TSX Venture: ASW

OTC Bulletin Board: ASWRF

Berlin Exchange: AMO

### **ANGLO SWISS COMMENCES TRADING ON THE BERLIN STOCK EXCHANGE**

Anglo Swiss Resources Inc. (TSX-Venture-ASW, OTC BB ASWRF, Berlin-AMO) commenced trading on the Berlin Exchange, in Euro dollars, under the symbol AMO .

Len Danard, President & CEO of Anglo Swiss Resources Inc. states the addition of a European listing, in conjunction with the TSX Venture Exchange and the OTC Bulletin Board (ASWRF) listing in the United States is a positive corporate development in our efforts in creating greater worldwide exposure for the Company and its Gold and Gemstone properties. Europeans have historically been strong supporters and investors in the exploration and development of gold properties and more significantly gemstone exploration throughout the world .

To-date, Anglo Swiss has discovered gem-grade sapphire, iolite, garnet, aquamarine, tourmaline, titanite, moonstone and several varieties of quartz on its Blu Starr Gemstone property, located in southern British Columbia. The geology of British Columbia is very complex and includes the favourable geological settings for hosting a wide variety of gemstones. Large areas of BC are underlain by high-grade metamorphic rocks similar to those hosting may of the gem deposits in East Africa and those believed to be the source of some of the gemstones found in the placer deposits of Sri Lanka.

Previous exploration over the last six years has confirmed that the geological setting and potential gem grades (carats per tonne) of the numerous showings are extremely promising. Proposed work programs targeting the alluvials, are in the planning/budgeting stages for the 2004 season.

The Company is also developing the historic Kenville Gold Mine, located near Nelson, British Columbia. Although the Kenville Mine has not been in production for decades, figures released in 1990 ranked it as the 26<sup>th</sup> largest gold producer in British Columbia history. British Columbia Government records indicate that between 1890 and 1954, the Kenville Mine produced 2,024,306 grams of gold (2 metric tonnes) from 181,120 tonnes of ore.

The Kenville Mine will be subject to a detailed geological evaluation to determine current and prospective ore reserves. Surface and underground exploration programs are being evaluated for the 2004 season.

On behalf of the Board,

*/s/ Len Danard"*

President & CEO
