expected total return based on the inverse of changes in the daily return of the Benchmark Futures Contract of (4.59)% was an error over the time period of (0.20)%, which is to say that DNO's actual total return underperformed the inverse of the benchmark result by that percentage. USCF believes that a portion of the difference between the actual total return and the expected benchmark total return can be attributed to the net impact of the expenses that DNO pays, offset in part by the income that DNO collects on its cash and cash equivalent holdings.

There are currently three factors that have impacted or are most likely to impact DNO's ability to accurately inversely track its Benchmark Futures Contract.

First, DNO may buy or sell its holdings in the then current Benchmark Futures Contract at a price other than the closing settlement price of that contract on the day during which DNO executes the trade. In that case, DNO may pay a price that is higher, or lower, than that of the Benchmark Futures Contract, which could cause the changes in the daily per share NAV of DNO to either be too high or too low relative to the inverse of the daily changes in the Benchmark Futures Contract. During the three months ended March 31, 2015, USCF attempted to minimize the effect of these transactions by seeking to execute its purchase or sale of the Benchmark Futures Contract at, or as close as possible to, the end of the day settlement price. However, it may not always be possible for DNO to obtain the closing settlement price and there is no assurance that failure to obtain the closing settlement price in the future will not adversely impact DNO's attempt to inversely track the Benchmark Futures Contract over time.

Second, DNO incurs expenses primarily composed of the management fee, brokerage commissions for the buying and selling of futures contracts, and other expenses. The impact of these expenses tends to cause daily changes in the per share NAV of DNO to track slightly lower than the inverse of daily changes in the price of the Benchmark Oil Futures Contract. At the same time, DNO earns dividend and interest income on its cash, cash equivalents and Treasuries. DNO is not required to distribute any portion of its income to its shareholders and did not make any distributions to shareholders during the three months ended March 31, 2015. Interest payments, and any other income, were retained within the portfolio and added to DNO's NAV. When this income exceeds the level of DNO's expenses for its management fee, brokerage commissions and other expenses (including ongoing registration fees, licensing fees and the fees and expenses of the independent directors of USCF), DNO will realize a net yield that will tend to cause daily changes in the per share NAV of DNO to track slightly higher than the inverse of daily changes in the Benchmark Futures Contract. If short-term interest rates rise above the current levels, the level of deviation created by the yield would decrease. Conversely, if short-term interest rates were to decline, the amount of error created by the yield would increase. When short-term yields drop to a level lower than the combined expenses of the management fee and the brokerage commissions, then the tracking error becomes a negative number and would tend to cause the daily returns of the per share NAV to underperform the inverse of the daily returns of the Benchmark Futures Contract. USCF anticipates that interest rates will continue to remain at historical lows and, therefore, it is anticipated that fees and expenses paid by DNO will continue to be higher than interest earned by DNO. As such, USCF anticipates that DNO will continue to underperform its benchmark until such a time when interest earned at least equals or exceeds the fees and expenses paid by DNO.

Third, DNO may hold Other Crude Oil-Related Investments in its portfolio that may fail to closely track the inverse of the Benchmark Futures Contract's total return movements. In that case, the error in tracking the inverse of the Benchmark Futures Contract could result in daily changes in the per share NAV of DNO that are either too high, or too low, relative to the inverse of the daily changes in the Benchmark Futures Contract. During the three months ended March 31, 2015, DNO did not hold any Other Crude Oil-Related Investments. If DNO increases in size, and due to its obligations to comply with regulatory limits, DNO may invest in Other Crude Oil-Related Investments which may have the effect of increasing transaction related expenses and may result in increased tracking error.

Term Structure of Crude Oil Futures Prices and the Impact on Total Returns. Several factors determine the total return from investing in a futures contract position. One factor that impacts the total return that will result from investing in near month futures contracts and “rolling” those contracts forward each month is the price relationship between the current near month contract and the next month contract. For example, if the price of the near month contract is higher than the next month contract (a situation referred to as “backwardation” in the futures market), then absent any other change there is a tendency for the price of a next month contract to rise in value as it becomes the near month contract and approaches expiration. Conversely, if the price of a near month contract is lower than the next month contract (a situation referred to as “contango” in the futures market), then absent any other change there is a tendency for the price of a next month contract to decline in value as it becomes the near month contract and approaches expiration.

As an example, assume that the price of crude oil for immediate delivery (the “spot” price), was \$50 per barrel, and the value of a position in the near month futures contract was also \$50. Over time, the price of the barrel of crude oil will fluctuate based on a number of market factors, including demand for oil relative to its supply. The value of the near month contract will likewise fluctuate in reaction to a number of market factors. If investors seek to maintain their position in a near month contract and not take delivery of the oil, every month they must sell their current near month contract as it approaches expiration and invest in the next month contract.

If the futures market is in backwardation, *e.g.*, when the expected price of crude oil in the future would be less, the investor would be buying a next month contract for a lower price than the current near month contract. Using the \$50 per barrel price above to represent the front month price, the price of the next month contract could be \$49 per barrel, that is, 2% cheaper than the front month contract. Hypothetically, and assuming no other changes to either prevailing crude oil prices or the price relationship between the spot price, the near month contract and the next month contract (and ignoring the impact of commission costs and the income earned on cash and/or cash equivalents), the value of the \$49 next month contract would rise as it approaches expiration and becomes the new near month contract with a price of \$50. In this example, the value of an investment in the second month contract would tend to rise faster than the spot price of crude oil, or fall slower. As a result, it would be possible in this hypothetical example for the spot price of crude oil to have risen 10% after some period of time, while the value of the investment in the second month futures contract would have risen 12%, assuming backwardation is large enough or enough time has elapsed. Similarly, the spot price of crude oil could have fallen 10% while the value of an investment in the futures contract could have fallen only 8%. Over time, if backwardation remained constant, the difference would continue to increase.

If the futures market is in contango, the investor would be buying a next month contract for a higher price than the current near month contract. Using again the \$50 per barrel price above to represent the front month price, the price of the next month contract could be \$51 per barrel, that is, 2% more expensive than the front month contract. Hypothetically, and assuming no other changes to either prevailing crude oil prices or the price relationship between the spot price, the near month contract and the next month contract (and ignoring the impact of commission costs and the income earned on cash and/or cash equivalents), the value of the next month contract would fall as it approaches expiration and becomes the new near month contract with a price of \$50. In this example, it would mean that the value of an investment in the second month would tend to rise slower than the spot price of crude oil, or fall faster. As a result, it would be possible in this hypothetical example for the spot price of crude oil to have risen 10% after some period of time, while the value of the investment in the second month futures contract will have risen only 8%,

assuming contango is large enough or enough time has elapsed. Similarly, the spot price of crude oil could have fallen 10% while the value of an investment in the second month futures contract could have fallen 12%. Over time, if contango remained constant, the difference would continue to increase.

The chart below compares the price of the near month contract to the average price of the near 12-month contracts over the last 10 years for WTI light, sweet crude oil. When the price of the near month contract is higher than the average price of the near 12-month contracts, the market would be described as being in backwardation. When the price of the near month contract is lower than the average price of the near 12-month contracts, the market would be described as being in contango. Although the prices of the near month contract and the average price of the near 12-month contracts do tend to move up or down together, it can be seen that at times the near month prices are clearly higher than the average price of the near 12-month contracts (backwardation), and other times they are below the average price of the near 12-month contracts (contango).

****PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS***

An alternative way to view the same data is to subtract the dollar price of the average dollar price of the near 12-month contracts for WTI light, sweet crude oil from the dollar price of the near month contract for WTI light, sweet crude oil. If the resulting number is a positive number, then the near month price is higher than the average price of the near 12 months and the market could be described as being in backwardation. If the resulting number is a negative number, then the near month price is lower than the average price of the near 12 months and the market could be described as being in contango. The chart below shows the results from subtracting the average dollar price of the near 12-month contracts from the near month price for the 10-year period between March 31, 2005 and March 31, 2015. Investors will note that the crude oil market spent time in both backwardation and contango.

****PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS***

An investment in a portfolio that involved owning only the near month contract would likely produce a different result than an investment in a portfolio that owned an equal number of each of the near 12 months' worth of contracts. Generally speaking, when the crude oil futures market is in backwardation, the near month only portfolio would tend to have a higher total return than the 12-month portfolio. Conversely, if the crude oil futures market was in contango, the portfolio containing 12 months' worth of contracts would tend to outperform the near month only portfolio. The chart below shows the annual results of owning a portfolio consisting of the near month contract and a portfolio containing the near 12 months' worth of contracts. In addition, the chart shows the annual change in the spot price of WTI light, sweet crude oil. In this example, each month, the near month only portfolio would sell the near month contract at expiration and buy the next month out contract. The portfolio holding an equal number of the near 12 months' worth of contracts would sell the near month contract at expiration and replace it with the contract that becomes the new twelfth month contract.

****PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS***

HYPOTHETICAL PERFORMANCE RESULTS HAVE MANY INHERENT LIMITATIONS, SOME OF WHICH ARE DESCRIBED BELOW. NO REPRESENTATION IS BEING MADE THAT DNO WILL OR IS LIKELY TO ACHIEVE PROFITS OR LOSSES SIMILAR TO THOSE SHOWN. IN FACT, THERE ARE FREQUENTLY SHARP DIFFERENCES BETWEEN HYPOTHETICAL PERFORMANCE RESULTS AND THE ACTUAL RESULTS ACHIEVED BY ANY PARTICULAR TRADING PROGRAM.

ONE OF THE LIMITATIONS OF HYPOTHETICAL PERFORMANCE RESULTS IS THAT THEY ARE GENERALLY PREPARED WITH THE BENEFIT OF HINDSIGHT. IN ADDITION, HYPOTHETICAL TRADING DOES NOT INVOLVE FINANCIAL RISK, AND NO HYPOTHETICAL TRADING RECORD CAN COMPLETELY ACCOUNT FOR THE IMPACT OF FINANCIAL RISK IN ACTUAL TRADING.

FOR EXAMPLE, THE ABILITY TO WITHSTAND LOSSES OR TO ADHERE TO A PARTICULAR TRADING PROGRAM IN SPITE OF TRADING LOSSES ARE MATERIAL POINTS WHICH CAN ALSO ADVERSELY AFFECT ACTUAL TRADING RESULTS. THERE ARE NUMEROUS OTHER FACTORS RELATED TO THE MARKETS IN GENERAL OR TO THE IMPLEMENTATION OF ANY SPECIFIC TRADING PROGRAM WHICH CANNOT BE FULLY ACCOUNTED FOR IN THE PREPARATION OF HYPOTHETICAL PERFORMANCE RESULTS AND ALL OF WHICH CAN ADVERSELY AFFECT ACTUAL TRADING RESULTS.

As seen in the chart above, there have been periods of both positive and negative annual total returns for both hypothetical portfolios over the last 10 years. In addition, there have been periods during which the near month only

approach had higher returns, and periods where the 12-month approach had higher total returns. The above chart does not represent the performance history of DNO or any Related Public Fund.

Historically, the crude oil futures markets have experienced periods of contango and backwardation, with backwardation being in place roughly as often as contango since oil futures trading started in 1982. Following the global financial crisis in the fourth quarter of 2008, the crude oil market moved into contango and remained in contango for a period of several years. During parts of 2009, the level of contango was unusually steep as a combination of slack U.S. and global demand for crude oil and issues involving the physical transportation and storage of crude oil at Cushing, Oklahoma, the primary pricing point for oil traded in the U.S., led to unusually high inventories of crude oil. Since then, a combination of improved transportation and storage capacity, along with growing demand for crude oil globally, has moderated the inventory build-up and led to reduced levels of contango by 2011. The crude oil futures market was in a state of contango during the three months ended March 31, 2015.

Periods of contango or backwardation do not materially impact DNO's investment objective of having the daily percentage changes in its per share NAV inversely track the daily percentage changes in the price of the Benchmark Futures Contract since the impact of backwardation and contango tend to equally impact the daily percentage changes in price of both DNO's shares and the Benchmark Futures Contract. It is impossible to predict with any degree of certainty whether backwardation or contango will occur in the future. It is likely that both conditions will occur during different periods.

Crude Oil Market. During the three months ended March 31, 2015, crude oil prices were impacted by several factors. WTI crude oil inventories grew to 471.4 million barrels by the end of March, 24% higher than the same week a year earlier, and the highest levels since the EIA began reporting storage data in 1982. Record inventory levels were set for many weeks in the quarter as crude supplies consistently grew. The Organization of the Petroleum Exporting Countries' ("OPEC") decision in late 2014 to maintain production levels despite falling demand led to an oversupplied market. Continuing concerns about the political negotiations with Iran, as well as security concerns in Yemen, Libya and Iraq, have left the market subject to bouts of heightened volatility. United States crude oil prices finished the first quarter of 2015 approximately 10.64% lower than at the beginning of the year. USCF believes that global inventories are likely to stabilize later in the year and record production growth should eventually be curtailed by low prices. However, should supply continue growing or should the global economic situation cease to improve, or decline, there is a meaningful possibility that crude oil prices could fall further, while disruptions due to conflicts in the Middle East would likely have the opposite effect.

Crude Oil Price Movements in Comparison to Other Energy Commodities and Investment Categories. USCF believes that investors frequently measure the degree to which prices or total returns of one investment or asset class move up or down in value in concert with another investment or asset class. Statistically, such a measure is usually done by measuring the correlation of the price movements of the two different investments or asset classes over some period of time. The correlation is scaled between 1 and -1, where 1 indicates that the two investment options move up or down in price or value together, known as "positive correlation," and -1 indicates that they move in completely opposite directions, known as "negative correlation." A correlation of 0 would mean that the movements of the two are neither positively nor negatively correlated, known as "non-correlation." That is, the investment options sometimes move up and down together and other times move in opposite directions.

For the ten-year time period between March 31, 2005 and March 31, 2015, the table below compares the monthly movements of crude oil prices versus the monthly movements of the prices of several other energy commodities, such as natural gas, diesel-heating oil, and unleaded gasoline, as well as several major non-commodity investment asset classes, such as large cap U.S. equities, U.S. government bonds and global equities. It can be seen that over this particular time period, the movement of crude oil on a monthly basis was neither strongly correlated nor inversely correlated with the movements of large cap U.S. equities, U.S. government bonds or natural gas. However, movements in crude oil were strongly correlated to movements in global equities, unleaded gasoline and diesel-heating.

U.S.

	Large Cap U.S. Equities (S&P 500)	Gov't. Bonds (EFFAS U.S. Gov't. Bond Index)	Global Equities (FTSE World Index)	Unleaded Gasoline	Diesel-Heating Oil	Natural Gas	Crude Oil

****PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS***

The table below covers a more recent, but much shorter, range of dates than the above table. Over the one-year period ended March 31, 2015, crude oil still showed neither strongly correlated nor inversely correlated movements with large cap U.S. equities, U.S. government bonds, global equities, or natural gas. Movements in crude oil were still correlated to the movements in unleaded gasoline and diesel-heating oil.

Correlation Matrix	Large Cap U.S. Equities (S&P 500)	U.S. Gov't. Bonds (EFFAS U.S. Gov't. Bond Index)	Global Equities (FTSE World Index)	Unleaded Gasoline	Diesel-Heating Oil	Natural Gas	Crude Oil

****PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS***

Investors are cautioned that the historical price relationships between crude oil and various other energy commodities, as well as other investment asset classes, as measured by correlation may not be reliable predictors of future price movements and correlation results. The results pictured above would have been different if a different range of dates had been selected. USCF believes that crude oil has historically not demonstrated a strong correlation with equities or bonds over long periods of time. However, USCF also believes that in the future it is possible that crude oil could have long-term correlation results that indicate prices of crude oil more closely track the movements of equities or bonds. In addition, USCF believes that, when measured over time periods shorter than ten years, there will always be some periods where the correlation of crude oil to equities and bonds will be either more strongly positively correlated or more strongly negatively correlated than the long-term historical results suggest.

The correlations between crude oil, natural gas, diesel-heating oil and gasoline are relevant because USCF endeavors to invest DNO's assets in Futures Contracts and Other Crude Oil-Related Investments so that daily changes in percentage terms in DNO's per share NAV correlate as closely as possible with the inverse of the daily changes in percentage terms in the price of the Benchmark Futures Contract. If certain other fuel-based commodity futures contracts do not closely correlate with the Benchmark Futures Contract, then their use could lead to greater tracking

error. As noted above, USCF also believes that the changes in percentage terms in the price of the Benchmark Futures Contract will closely correlate with changes in percentage terms in the inverse of the spot price of WTI light, sweet crude oil.

Critical Accounting Policies

Preparation of the condensed financial statements and related disclosures in compliance with accounting principles generally accepted in the United States of America requires the application of appropriate accounting rules and guidance, as well as the use of estimates. DNO's application of these policies involves judgments and actual results may differ from the estimates used.

USCF has evaluated the nature and types of estimates that it makes in preparing DNO's condensed financial statements and related disclosures and has determined that the valuation of its investments, which are not traded on a United States or internationally recognized futures exchange (such as forward contracts and OTC contracts) involves a critical accounting policy. The values which are used by DNO for its Futures Contracts are provided by its commodity broker who uses market prices when available, while OTC contracts are valued based on the present value of estimated future cash flows that would be received from or paid to a third party in settlement of these derivative contracts prior to their delivery date and valued on a daily basis. In addition, DNO estimates interest and dividend income on a daily basis using prevailing rates earned on its cash and cash equivalents. These estimates are adjusted to the actual amount received on a monthly basis and the difference, if any, is not considered material.

Liquidity and Capital Resources

DNO has not made, and does not anticipate making, use of borrowings or other lines of credit to meet its obligations. DNO has met, and it is anticipated that DNO will continue to meet, its liquidity needs in the normal course of business from the proceeds of the sale of its investments, or from the Treasuries, cash and/or cash equivalents that it intends to hold at all times. DNO's liquidity needs include: redeeming shares, providing margin deposits for its existing Futures Contracts or the purchase of additional Futures Contracts and posting collateral for its OTC contracts, if applicable, and, except as noted below, payment of its expenses, summarized below under "Contractual Obligations."

DNO currently generates cash primarily from: (i) the sale of baskets consisting of 50,000 shares ("Creation Baskets") and (ii) income earned on Treasuries, cash and/or cash equivalents. DNO has allocated substantially all of its net assets to trading in Crude Oil Interests. DNO invests in Crude Oil Interests to the fullest extent possible without being leveraged or unable to satisfy its current or potential margin or collateral obligations with respect to its investments in Futures Contracts and Other Crude Oil-Related Investments. A significant portion of DNO's NAV is held in cash and cash equivalents that are used as margin and as collateral for its trading in Crude Oil Interests. The balance of the assets is held in DNO's account at its custodian bank and in investments in Treasuries at the FCM. Income received from DNO's investments in money market funds and Treasuries is paid to DNO. During the three months ended March 31, 2015, DNO's expenses exceeded the income DNO earned and the cash earned from the sale of Creation Baskets and the redemption of Redemption Baskets. During the three months ended March 31, 2015, DNO used other assets to pay expenses, which could cause a decrease in DNO's NAV over time. To the extent expenses exceed income, DNO's NAV will be negatively impacted.

DNO's investments in Crude Oil Interests may be subject to periods of illiquidity because of market conditions, regulatory considerations and other reasons. For example, most commodity exchanges limit the fluctuations in futures contracts prices during a single day by regulations referred to as "daily limits." During a single day, no trades may be executed at prices beyond the daily limit. Once the price of a futures contract has increased or decreased by an amount equal to the daily limit, positions in the contracts can neither be taken nor liquidated unless the traders are willing to effect trades at or within the specified daily limit. Such market conditions could prevent DNO from promptly liquidating its positions in Futures Contracts. During the three months ended March 31, 2015, DNO did not purchase or liquidate any of its positions while daily limits were in effect; however, DNO cannot predict whether such an event may occur in the future.

Since the initial offering of DNO, all payments with respect to DNO's expenses were paid by USCF. DNO does not have an obligation or intention to refund such payments by USCF. USCF is under no obligation to pay DNO's current or future expenses. Since the initial offering of shares, DNO has been responsible for expenses relating to: (i) management fees, (ii) brokerage fees and commissions, (iii) licensing fees for the use of intellectual property, (iv) ongoing registration expenses in connection with offers and sales of its shares subsequent to the initial offering, (v) other expenses, including tax reporting costs, (vi) fees and expenses of the independent directors of USCF and (vii) other extraordinary expenses not in the ordinary course of business, while USCF has been responsible for expenses relating to the fees of DNO's Marketing Agent, Administrator and Custodian and registration expenses relating to the

initial offering of shares. If USCF and DNO are unsuccessful in raising sufficient funds to cover these respective expenses or in locating any other source of funding, DNO will terminate and investors may lose all or part of their investment.

Market Risk

Trading in Futures Contracts and Other Crude Oil-Related Investments, such as forwards, involves DNO entering into contractual commitments to purchase or sell crude oil at a specified date in the future. The aggregate market value of the contracts will significantly exceed DNO's future cash requirements since DNO intends to close out its open positions prior to settlement. As a result, DNO is generally only subject to the risk of loss arising from the change in value of the contracts. DNO considers the "fair value" of its derivative instruments to be the unrealized gain or loss on the contracts. The market risk associated with DNO's commitments to purchase oil is limited to the aggregate market value of the contracts held. However, should DNO enter into a contractual commitment to sell oil, it would be required to make delivery of the oil at the contract price, repurchase the contract at prevailing prices or settle in cash. Since there are no limits on the future price of oil, the market risk to DNO could be unlimited.

DNO's exposure to market risk depends on a number of factors, including the markets for oil, the volatility of interest rates and foreign exchange rates, the liquidity of the Futures Contracts and Other Crude Oil-Related Investments markets and the relationships among the contracts held by DNO. Drastic market occurrences could ultimately lead to the loss of all or substantially all of an investor's capital.

Credit Risk

When DNO enters into Futures Contracts and Other Crude Oil-Related Investments, it is exposed to the credit risk that the counterparty will not be able to meet its obligations. The counterparty for the Futures Contracts traded on the NYMEX and on most other futures exchanges is the clearinghouse associated with the particular exchange. In general, in addition to margin required to be posted by the clearinghouse in connection with cleared trades, clearinghouses are backed by their members who may be required to share in the financial burden resulting from the nonperformance of one of their members and, therefore, this additional member support should significantly reduce credit risk. Some foreign exchanges are not backed by their clearinghouse members but may be backed by a consortium of banks or other financial institutions. There can be no assurance that any counterparty, clearinghouse, or their members or their financial backers will satisfy their obligations to DNO in such circumstances.

USCF attempts to manage the credit risk of DNO by following various trading limitations and policies. In particular, DNO generally posts margin and/or holds liquid assets that are approximately equal to the market value of its obligations to counterparties under the Futures Contracts and Other Crude Oil-Related Investments it holds. USCF has implemented procedures that include, but are not limited to, executing and clearing trades only with creditworthy parties and/or requiring the posting of collateral or margin by such parties for the benefit of DNO to limit its credit exposure. An FCM, when acting on behalf of DNO in accepting orders to purchase or sell Futures Contracts on United States exchanges, is required by CFTC regulations to separately account for and segregate as belonging to DNO, all assets of DNO relating to domestic Futures Contracts trading. These FCMs are not allowed to commingle DNO's assets with their other assets. In addition, the CFTC requires commodity brokers to hold in a secure account DNO's assets related to foreign Futures Contracts trading.

If, in the future, DNO purchases OTC contracts, see "*Item 3. Quantitative and Qualitative Disclosures About Market Risk*" in this quarterly report on Form 10-Q for a discussion of OTC contracts.

As of March 31, 2015, DNO held cash deposits and investments in Treasuries and money market funds in the amount of \$14,980,387 with the custodian and FCM. Some or all of these amounts may be subject to loss should DNO's custodian and/or FCM cease operations.

Off Balance Sheet Financing

As of March 31, 2015, DNO had no loan guarantee, credit support or other off-balance sheet arrangements of any kind other than agreements entered into in the normal course of business, which may include indemnification provisions relating to certain risks that service providers undertake in performing services which are in the best interests of DNO. While DNO's exposure under these indemnification provisions cannot be estimated, they are not expected to have a material impact on DNO's financial position.

European Sovereign Debt

DNO had no direct exposure to European sovereign debt as of March 31, 2015 and has no direct exposure to European sovereign debt as of the filing of this quarterly report on Form 10-Q.

Redemption Basket Obligation

In order to meet its investment objective and pay its contractual obligations described below, DNO requires liquidity to redeem shares, which redemptions must be in blocks of 50,000 shares called "Redemption Baskets." DNO has to date satisfied this obligation by paying from the cash or cash equivalents it holds or through the sale of its Treasuries in an amount proportionate to the number of shares being redeemed.

Contractual Obligations

DNO's primary contractual obligations are with USCF. In return for its services, USCF is entitled to a management fee calculated daily and paid monthly as a fixed percentage of DNO's NAV, currently 0.60% of NAV on its average daily total net assets.

USCF agreed to pay the start-up costs associated with the formation of DNO, primarily its legal, accounting and other costs in connection with USCF's registration with the CFTC as a CPO and the registration and listing of DNO and its shares with the SEC, FINRA and NYSE Arca (formerly, AMEX), respectively. However, since DNO's initial offering of shares, offering costs incurred in connection with registering and listing additional shares of DNO have been directly borne on an ongoing basis by DNO, and not by USCF.

USCF pays the fees of DNO's marketing agent, ALPS Distributors, Inc., and the fees of the custodian and transfer agent, Brown Brothers Harriman & Co. ("BBH&Co."), as well as BBH&Co.'s fees for performing administrative services, including those in connection with the preparation of DNO's condensed financial statements and its SEC, NFA and CFTC reports. USCF and DNO have also entered into a licensing agreement with the NYMEX pursuant to which DNO and the Related Public Funds, other than BNO, USCI, CPER and USAG, pay a licensing fee to the NYMEX. DNO also pays the fees and expenses associated with its tax accounting and reporting requirements. USCF has voluntarily agreed to pay certain expenses normally borne by DNO to the extent that such expenses exceed 0.15% (15 basis points) of DNO's NAV, on an annualized basis, through at least June 30, 2015. USCF has no obligation to continue such payments into subsequent periods. This voluntary expense waiver is in addition to those amounts USCF is contractually obligated to pay as described in *Note 4 in Item 1* of this quarterly report on Form 10-Q.

In addition to USCF's management fee, DNO pays its brokerage fees (including fees to a FCM), OTC dealer spreads, any licensing fees for the use of intellectual property, and, subsequent to the initial offering, registration and other fees paid to the SEC, FINRA, or other regulatory agencies in connection with the offer and sale of shares, as well as legal, printing, accounting and other expenses associated therewith, and extraordinary expenses. The latter are expenses not incurred in the ordinary course of DNO's business, including expenses relating to the indemnification of any person against liabilities and obligations to the extent permitted by law and under the LP Agreement, the bringing or defending of actions in law or in equity or otherwise conducting litigation and incurring legal expenses and the settlement of claims and litigation. Commission payments to a FCM are on a contract-by-contract, or round turn, basis. DNO also pays a portion of the fees and expenses of the independent directors of USCF. See *Note 3* to the *Notes to Condensed Financial Statements (Unaudited)* in *Item 1* of this quarterly report on Form 10-Q.

The parties cannot anticipate the amount of payments that will be required under these arrangements for future periods, as DNO's per share NAVs and trading levels to meet its investment objective will not be known until a future date. These agreements are effective for a specific term agreed upon by the parties with an option to renew, or, in some cases, are in effect for the duration of DNO's existence. Either party may terminate these agreements earlier for certain reasons described in the agreements.

As of March 31, 2015, DNO's portfolio consisted of 324 short positions in WTI Crude Oil Futures CL Contracts traded on the NYMEX. DNO did not hold short positions on the ICE Futures as of March 31, 2015. For a list of DNO's current holdings, please see DNO's website at www.unitedstatescommodityfunds.com.

Item 3. Quantitative and Qualitative Disclosures About Market Risk.

Over-the-Counter Derivatives

DNO may purchase OTC contracts. Unlike most exchange-traded futures contracts or exchange-traded options on such futures, each party to an OTC Contract bears the credit risk that the other party may not be able to perform its obligations under its contract.

DNO may enter into certain transactions where an OTC component is exchanged for a corresponding futures contract ("Exchange for Risk" or "EFR transaction"). In the most common type of EFR transaction entered into by DNO, the OTC component is the purchase or sale of one or more baskets of DNO shares. These EFR transactions may expose DNO to counterparty risk during the interim period between the execution of the OTC component and the exchange for a corresponding futures contract. Generally, the counterparty risk from the EFR transaction will exist only on the day of execution.

Swap transactions, like other financial transactions, involve a variety of significant risks. The specific risks presented by a particular swap transaction necessarily depend upon the terms and circumstances of the transaction. In general, however, all swap transactions involve some combination of market risk, credit risk, counterparty credit risk, funding risk, liquidity risk and operational risk.

Highly customized swap transactions in particular may increase liquidity risk, which may result in a suspension of redemptions. Highly leveraged transactions may experience substantial gains or losses in value as a result of relatively small changes in the value or level of an underlying or related market factor.

In evaluating the risks and contractual obligations associated with a particular swap transaction, it is important to consider that a swap transaction may be modified or terminated only by mutual consent of the original parties and subject to agreement on individually negotiated terms. Therefore, it may not be possible for USCF to modify, terminate or offset DNO's obligations or its exposure to the risks associated with a transaction prior to its scheduled termination date.

To reduce the credit risk that arises in connection with such contracts, DNO will generally enter into an agreement with each counterparty based on the Master Agreement published by the International Swaps and Derivatives Association that provides for the netting of its overall exposure to its counterparty, if the counterparty is unable to meet its obligations to DNO due to the occurrence of a specified event, such as the insolvency of the counterparty.

USCF assesses or reviews, as appropriate, the creditworthiness of each potential or existing counterparty to an OTC Contract pursuant to guidelines approved by USCF's board of directors (the "Board"). Furthermore, USCF on behalf of DNO only enters into OTC contracts with counterparties who are, or are affiliates of, (a) banks regulated by a United States federal bank regulator, (b) broker-dealers regulated by the SEC, (c) insurance companies domiciled in the United States, or (d) producers, users or traders of energy, whether or not regulated by the CFTC. Any entity acting as a counterparty shall be regulated in either the United States or the United Kingdom unless otherwise approved by the Board after consultation with its legal counsel. Existing counterparties are also reviewed periodically by USCF. DNO will also require that the counterparty be highly rated and/or provide collateral or other credit support. Even if collateral is used to reduce counterparty credit risk, sudden changes in the value of OTC transactions may leave a party open to financial risk due to a counterparty default since the collateral held may not cover a party's exposure on the transaction in such situations.

In general, valuing OTC derivatives is less certain than valuing actively traded financial instruments such as exchange-traded futures contracts and securities or cleared swaps because the price and terms on which such OTC derivatives are entered into or can be terminated are individually negotiated, and those prices and terms may not reflect the best price or terms available from other sources. In addition, while market makers and dealers generally quote indicative prices or terms for entering into or terminating OTC contracts, they typically are not contractually obligated to do so, particularly if they are not a party to the transaction. As a result, it may be difficult to obtain an independent value for an outstanding OTC derivatives transaction.

During the three month reporting period ended March 31, 2015, DNO limited its OTC activities to EFR transactions.

DNO anticipates that the use of Other Crude Oil-Related Investments together with its investments in Futures Contracts will produce price and total return results that closely track the investment goals of DNO. However, there can be no assurance of this. OTC contracts may result in higher transaction-related expenses than the brokerage commissions paid in connection with the purchase of Futures Contracts, which may impact DNO's ability to successfully track the Benchmark Futures Contract.

Item 4. Controls and Procedures.

Disclosure Controls and Procedures

DNO maintains disclosure controls and procedures that are designed to ensure that material information required to be disclosed in DNO's periodic reports filed or submitted under the Securities Exchange Act of 1934, as amended, is recorded, processed, summarized and reported within the time period specified in the SEC's rules and forms.

The duly appointed officers of USCF, including its chief executive officer and chief financial officer, who perform functions equivalent to those of a principal executive officer and principal financial officer of DNO if DNO had any officers, have evaluated the effectiveness of DNO's disclosure controls and procedures and have concluded that the disclosure controls and procedures of DNO have been effective as of the end of the period covered by this quarterly report on Form 10-Q.

Change in Internal Control Over Financial Reporting

There were no changes in DNO's internal control over financial reporting during DNO's last fiscal quarter that have materially affected, or are reasonably likely to materially affect, DNO's internal control over financial reporting.

Part II. OTHER INFORMATION

Item 1. Legal Proceedings.

Not applicable.

Item 1A. Risk Factors.

There have been no material changes to the risk factors previously disclosed in DNO's Annual Report on Form 10-K for the fiscal year ended December 31, 2014, filed on March 26, 2015.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds.

Not applicable.

Item 3. Defaults Upon Senior Securities.

Not applicable.

Item 4. Mine Safety Disclosures.

Not applicable.

Item 5. Other Information.

Monthly Account Statements

Pursuant to the requirement under Rule 4.22 under the Commodity Exchange Act, each month DNO publishes an account statement for its shareholders, which includes a Statement of Income (Loss) and a Statement of Changes in Net Asset Value. The account statement is furnished to the SEC on a current report on Form 8-K pursuant to Section 13 or 15(d) of the Exchange Act and posted each month on DNO's website at www.unitedstatescommodityfunds.com.

Item 6. Exhibits.

Listed below are the exhibits, which are filed as part of this quarterly report on Form 10-Q (according to the number assigned to them in Item 601 of Regulation S-K):

Exhibit Number	Description of Document
31.1(1)	Certification by Principal Executive Officer Pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
31.2(1)	Certification by Principal Financial Officer Pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
32.1(1)	Certification by Principal Executive Officer Pursuant to 18 U.S.C. Section 1350, as Adopted Pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.
32.2(1)	Certification by Principal Financial Officer Pursuant to 18 U.S.C. Section 1350, as Adopted Pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.
101.INS	XBRL Instance Document.
101.SCH	XBRL Taxonomy Extension Schema.
101.CAL	XBRL Taxonomy Extension Calculation Linkbase.
101.DEF	XBRL Taxonomy Extension Definition Linkbase.
101.LAB	XBRL Taxonomy Extension Label Linkbase.
101.PRE	XBRL Taxonomy Extension Presentation Linkbase.
