SECURITIES AND EXCHANGE COMMISSION

Washington, D.C. 20549

FORM 10-Q

QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(D) OF THE
SECURITIES EXCHANGE ACT OF 1934

For the Quarterly Period Ended September 30, 2003

Commission file number 1-7476

AMSOUTH BANCORPORATION

(Exact Name of registrant as specified in its charter)

DELAWARE

(State or other jurisdiction of
Incorporation or Organization)

63-0591257

(I.R.S. Employer Identification No.)

AMSOUTH CENTER
1900 Fifth Avenue North
Birmingham, Alabama 35203
(Address of principal executive offices)

(205) 320-7151
(Registrant's telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes ☒ No ☐

Indicate by check mark whether the registrant is an accelerated filer (as defined in Rule 12b-2 of the Exchange Act). Yes ☐ No ☒

Edgar Filing: AMSOUTH BANCORPORATION - Form 10-Q

As of October 31, 2003, AmSouth Bancorporation had 351,069,000 shares of common stock outstanding.

Forward-Looking Statements. Statements made in this report that are not purely historical are forward-looking statements (as defined in the Private Securities Litigation Reform Act of 1995), including any statements regarding descriptions of management's plans, objectives or goals for future operations, products or services, and forecasts of its revenues, earnings or other measures of performance. Forward-looking statements are based on current management expectations and, by their nature, are subject to risks and uncertainties. A number of factors—many of which are beyond AmSouth's control—could cause actual conditions, events or results to differ significantly from those described in the forward-looking statements. Factors which could cause results to differ materially from current management expectations include, but are not limited to: execution of AmSouth's strategic initiatives; legislation and regulation; general economic conditions, especially in the Southeast; the performance of the stock and bond markets; changes in interest rates, yield curves and interest rate spread relationships; prepayment speeds within the loan and investment security portfolios; deposit flows; the cost of funds; cost of federal deposit insurance premiums; demand for loan products; demand for financial services; competition; changes in the quality or composition of AmSouth's loan and investment portfolios including capital market inefficiencies that may affect the marketability and valuation of available-for-sale securities; changes in accounting and tax principles, policies or guidelines; other economic, competitive, governmental and regulatory factors affecting AmSouth's operations, products, services and prices; unexpected judicial actions and developments; and the outcome of litigation, which is inherently uncertain and depends on the findings of judges and juries. To the extent that terrorist attacks or other hostilities, including geopolitical conflicts, cause a prolonged negative impact on the economy, the effects may include: adverse changes in customers' borrowing, investing or spending patterns; market disruptions; adverse effects on the performance of the United States and foreign equity markets; currency fluctuations; exchange controls; restriction of asset growth; negative effects on credit quality; and other effects that could adversely impact the performance, earnings,

Edgar Filing: AMSOUTH BANCORPORATION - Form 10-Q

and revenue growth of the financial services industry, including AmSouth. Forward-looking statements speak only as of the date they are made. AmSouth does not undertake a duty to update forward-looking statements to reflect circumstances or events that occur after the date the forward-looking statements are made.

AMSOUTH BANCORPORATION AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

Nine months ended September 30, 2003 and 2002

Basis of Presentation The consolidated financial statements conform to accounting principles generally accepted in the United States. The accompanying interim financial statements are unaudited; however, in the opinion of management, all adjustments necessary for the fair presentation of the consolidated financial statements have been included. All such adjustments are of a normal recurring nature. Certain amounts in the prior year's financial statements have been reclassified to conform with the 2003 presentation. These reclassifications had no effect on net income. The notes included herein should be read in conjunction with the notes to consolidated financial statements included in AmSouth Bancorporation's (AmSouth) 2002 annual report on Form 10-K.

The consolidated financial statements and notes are presented in accordance with the instructions for Form 10-Q. The consolidated financial statements include the accounts of AmSouth and those subsidiaries that are majority-owned by AmSouth and over which AmSouth exercises control. AmSouth has not consolidated any entity which is not a wholly-owned subsidiary of AmSouth. In consolidation, all significant intercompany accounts and transactions have been eliminated.

Use of Estimates The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the amounts reported in the financial statements and accompanying notes. Actual results could differ from those estimates. Material estimates that are particularly susceptible to significant change in the near term relate to the determination of the allowance for loan losses, benefit plan obligations and expenses, valuation of retained interests on the sale and securitization of loans and the valuation of derivative instruments used in hedging transactions and the corresponding value of items being hedged.

Recent Accounting Developments In November 2002, the Financial Accounting Standards Board (FASB) issued Interpretation No. 45, *Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others* (Interpretation 45). Interpretation 45 requires certain guarantees to be recorded at fair value. In general, Interpretation 45 applies to contracts or indemnification agreements that contingently require the guarantor to make payments to the guaranteed party based on changes in an underlying that is related to an asset, liability, or an equity security of the guaranteed party. The initial recognition and measurement provisions of Interpretation 45 are applicable on a prospective basis to guarantees issued or modified after December 31, 2002. On January 1, 2003, AmSouth began recording a liability and an offsetting asset for the fair value of any standby letters of credit issued by AmSouth beginning January 1, 2003. The impact of this new accounting was not material to the financial condition or results of operations of AmSouth. Interpretation 45 also requires new disclosures, even when the likelihood of making any payments under the guarantee is remote. These disclosure requirements were effective for financial statements of interim or annual periods ending after December 15, 2002. See discussion on *Guarantees* later in the Notes to Consolidated Financial Statements for additional disclosures.

In January 2003, the FASB issued Interpretation No. 46, *Consolidation of Variable Interest Entities*, an Interpretation of ARB No. 51 (Interpretation 46). Interpretation 46 addresses whether business enterprises must consolidate the financial statements of entities known as *variable interest entities*. A variable interest entity is defined by Interpretation 46 to be a business entity which has one or both of the following characteristics: (1) The equity investment at risk is not sufficient to permit the entity to finance its activities without additional support from other parties, which is provided through other interests that will absorb some or all of the expected losses of the entity; and (2) The equity

Edgar Filing: AMSOUTH BANCORPORATION - Form 10-Q

investors lack one or more of the following essential characteristics of a controlling financial interest: (a) direct or indirect ability to make decisions about the entity's activities through voting rights or similar rights, (b) the obligation to absorb the expected losses of the entity if they occur, which

Table of Contents

makes it possible for the entity to finance its activities, or (c) the right to receive the expected residual returns of the entity if they occur, which is the compensation for risk of absorbing expected losses. Interpretation 46 does not require consolidation by transferors to qualifying special purpose entities. Interpretation 46 applies immediately to variable interest entities created after January 31, 2003, and to variable interest entities in which an enterprise obtains an interest after that date. As a result of a recent amendment to the effective date of Interpretation 46, AmSouth has until the end of the fourth quarter of 2003 to apply Interpretation 46 to any variable interest entities acquired before February 1, 2003. AmSouth is currently assessing the impact of Interpretation 46. AmSouth has identified a limited liability asset management company that meets the definition of a variable interest entity which it will begin to consolidate in the fourth quarter of 2003. Under the ownership agreement, AmSouth provides one hundred percent of the funding for the operational start up of this company. Total assets of this company were \$924 thousand at September 30, 2003. AmSouth had a recorded investment on its books associated with this company of \$300 thousand, which represents AmSouth's maximum exposure to loss related to its investment in this company. Consolidation of this entity will not have a material impact on AmSouth's financial condition and results of operations. In addition to this company, AmSouth has limited partnership investments in affordable housing projects, for which it provides funding as a limited partner and receives tax credits related to its investments in the projects based on its partnership share. At September 30, 2003, AmSouth had recorded investments in other assets on its balance sheet of approximately \$50.1 million associated with limited partnership investments in affordable housing projects entered into prior to January 31, 2003. AmSouth currently adjusts the carrying value of these investments for any losses incurred by the limited partnership through earnings. AmSouth has determined that these structures meet the definition of a variable interest entity. AmSouth is currently in the process of determining which, if any, of these entities it will need to consolidate. In addition, subsequent to January 31, 2003, AmSouth invested \$10.3 million as a limited partner, in ten new affordable housing projects. AmSouth reviewed these ten new affordable housing investments and has determined that it is not required to consolidate them under the guidance of Interpretation 46. AmSouth's maximum exposure to loss on these ten affordable housing investments includes the \$10.3 million of cash already invested in these limited partnerships as well as \$26.7 million of additional committed investment funding to these limited partnerships.

In April 2003, the FASB issued Statement of Financial Accounting Standards No. 149, *Amendment of Statement 133 on Derivative Instruments and Hedging Activities* (Statement 149). The statement amends and clarifies financial accounting and reporting for derivative instruments, including certain derivative instruments embedded in other contracts, and for hedging activities under Statement of Financial Accounting Standards No. 133, *Accounting for Derivative Instruments and Hedging Activities* (Statement 133). Statement 149 is effective for contracts entered into or modified after June 30, 2003, with certain exceptions, and for hedging relationships designated after June 30, 2003. In addition, the provisions of the statement, with certain exceptions, are required to be applied prospectively. The implementation of Statement 149 did not have a material affect on AmSouth's financial condition or results of operations.

On May 15, 2003, the FASB issued Statement No. 150, *Accounting for Certain Financial Instruments with Characteristics of both Liabilities and Equity* (Statement 150). This statement requires certain financial instruments that embody obligations of the issuer and have characteristics of both liabilities and equity to be classified as liabilities. Many of these instruments previously were classified as equity or temporary equity. Statement 150 is effective for public companies for all financial instruments created or modified after May 31, 2003, and to other instruments at the beginning of the first interim period beginning after June 15, 2003. The adoption of Statement 150 did not have a material impact on AmSouth's financial condition or results of operations.

Cash Flows For the nine months ended September 30, 2003 and 2002, AmSouth paid interest of \$512.3 million and \$602.7 million, respectively. During the nine months ended September 30, 2003 and 2002, AmSouth paid income taxes of \$61.7 million and \$35.5 million, respectively. Noncash transfers from loans to foreclosed properties for the nine months ended September 30, 2003 and 2002, were \$44.5 million and \$38.1 million, respectively. Noncash transfers from foreclosed properties to loans for the nine months ended September 30, 2003 and 2002 were \$458 thousand and \$293 thousand, respectively. For the nine months ended September 30, 2003, AmSouth had noncash transfers from loans to available-for-sale and held-to-maturity securities of

Table of Contents

approximately \$405 million in connection with guaranteed mortgage loan securitizations. During the same period in 2002, AmSouth had a noncash transfer from loans to available-for-sale and held-to-maturity securities of \$301.7 million in connection with a guaranteed mortgage loan securitization.

Stock-Based Compensation AmSouth has long-term incentive compensation plans that permit the granting of incentive awards in the form of stock options, restricted stock awards and stock appreciation rights. Generally, the terms of these plans stipulate that the exercise price of options may not be less than the fair market value of AmSouth's common stock on the date the options are granted. Options generally vest between one and three years from the date of grant, with all of the 2003 option grants vesting ratably over three years. All of the options granted during the first nine months of 2003 expire ten years from the date of grant. All other options outstanding generally expire not later than ten years from the date of grant.

AmSouth has adopted the disclosure-only provisions of Statement of Financial Accounting Standards No. 123, *Accounting for Stock-Based Compensation* (Statement 123) which allows an entity to continue to measure compensation costs for those plans using the intrinsic value-based method of accounting prescribed by APB Opinion No. 25, *Accounting for Stock Issued to Employees* (APB 25). AmSouth has elected to follow APB 25 and related interpretations in accounting for its employee stock options. Accordingly, compensation cost for fixed and variable stock-based awards is measured by the excess, if any, of the fair market price of the underlying stock over the amount the individual is required to pay. Compensation cost for fixed awards is measured at the grant date, while compensation cost for variable awards is estimated until both the number of shares an individual is entitled to receive and the exercise or purchase price are known (measurement date). No option-based employee compensation cost is reflected in net income, as all options granted had an exercise price equal to the market value of the underlying common stock on the date of grant. AmSouth does, however, currently recognize compensation expense related to restricted stock issuances as disclosed in the table below. The pro forma information below was determined as if AmSouth had accounted for all employee stock-based awards under the fair value method of Statement 123. For purposes of pro forma disclosures, the estimated fair value of the options and restricted stock awards is amortized to expense over the awards vesting period. AmSouth's pro forma information follows (in thousands except earnings per share information):

	For the nine months ended	
	September 30, 2003	September 30, 2002
Net income:		
As reported	\$ 467,569	\$ 453,940

Pro forma	\$.43	\$.42

This pro forma information includes expenses related to all stock options granted during the first nine months of 2003 and 2002, as well as the expense related to the unvested portion of prior year grants and assumes that the fair value for these options was estimated at the date of grant using a Black-Scholes option pricing model with the following weighted-average assumptions for the nine months ending September 30, 2003 and 2002, respectively: a risk-free interest rate of 3.81% and 4.93%, a dividend yield of 4.49% and 4.36%, a volatility factor of 31.40% and 31.39%, and a weighted-average expected life of 7.0 years for both periods. The weighted-average fair value of options granted during the nine months ended September 30, 2003 and 2002 was \$4.49 and \$4.94, respectively. The estimated fair value of the options is then amortized to expense over the options vesting period to determine the expense for the periods.

Derivatives In accordance with Statement 133, AmSouth recognizes all of its derivative instruments as either assets or liabilities in the statement of financial condition at fair value. For those derivative instruments that are designated and qualify as hedging instruments, AmSouth designates the hedging instrument, based upon the exposure being hedged, as either a fair value hedge or a cash flow hedge. Derivative instruments designated in a hedge relationship to mitigate exposure to changes in the fair value of an asset, liability or firm commitment attributable to a particular risk, such as interest rate risk, are considered fair value hedges under Statement 133. Derivative instruments designated in a hedge relationship to mitigate exposure to variability in expected future cash flows or other types of forecasted transactions are considered cash flow hedges.

For derivative instruments that are designated and qualify as fair value hedges, the gain or loss on the derivative instrument as well as the offsetting loss or gain on the hedged item attributable to the hedged risk are recognized in other noninterest revenue during the period of the change in fair values. For derivative instruments that are designated and qualify as cash flow hedges, the effective portion of the gain or loss on the derivative instrument is reported as a component of other comprehensive income and reclassified into earnings in the same period or periods during which the hedged transaction affects earnings. The remaining gain or loss on the derivative instrument in excess of the cumulative change in the present value of future cash flows of the hedged item, if any, is recognized in other noninterest revenue during the period of change. For derivative instruments not designated as hedging instruments, the gain or loss is recognized in current earnings during the period of change.

AmSouth, at the hedge's inception and at least quarterly thereafter, performs a formal assessment to determine whether changes in the fair values or cash flows of the derivative instruments have been highly effective in offsetting changes in the fair values or cash flows of the hedged items and whether they are expected to be highly effective in the future. If it is determined a derivative instrument has not been or will not continue to be highly effective as a hedge, hedge accounting is discontinued prospectively, and the derivative instrument

Table of Contents

continues to be carried at fair value with all changes in fair value being recorded in noninterest revenue, but with no corresponding offset being recorded on the hedged item or in other comprehensive income for cash flow hedges.

Fair Value Hedging Strategy AmSouth has entered into interest rate swap agreements for interest rate risk exposure management purposes. The interest rate swap agreements utilized by AmSouth effectively modify AmSouth's exposure to interest rate risk by converting a portion of AmSouth's fixed-rate certificates of deposit to floating rate. AmSouth also has interest rate swap agreements which effectively convert portions of its fixed-rate long-term debt to floating rate. During the nine months ended September 30, 2003 and 2002, AmSouth recognized a net loss of \$561 thousand and \$2.4 million, respectively, related to the ineffective portion of its hedging instruments.

Cash Flow Hedging Strategy AmSouth has entered into interest rate swap agreements that effectively convert a portion of its floating-rate loans to a fixed-rate basis, thus reducing the impact of interest-rate changes on future interest income. Approximately \$1.5 billion and \$350 million of AmSouth's loans were designated as the hedged items to interest rate swap agreements at September 30, 2003 and 2002, respectively. During the nine months ended September 30, 2003 and 2002, AmSouth recognized a net loss of \$1 thousand and \$48 thousand, respectively, related to the ineffective portion of its hedging instruments.

Guarantees AmSouth, as part of its ongoing business operations, issues financial guarantees in the form of financial and performance standby letters of credit. Standby letters of credit are contingent commitments issued by AmSouth generally to guarantee the performance of a customer to a third party. A financial standby letter of credit is a commitment by AmSouth to guarantee a customer's repayment of an outstanding loan or debt instrument. In a performance standby letter of credit, AmSouth guarantees a customer's performance under a contractual nonfinancial obligation for which it receives a fee. AmSouth has recourse against the customer for any amount it is required to pay to a third party under a standby letter of credit. Revenues are recognized ratably over the life of the standby letter of credit. At September 30, 2003, AmSouth had standby letters of credit outstanding with maturities ranging from less than one year to eleven years. The maximum potential amount of future payments AmSouth could be required to make under its standby letters of credit at September 30, 2003 was \$2.9 billion and represents AmSouth's maximum credit risk. At September 30, 2003, AmSouth had \$9.8 million of liabilities and \$9.8 million of receivables associated with standby letters of credit agreements entered into subsequent to December 31, 2002 as a result of AmSouth's adoption of Interpretation 45 at January 1, 2003. Standby letters of credit agreements entered into prior to January 1, 2003, have a carrying value of zero. AmSouth holds collateral to support standby letters of credit when deemed necessary.

AmSouth Investment Services, Inc. (AIS), a subsidiary of AmSouth, guarantees the margin account balances issued by its brokerage clearing agent on behalf of AIS's customers. If a customer defaults on the margin account, AIS has guaranteed to the brokerage clearing agent to buy in the account so as to bring the account into compliance with applicable margin or maintenance requirements. The margin account balance as of September 30, 2003 was \$26 million. The total potential margin guarantee for AIS was \$217.3 million as of September 30, 2003, which is equal to 70% of customers' account balances. In the event a customer defaults, AmSouth would have recourse to the customer. AmSouth has no liability recorded on its balance sheet related to this agreement. Interpretation 45 does not require AmSouth to record a liability associated with this guarantee agreement as this agreement was in place prior to January 1, 2003.

Contingencies Various legal proceedings are pending against AmSouth and its subsidiaries. Some of these proceedings seek relief or allege damages that are substantial. The actions arise in the ordinary course of AmSouth's business and include actions relating to its imposition of certain fees, lending, collections, loan servicing, deposit taking, investment, trust and other activities. Because some of these actions are complex and for other reasons, it may take a number of years to finally resolve them. Although it is not possible to determine

Table of Contents

with certainty AmSouth's potential exposure from these proceedings, based upon legal counsel's opinion, management considers that any liability resulting from the proceedings would not have a material impact on the financial condition or results of operations of AmSouth.

AmSouth's federal and state income tax returns are subject to review and examination by government authorities. In the normal course of these examinations, AmSouth is subject to challenges from federal and state authorities regarding amounts of taxes due. These challenges may alter the timing or amount of taxable income or deductions, or the allocation of income among tax jurisdictions. AmSouth is currently under examination by a number of the states in which it does business. AmSouth is also under examination by the Internal Revenue Service (IRS) for the years ended December 31, 1998, September 30, 1999, and December 31, 1999. In connection with this examination, the IRS has issued Notices of Proposed Adjustments with respect to AmSouth's tax treatment of certain leveraged lease transactions that were entered into during the years under examination. Management believes that AmSouth's treatment of these leveraged lease transactions was in compliance with existing tax laws and regulations and intends to vigorously defend its position. Management does not expect that resolution of the state or IRS audit issues will have a material impact on AmSouth's financial position or operating results.

Comprehensive Income Total comprehensive income was \$82.3 million and \$350.7 million for the three and nine months ended September 30, 2003 and \$180.5 million and \$529.3 million for the three and nine months ended September 30, 2002. Total comprehensive income consists of net income, the change in the unrealized gains or losses on AmSouth's available-for-sale securities portfolio arising during the period, the effective portion of cash flow hedges marked to market and a minimum pension liability related to an unfunded pension liability.

Earnings Per Common Share The following table sets forth the computation of earnings per common share and diluted earnings per common share:

	Three Months Ended		Nine Months Ended	
	September 30		September 30	
	2003	2002	2003	2002
(In thousands except per share data)

Denominator:				
Average common shares outstanding	349,421	357,567	350,294	359,653
Dilutive shares contingently issuable	3,896	4,394	3,677	4,544
Average diluted common shares outstanding	353,317	361,961	353,971	364,197
Diluted earnings per common share	\$.45	\$.43	\$ 1.32	\$ 1.25

Shareholders' Equity On April 17, 2003, AmSouth's Board of Directors approved a plan to repurchase up to 25 million shares of the company's outstanding common stock. The common shares may be repurchased in the open market or in privately negotiated transactions. The reacquired common shares will be held as treasury shares and may be reissued for various corporate purposes, including employee benefit programs.

Edgar Filing: AMSOUTH BANCORPORATION - Form 10-Q

Through September 30, 2003, AmSouth has repurchased 278 thousand shares at a cost of \$5.9 million. In addition, during the first nine months of 2003, AmSouth repurchased approximately 7.7 million of its shares at a cost of \$156.9 million under a stock repurchase plan approved by AmSouth's Board of Directors in September 2001 to

Table of Contents

repurchase up to 25 million shares of its outstanding common stock over a two year period. The total shares repurchased under the September 2001 authorization through September 30, 2003 was 23.2 million shares at a cost of \$ 470.2 million. The September 2001 share repurchase authorization expired during the third quarter of 2003. Cash dividends of \$.23 per common share were declared in the third quarter of 2003. This represents a five percent increase over the dividend declared during the third quarter of 2002.

Business Segment Information AmSouth has three reportable segments: Consumer Banking, Commercial Banking, and Wealth Management. Treasury & Other includes balance sheet management activities that include the investment portfolio, non-deposit funding and the impact of derivatives used in asset/liability management. Income from bank owned life insurance policies, gains and losses related to the ineffective portion of derivative hedging instruments, net gains and losses on sales of fixed assets, taxable-equivalent adjustments associated with lease residual option benefits, the amortization of deposit intangibles and corporate expenses such as corporate overhead are also shown in Treasury & Other. In addition, Treasury & Other includes the reversal of revenues and expenses associated with Private Client Service (PCS) customers loans and deposit balances to eliminate any double counting which occurs as a result of including these revenues and expenses in the Wealth Management segment as well as in either the Commercial or Consumer segments. During the third quarter of 2003, AmSouth changed the way it allocates internal funding credits for deposits for segment reporting purposes. AmSouth changed its methodology to better capture the impact of changes in interest rates on the values of certain deposit products for each segment. Accordingly, AmSouth has adjusted its year-to-date 2003 and 2002 segment information to reflect this new methodology. The following is a summary of the segment performance for the three and nine months ended September 30, 2003 and 2002:

	Consumer Banking	Commercial Banking	Wealth Management	Treasury & Other	Total

INDEPENDENT ACCOUNTANTS' REVIEW REPORT

The Board of Directors

AmSouth Bancorporation

We have reviewed the accompanying consolidated statements of condition of AmSouth Bancorporation and subsidiaries as of September 30, 2003 and 2002, and the related consolidated statements of earnings for the three-month and nine-month periods ended September 30, 2003 and 2002, the consolidated statements of cash flows for the nine-month periods ended September 30, 2003 and 2002, and the consolidated statement of shareholders' equity for the nine-month period ended September 30, 2003. These financial statements are the responsibility of the Company's management.

We conducted our reviews in accordance with the standards established by the American Institute of Certified Public Accountants. A review of interim financial information consists principally of applying analytical procedures to financial data, and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with auditing standards generally accepted in the United States, which will be performed for the full year with the objective of expressing an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

Based on our reviews, we are not aware of any material modifications that should be made to the accompanying consolidated financial statements referred to above for them to be in conformity with accounting principles generally accepted in the United States.

We have previously audited, in accordance with auditing standards generally accepted in the United States, the consolidated statement of condition of AmSouth Bancorporation and subsidiaries as of December 31, 2002, and the related consolidated statements of earnings, shareholders' equity, and cash flows for the year then ended (not presented herein) and in our report dated January 14, 2003, we expressed an unqualified opinion on those consolidated financial statements. In our opinion, the information set forth in the accompanying consolidated statement of condition as of December 31, 2002 is fairly stated, in all material respects, in relation to the consolidated statement of condition from which it has been derived.

Birmingham, Alabama

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

Overview

This discussion and analysis is part of our Quarterly Report on Form 10-Q to the Securities and Exchange Commission (SEC) and updates our Annual Report on Form 10-K for the year ended December 31, 2002, which we previously filed with the SEC. You should read this information together with the financial information contained in the 10-K. Certain prior period amounts presented in this discussion and analysis have been reclassified to conform to current period classifications.

AmSouth Bancorporation (AmSouth) is a regional bank holding company headquartered in Birmingham, Alabama, with approximately \$44 billion in assets, over 600 branch banking offices and more than 1,200 ATMs. AmSouth operates in Tennessee, Alabama, Florida, Mississippi, Louisiana and Georgia. AmSouth is a leader among regional banks in the Southeast in several key businesses, such as Consumer Banking which includes small business banking and mortgage lending, Commercial Banking, including equipment leasing, and Wealth Management, which includes annuity and mutual fund sales, trust and investment management services.

The preparation of consolidated financial statements requires management to make judgments in the application of certain of its accounting policies that involve significant estimates and assumptions about the effect of matters that are inherently uncertain. These estimates and assumptions are based on information available as of the date of the financial statements, and may materially impact the reported amounts of certain assets, liabilities, revenues and expenses as the information changes over time. Accordingly, different amounts could be reported as a result of the use of revised estimates and assumptions in the application of these accounting policies.

Accounting policies considered relatively more critical due to either the subjectivity involved in the estimate and/or the potential impact that changes in the estimates can have on the reported financial results include the accounting for the allowance for loan losses, sales of financial assets, pension accounting, and hedge accounting. Information concerning these policies is included in the Critical Accounting Estimates section of Management's Discussion and Analysis in AmSouth's 2002 10-K. There were no significant changes in these accounting policies during the first nine months of 2003.

This discussion and analysis contains statements that are considered forward-looking statements as defined in the Private Securities Litigation Reform Act of 1995. See page 2 for additional information regarding forward-looking statements.

AmSouth reported net income for the quarter ended September 30, 2003 of \$157.4 million, or \$.45 per share on a diluted basis and \$467.6 million, or \$1.32 per share on a diluted basis for the first nine months of 2003. In the same periods a year ago, net income totaled \$156.0 million, or \$.43 per share on a diluted basis, and \$453.9 million, or \$1.25 per diluted share, respectively. For the three months and nine months ended September 30, 2003, AmSouth's return on average assets (ROA) was 1.44 percent and 1.49 percent, respectively, compared to 1.60 percent and 1.59 percent, respectively, for the same periods in 2002. Return on average equity (ROE) was 20.18 percent and 20.13 percent for the third quarter and first nine months of 2003, respectively, compared to 20.19 percent and 20.13 percent for the same periods last year.

Results for the third quarter and first nine months of 2003 were impacted by the sluggish economy and low interest rate environment resulting in lower net interest income (NII) and consumer investment services income compared to the same periods in 2002. In spite of this challenging environment, notable improvements during the third quarter and the first nine months of 2003 included growth in commercial, home equity and

Edgar Filing: AMSOUTH BANCORPORATION - Form 10-Q

residential mortgage loans and in deposits and a reduced level of credit costs. AmSouth experienced growth in noninterest expenses (NIE), primarily associated with increases in personnel and occupancy costs associated with growth initiatives and the transition into a new operations center.

Table of Contents

Statement of Condition

Total assets at September 30, 2003 were \$44.3 billion, up 9.3 percent from \$40.6 billion at December 31, 2002. This \$3.8 billion increase in total assets was primarily the result of increases in AmSouth's loan portfolio, and its available-for-sale (AFS) and held-to-maturity (HTM) securities portfolios. Loans net of unearned income at September 30, 2003 increased \$1.8 billion compared to year-end. This increase was attributable to \$1.1 billion of growth in consumer loans and a \$671.8 million increase in commercial and commercial real estate loans. The increase in consumer loans was driven by increases in home equity and residential mortgage lending. The increase in home equity lending reflected AmSouth's continued efforts to attract these loans due to their attractive spreads, historically low levels of losses and their continuation as a core relationship product. The origination of residential mortgage loans continued to be strong reflecting AmSouth's emphasis on residential mortgage lending and higher demand as a result of the continued low interest rate environment. In 2003, AmSouth successfully completed several initial steps related to its mortgage initiative that included training branch personnel and establishing an automated mortgage application system in the branches. AmSouth also hired additional teams of mortgage loan officers and plans to continue to add new people in sales and administrative areas to support this initiative. Production of new residential mortgage loans was more than \$3.6 billion during the first nine months of 2003. A key driver of this activity was referrals from branches, which totaled about \$1.1 billion for the first nine months of 2003. The growth in commercial lending reflected a continuation in the momentum in commercial loan activity that began in the fourth quarter of 2002. The increase in commercial lending was spread across most categories led by growth in commercial real estate lending. The increase in AmSouth's securities portfolios reflected additional purchases of securities, primarily mortgage-backed and collateralized mortgage obligation (CMO) securities, during the first nine months of 2003 and the securitization and retention of approximately \$405 million of residential mortgages.

On the liability side of the balance sheet, total deposits at September 30, 2003, increased by \$2.2 billion compared to December 31, 2002. The increase in total deposits was seen in all categories of deposits. Low-cost deposits, which include noninterest-bearing and interest-bearing checking, money market and savings accounts, increased by \$1.1 billion. Growth in low-cost deposits was primarily associated with AmSouth's continuing initiative to grow deposits. This initiative included sales and advertising campaigns targeted to deposit products, as well as incentive programs related to deposit growth. Low-cost deposit growth was also impacted by the current low interest rate environment which reduced the attractiveness of other nondeposit investment alternatives. Time deposits, including certificates of deposits of \$100,000 or more, increased by \$835.0 million compared to year-end 2002. The increase in time deposits was associated with an initiative instituted in the first quarter of 2003 to grow time deposits by \$1.0 billion. In addition, the increase included a \$421 million increase in public time deposit funds. The increase in Federal funds purchased and securities sold under agreements to repurchase is primarily the result of AmSouth electing to use this shorter term financing to replace long-term FHLB financing which matured during the third quarter. During the first quarter of 2003, AmSouth issued \$500 million of subordinated debt which resulted in an increase in the level of long-term debt. The subordinated debt issued matures 10 years from the date of issuance. The increase in accrued expenses and other liabilities at September 30, 2003 compared to year-end was primarily the result of a \$444 million increase in liabilities associated with the purchase of investment securities which had not yet settled at the end of September.

Net Interest Income

Net interest income (NII) on a fully taxable equivalent basis for the three and nine months ended September 30, 2003, was \$354.3 million and \$1.1 billion, respectively, down \$22.7 million, or 6.0 percent compared to the same quarter last year and down \$61.3 million or 5.3 percent on a year-to-date basis. The decrease in NII reflected compression in the net interest margin (NIM), somewhat offset by higher average interest-earning assets. The NIM was 3.60 percent for the third quarter of 2003, down 68 basis points from 4.28 percent, for the same quarter in 2002. The decline in the NIM can be largely attributed to tightening of the interest rate spreads between loans and deposits. In addition, the low interest rate environment during the first nine months of 2003 resulted in significantly lower reinvestment yields for both loans and investment securities.

Table of Contents

At the same time, high levels of security prepayments and run-off of higher yielding fixed-rate loans continued causing slower than anticipated growth in earning assets and higher premium amortization on securities. See additional discussion of prepayment risk within the Asset/Liability Management section. These events combined to decrease net interest income and compress the net interest margin.

Growth in interest-earning assets partially offset the decline in NII associated with the lower NIM. Average interest-earning assets for the three and nine month periods ended September 30, 2003 were \$39.1 billion and \$37.9 billion, respectively, an increase of \$4.1 billion and \$3.4 billion from the same periods in 2002. As discussed above, the increase came principally from growth in the loan and the investment securities portfolios. The growth in the loan portfolio was primarily driven by commercial lending, residential mortgage production and equity lending. The increase in investment securities was primarily associated with purchases of mortgage-backed and CMO securities. The growth in earning assets was primarily funded by an increase in deposits. The increase in deposits was across all categories of deposits. In addition, AmSouth funded part of the increase through higher levels of FHLB long-term advances and the issuance of subordinated debt in the first quarter of 2003.

Asset/Liability Management

AmSouth maintains a formal asset and liability management process to quantify, monitor and control interest rate risk and to assist management in minimizing the income impact of varying interest rate environments. AmSouth accomplishes this process through the development and implementation of lending, funding, pricing and hedging strategies designed to maximize NII performance under varying interest rate environments subject to specific liquidity and interest rate risk guidelines.

An earnings simulation model is the primary tool used to assess the direction and magnitude of changes in NII resulting from changes in interest rates. Key assumptions in the model include prepayment speeds on mortgage-related assets; cash flows and maturities of derivatives and other financial instruments held for purposes other than trading; changes in market conditions, loan volumes and pricing; deposit volume, mix and rate sensitivity; customer preferences; and management's financial and capital plans. These assumptions are inherently uncertain, and, as a result, the model cannot precisely estimate NII or precisely predict the impact of higher or lower interest rates on NII. Actual results will differ from simulated results due to timing, magnitude and frequency of interest rate changes and changes in market conditions and management's strategies, among other factors.

AmSouth evaluates net interest income under various balance sheet and interest rate scenarios, using its simulation analysis model. Management evaluates base net interest income under what is believed to be the most likely balance sheet structure and current interest rate environment. This base case is then evaluated against various changes in interest rate scenarios. Asset prepayment levels, the shape of yield curves and the overall balance sheet mix and growth assumptions are adjusted to be consistent with each interest rate scenario. One scenario of the simulation model reviews the impact to NII if interest rates gradually increased or decreased by 100 basis points over a 12-month period. Based on the results of the simulation model as of September 30, 2003, AmSouth would expect NII to increase \$2.5 million or approximately 0.2 percent and decrease \$15.0 million or approximately 1.0 percent if interest rates gradually increase or decrease, respectively, from current rates by 100 basis points over a 12-month period. This scenario indicates that AmSouth is slightly asset sensitive. It is important to note that, given the current low level of interest rates, the down 100 basis point scenario implies a federal funds target interest rate of zero percent. By comparison, as of September 30, 2002, the simulation model indicated that NII would increase \$12.5 million or approximately 0.8 percent and decrease \$14.2 million or approximately 1.0 percent if interest rates gradually increased or decreased, respectively, from their then-current rates by 100 basis points over a 12-month period. The decrease in interest sensitivity between years can be attributed to growth in the residential mortgage loan portfolio and investments. AmSouth's current level of interest rate risk is well within its policy guidelines. Current policy states that NII should not fluctuate more than 2.5 percent in the event that interest rates gradually increase or decrease 100 basis points over a period of twelve months. In analyzing its interest rate risk, AmSouth also runs additional scenarios to stress the

Table of Contents

assumptions used in the analysis above. For example, the simulations above are based on a parallel shift in the yield curve for U.S. Treasury securities occurring gradually over a 12-month time period. AmSouth, however, recognizes that changes in the yield curve can also affect NII even if Federal Reserve-set short term rates remain unchanged. NII at AmSouth, as at most other banks, is affected if long term rates rise or fall more rapidly than short term rates, and thereby cause the slope of the yield curve to change. For example, if long term rates were to fall faster than short term rates, thereby causing a flattening in the slope of the yield curve, this would negatively affect NII as mortgage-related and other fixed rate loans and securities, which are priced based on long term rates, would be prepaid while the proceeds from such prepayments could likely not be reinvested at comparable rates. Accordingly, one of the stress tests regularly run by AmSouth is an immediate shift in the five years and beyond Treasury yield curve with all other short term interest rates unchanged. Based on the results of this modeling as of September 30, 2003, an immediate 50 basis point downward shift in the Treasury curve, if sustained for 12 months, would cause NII to decrease by approximately \$17 million.

As part of its activities to manage interest rate risk, AmSouth utilizes various derivative instruments such as interest rate swaps to hedge its interest rate risk. At September 30, 2003, AmSouth had interest rate swaps in the notional amount of approximately \$2.7 billion, all of which were receive fixed/pay floating rate swaps. Of these swaps, \$1.5 billion of notional value was used to hedge the cash flow of variable-rate commercial loans and \$1.1 billion of notional value was used to hedge the fair value of fixed-rate consumer certificates of deposit and corporate and bank debt. AmSouth also had \$125 million notional value of swaps that no longer qualified for hedge accounting. These swaps had previously been designated as fair value hedges of corporate debt. During the first half of 2003, these hedging relationships were determined to no longer be highly effective as defined by Statement of Financial Accounting Standards No. 133 and AmSouth ceased hedge accounting for these swaps. All of the swaps that lost hedge accounting mature within six months. Interest rate swaps with notional value of \$50 million matured during the third quarter of 2003. There are \$25 million notional amount of receive fixed/pay floating interest rate swaps scheduled to mature during the remainder of 2003.

In addition to using derivative instruments as an interest rate risk management tool, AmSouth also utilizes derivatives such as interest rate swaps, caps, floors and foreign exchange contracts in its capacity as an intermediary on behalf of its customers. AmSouth minimizes its market and liquidity risks by taking offsetting positions. AmSouth manages its credit risk, or potential risk of loss from default by counterparties, through credit limit approval and monitoring procedures. Market value changes on intermediated swaps and other derivatives are recognized in income in the period of change. At September 30, 2003, AmSouth had \$107.1 million of assets and \$106.3 million of liabilities associated with \$2.1 billion notional amount of interest rate contracts with corporate customers and \$2.1 billion notional amount of offsetting interest rate contracts with other financial institutions to hedge AmSouth's rate exposure on its corporate customers' contracts.

As part of its asset and liability management process, AmSouth actively monitors its exposure to prepayment risk. AmSouth, like most financial institutions, is subject to prepayment risk in falling interest rate environments. Prepayment risk is a significant risk to earnings and specifically to NII. For example, mortgage loans and other financial assets may be prepaid by a debtor so that the debtor may refund its obligations at new, lower rates. As loans and other financial assets prepay, AmSouth must reinvest these funds in the current lower yielding rate environment. Prepayments of assets carrying higher rates reduce AmSouth's interest income and overall asset yields. Conversely, in a rising rate environment, these assets will prepay at a slower rate resulting in opportunity cost by not having the cash flow to reinvest at higher rates. Higher prepayments also impact the securities portfolio by increasing the amortization of any premiums associated with those securities, which also reduces interest income and the yield of the securities portfolio. Tools to hedge prepayment risk are limited and generally involve complex derivatives that AmSouth has chosen not to utilize.

AmSouth's greatest exposure to prepayment risks primarily rests in its mortgage loan portfolio and its mortgage-backed and CMO securities portfolio. At September 30, 2003, AmSouth had approximately \$3.6 billion in mortgage loans. In addition, AmSouth had \$5 billion of CMOs and approximately \$5 billion of mortgage-backed securities in its AFS and HTM portfolios with approximately \$152 million of net unamortized

Table of Contents

premiums. Net cash flows from prepayment activity in the third quarter of 2003 increased approximately \$400 million from that experienced in the first and second quarters of 2003. This increase in prepayment activity resulted in an increase in net premium amortization in the CMO and mortgage-backed securities portfolio. During the third quarter and first nine months of 2003, net premium amortization related to the CMO and mortgage-backed securities portfolio was \$21.5 million and \$37.8 million, respectively, compared to \$146 thousand net premium amortization and \$2.0 million net discount accretion, respectively, for the corresponding periods in 2002. AmSouth estimates the impact of prepayments, including the accelerated premium amortization associated with its investment portfolio, to be a reduction to the NIM for the full year of 16 to 20 basis points as compared to the full year of 2002. This estimate assumes a decline in prepayment speeds in the fourth quarter of 2003.

Liquidity Management

AmSouth's goal in liquidity management is to satisfy the cash flow requirements of depositors and borrowers while at the same time meeting its cash flow needs. This is accomplished through the active management of both the asset and liability sides of the balance sheet. The liquidity position of AmSouth is monitored on a daily basis by AmSouth's Treasury Division. In addition, the Asset/Liability Committee, which consists of members of AmSouth's senior management team, reviews liquidity on a regular basis and approves any changes in strategy that are necessary as a result of balance sheet or anticipated cash flow changes. Management also compares, on a monthly basis, AmSouth's liquidity position to established corporate liquidity guidelines.

The primary sources of liquidity on the asset side of the balance sheet are maturities and cash flows from loans and investments as well as the ability to securitize or sell certain loans and investments. Liquidity on the liability side is generated primarily through growth in core deposits and the ability to obtain economical wholesale funding in national and regional markets through a variety of sources, including the Federal Home Loan Bank. See Table 10 for a breakout by maturity date of AmSouth's contractual obligations and other commercial commitments.

As an additional source of liquidity, AmSouth periodically sells loans or pools of loans to qualifying special purpose entities called conduits in securitization transactions. The conduits are financed by the issuance of securities to asset-backed commercial paper issuers and are accounted for as sales. These transactions allow AmSouth to utilize its balance sheet capacity and capital for higher yielding, interest-earning assets, while continuing to manage the customer relationship. At September 30, 2003, the outstanding balance of loans sold to conduits was approximately \$1.7 billion, including \$747 million of commercial loans, \$881 million of residential first mortgages and \$108 million of dealer indirect automobile loans. This balance was down from \$2.5 billion in outstanding loan balances in conduits at December 31, 2002. AmSouth provides credit enhancements to these securitizations by providing standby letters of credit, which create exposure to credit risk to the extent of the letters of credit. At September 30, 2003, AmSouth had \$97.9 million of letters of credit supporting the conduit transactions. This credit risk is reviewed quarterly and a reserve for loss exposure is maintained in other liabilities.

AmSouth also provides liquidity lines of credit to support the issuance of commercial paper under 364-day commitments associated with these conduit transactions. These liquidity lines can be drawn upon in the unlikely event of a commercial paper market disruption or other factors, such as credit rating downgrades of one of the asset-backed commercial paper issuers or of AmSouth as the provider of liquidity and credit support, which could prevent the asset-backed commercial paper issuers from being able to issue commercial paper. At September 30, 2003, AmSouth had liquidity lines of credit supporting these transactions of \$1.7 billion. To date, there have been no drawdowns of the liquidity lines; however, AmSouth includes this liquidity risk in its monthly liquidity risk analysis to ensure that it would have sufficient sources of liquidity to meet demand. AmSouth also reviews the impact of the potential drawdown of the liquidity lines on its regulatory capital requirements. As of September 30, 2003, this analysis showed that AmSouth would retain its well-capitalized position even if the liquidity lines were completely drawn down or if accounting rules were to be changed to require AmSouth to consolidate the conduits.

Table of Contents

Credit Quality

AmSouth maintains an allowance for loan losses which management believes is adequate to absorb losses inherent in the loan portfolio. A formal review is prepared quarterly to assess the risk in the portfolio and to determine the adequacy of the allowance for loan losses. The review includes analyses of historical performance, the level of nonperforming and adversely rated loans, specific analyses of certain problem loans, loan activity since the previous quarter, reports prepared by the Credit Review Department, consideration of current economic conditions, and other pertinent information. The level of allowance to net loans outstanding will vary depending on the overall results of this quarterly review. The review is presented to and subsequently approved by senior management and reviewed by the Audit Committee of the Board of Directors.

Table 5 presents a five-quarter analysis of the allowance for loan losses. At September 30, 2003, the allowance for loan losses was \$384.1 million, or 1.32 percent of loans net of unearned income, compared to \$379.9 million, or 1.45 percent, at September 30, 2002 and \$381.6 million, or 1.40 percent, at December 31, 2002. The coverage ratio of the allowance for loan losses to nonperforming loans was 318 percent at September 30, 2003, an increase from the September 30, 2002 ratio of 251 percent. The increase in the allowance at September 30, 2003 versus September 30, 2002 primarily reflected an increase in loan loss exposure as loan balances have increased over prior year levels, while decreases in the allowance as a percentage of loans reflects an overall improvement in the credit quality of the loan portfolio and the changing portfolio mix toward loans with lower inherent loss characteristics.

Net charge-offs for the quarter ended September 30, 2003, were \$41.8 million, or 0.58 percent of average loans, on an annualized basis, a decrease of \$1.2 million from the \$42.9 million, or 0.66 percent of average loans, reported in the same period a year earlier. For the nine months ended September 30, 2003, net charge-offs were \$126.7 million, or 0.60 percent, compared to \$143.8 million, or 0.75 percent, for the same period of 2002. The decrease in net charge-offs was primarily the result of a decrease in commercial net charge-offs. The decrease in commercial charge-offs reflected an overall improvement in the performance of the commercial portfolio. For the third quarter and first nine months of 2003, commercial real estate net charge-offs increased by \$1.1 million and \$1.8 million, respectively, compared to the same periods in 2002. This increase was primarily the result of one large real estate charge-off related to a nursing home taken in the third quarter of 2003. For the third quarter, consumer charge-offs increased \$897 thousand compared to the same period in 2002 and \$365 thousand for the first nine months of 2003 compared to the same period in 2002. The increase in both quarterly and year-to-date net charge-offs in the consumer portfolio primarily reflected higher net charge-offs within the equity lending portfolios. Net charge-offs in the equity lending portfolio were \$10.4 million for the third quarter of 2003 and \$26.6 million for the first nine months of 2003, an increase of \$2.8 million and \$6.6 million, respectively, from the corresponding periods in 2002. The increase in equity lending charge-offs was primarily attributable to the impact of the current economic downturn on consumers, growth in the portfolio and charge-offs on a portion of the portfolio originated in 2000 and early 2001 using credit underwriting criteria that were subsequently made more rigorous. In addition, the level of equity lending charge-offs was impacted by a higher level of bankruptcy filings and a shift in the mix of bankruptcy filings to include more Chapter 7 liquidation filings than Chapter 13 reorganization filings. Partially offsetting the increase in equity lending charge-offs was a decrease in net charge-offs within the dealer indirect portfolio. The decreases in net charge-offs in the dealer indirect portfolio were \$1.9 million and \$5.3 million for the three month and nine month periods ended September 30, 2003 compared to the corresponding periods in 2002. The improvement in net charge-offs reflects enhanced credit controls which included more stringent underwriting standards implemented by AmSouth in 2001 and 2002. The provision for loan losses for the third quarter and first nine months of 2003 was \$41.8 million and \$129.2 million, respectively, compared to \$51.4 million and \$160.1 million for the corresponding year-earlier periods. The decrease in the provision for loan losses is consistent with the overall improvement in the credit quality of AmSouth's loan portfolio and a shift in the mix of the loan portfolio to include a larger proportion of residential mortgages.

Table 6 presents a five-quarter comparison of the components of nonperforming assets. At September 30, 2003, nonperforming assets as a percentage of loans net of unearned income, foreclosed properties and repossessions decreased 17 basis points to 0.55 percent compared to 0.72 percent at September 30, 2002,

Table of Contents

reflecting a \$26.9 million decrease in nonperforming assets. Compared to year-end 2002, nonperforming assets declined \$35.2 million primarily as a result of a \$38.0 million decline in nonaccrual loans partially offset by a \$1.5 million increase in repossessions and a \$1.3 million increase in foreclosed properties. The decrease in nonaccrual loans was primarily the result of a \$39.2 million decrease from December 31, 2002, in nonaccrual commercial and commercial real estate loans slightly offset by a \$1.6 million increase in nonaccrual equity loans and lines. The decrease in nonaccrual commercial loans reflects a downward trend in commercial problem loans. The increase in nonaccruing equity loans and lines is reflective of the impact of the current economic downturn on consumers and the increase in the size of the portfolio. This increase is also consistent with the national trend of higher bankruptcy and foreclosure actions. AmSouth did not have any nonperforming assets considered restructured loans at September 30, 2003 and 2002. The increase in foreclosed properties was the result of foreclosures in residential first mortgages and home equity loans, which usually occur late in an economic downturn when unemployment is still rising.

Included in nonperforming assets at September 30, 2003 and 2002, was \$60.0 million and \$93.9 million, respectively, of loans that were considered to be impaired, substantially all of which were on a nonaccrual basis. At September 30, 2003 and 2002, there was \$14.0 million and \$23.1 million, respectively, in the allowance for loan losses specifically allocated to \$41.3 million and \$77.8 million, respectively, of impaired loans. No specific reserves were required for \$18.7 million and \$16.1 million of impaired loans at September 30, 2003 and 2002, respectively. The average recorded investment in impaired loans for the three months ended September 30, 2003 and 2002, was \$63.9 million and \$96.5 million, respectively, and \$80.3 million and \$101.8 million, respectively, for the nine months ended September 30, 2003 and 2002. AmSouth recorded no material interest income on its impaired loans during the three and nine months ended September 30, 2003. At September 30, 2003 and 2002, AmSouth had approximately \$34.5 million and \$65.1 million, respectively, of potential problem commercial loans which were not included in the nonaccrual loans or in the 90 days past due categories at quarter-end but for which management had concerns as to the ability of such borrowers to comply with their present loan repayment terms.

Noninterest Revenues and Noninterest Expenses

Noninterest revenues (NIR) were \$228.8 million during the third quarter of 2003 and \$632.4 million for the first nine months of 2003. The quarterly and nine-month totals represent a 21.5 percent and 15.6 percent increase from the corresponding periods in 2002. The increase in NIR compared to 2002 was primarily due to increases in service charges on deposit accounts, interchange income, mortgage income, portfolio income, bankcard income and other noninterest revenues. The growth of service charge revenues for the three months and nine months ended September 30, 2003 of \$9.9 million and \$34.4 million or 12.7 percent and 16.4 percent compared to the corresponding periods in 2002 was primarily the result of increases in overdraft fees. The increase in overdraft fees was primarily the result of an increase in the volume of overdrafts, and an increase in the NSF fees charged per transaction. In addition, the increase also reflected charges for overdraft fees created by ATM withdrawals, which were not being charged during the first nine months of 2002. These new procedures are related to an ongoing initiative to manage, in a consistent manner, customers' intra-day account balances. Enhancing this management should also enable AmSouth to better manage its risks, including fraud risks, arising from various transactions that can affect a customer's intra-day account balances. On a year-to-date comparison, the increase also reflected the implementation of payment posting procedures made during the second quarter of 2002, which standardized the posting of NSF fees for paper-based and electronic payments. Prior to this change in procedure, paper-based payments were prioritized ahead of electronic payments in posting transactions to accounts, which resulted in fewer overdrafts. The subsequent change in procedures provides consistent treatment for all customer initiated transactions and helps to ensure that larger, more important transactions are given priority in payment, whether electronic or paper-based. The increase in mortgage income of \$4.9 million and \$21.7 million for the three months and nine months ended September 30, 2003 reflected the impact of higher residential mortgage originations. The higher level of originations resulted in higher gains on the sale of mortgage loans. As discussed previously, the increase in mortgage originations was impacted by AmSouth's ongoing mortgage initiative and the low interest rate environment during the first nine months of 2003. If interest rates continue to rise, it is likely to negatively impact the level of mortgage originations as well as the level of mortgage income. Partially

Table of Contents

offsetting the increase from gains on the sale of mortgage loans were decreases of \$1.8 million and \$6.1 million for the three months and nine months ended September 30, 2003, respectively, compared to the same periods in 2002, in servicing and other fee income related to loans previously sold to third-party conduits. These decreases reflect the continued paydown of loans previously sold into these conduits. Also impacting the comparison between the third quarter of 2003 versus the third quarter of 2002, was a \$3.1 million decrease as a result of charges taken to record changes in the fair market value of mortgage derivative instruments. During the third quarter of 2003, AmSouth recorded a \$2.4 million charge to NIR versus \$670 thousand of income in the third quarter of 2002 associated with the changes in the fair value of mortgage derivative instruments. AmSouth utilizes forward contracts to economically hedge future sales of mortgage loans into the secondary market. While these forward contracts are used to hedge AmSouth's exposure to changes in market rates on mortgage loan and mortgage loan commitments which AmSouth has identified to be sold, they do not meet the strict accounting requirements necessary to receive hedge accounting treatment. Accordingly, AmSouth is required to record changes in the fair value of these forward contract instruments into earnings while any offsetting increase in the value of mortgage loans these contracts are hedging is not permitted to be recorded as earnings. In addition to forward contracts, loan commitments associated with mortgages AmSouth plans to sell are also considered derivative instruments and are marked to market through earnings and tend to offset the changes in the value of the forward contracts. Any losses or gains associated with marking these derivative contracts to market are eventually offset by gains or losses recorded in the following quarter when the mortgage loan sales being economically hedged are completed. On a year-to-date basis, the impact of marking to market mortgage derivative instruments was a \$208 thousand increase in revenue in 2003 versus 2002.

The increase in interchange income for the third quarter and first nine months of 2003 compared to the same periods in 2002 was primarily due to increases in the volume of checkcards outstanding and in transaction volumes. This growth was directly related to higher sales of convenience services through AmSouth's strategic initiative to aggressively grow consumer banking business. The level of interchange income in the third quarter of 2003 was negatively impacted by the recent VISA/Wal-mart settlement which resulted in a decrease in interchange income during the third quarter of 2003 versus the second quarter of 2003. While the impact of the VISA settlement is contingent upon the volume of interchange transactions, AmSouth's most recent estimate is that the decline in interchange income will reduce AmSouth's earnings per share by approximately one half cent a share for the fourth quarter of 2003 compared to 2002. The increase in portfolio income reflected larger gains on the sale of securities during the period. The increase in bankcard income for both the three month and nine month periods of 2003 reflected a higher level of bank card activity. The increase in other noninterest revenues in the third quarter of 2003 versus the third quarter of 2002 reflects the impact of a \$6.6 million gain on the sale of real property, a \$2.4 million increase in income related to market adjustments on derivative instruments and \$3.0 million in income related to the demutualization of one of AmSouth's insurance providers recorded in the third quarter of 2003. The increase between years also reflects a \$1.7 million loss recorded in the third quarter of 2002 on a commercial lease transaction related to a drop in residual value. On a year-to-date basis, derivative income increased \$3.2 million in 2003 compared to the same period in 2002. The level of other NIR for the first nine months of 2003 was also impacted by a \$4.2 million second quarter charge related to the write-off of lease residual values associated with two customers. Other items that impacted other NIR on a year-to-date basis in 2002 included \$2.0 million of losses associated with the sale of branch facilities and other assets recorded in the second quarter of 2002 and a \$2.2 million fixed asset loss recorded in the first quarter of 2002.

These increases in NIR in 2003 versus 2002 were offset by decreases in consumer investment services income, income from bank owned life insurance (BOLI) and on a year-to-date basis trust income. The decrease in consumer investment services income for the three-month and nine-month periods ended September 30, 2003 versus the same periods in 2002 was impacted by the soft economy and the low interest rate environment. A decline in branch platform sales of fixed annuity products was the primary reason for the decline between years. The decrease in BOLI income was primarily the result of lower benefit payments being received during the three months and nine months ended September 30, 2003 versus the same periods in 2002. The decrease in trust income on a year-to-date basis was primarily due to adverse equity market conditions that existed during the first half of the year. While the increase in trust income in the third quarter of 2003 reflected the favorable impact of market value increases associated with the improving equity market conditions in the third quarter of 2003.

Table of Contents

Noninterest expenses (NIE) for the third quarter of 2003 increased \$30.5 million or 11.1 percent compared to the same period in 2002 and increased \$44.8 million or 5.3 percent for the first nine months of 2003 compared to the corresponding period in 2002. The increase in NIE was primarily related to increases in salaries and employee benefits, net occupancy expense and other NIE, partially offset by lower equipment expenses. The increase in salaries and employee benefits reflects higher base salaries due to merit increases and an increase in the number of personnel primarily associated with revenue growth initiatives. The increase over 2002 levels also reflects changes in pension assumptions made at the end of 2002 which impact the pension expense calculation for 2003. Plan assumptions were lowered for the discount rate, the rate of compensation increase and the rate of return on pension plan assets. The increase in net occupancy expense was due mainly to an increase in depreciation associated with the new operations center and the cost of new branches as well as higher maintenance expense and higher rental expense. The increase in other NIE versus the same periods of 2002 reflected higher expenses associated with other personnel related expenses including training and relocation expenses, travel and convention expenses, and a higher level of non-credit losses. The comparison of other NIE versus the same periods in 2002 was also impacted by a \$3.1 million recovery associated with the sale of a credit derivative contract recorded in the third quarter of 2002. AmSouth recorded a \$3.7 million charge in the second quarter of 2002 associated with the same credit derivative contract after AmSouth eliminated its credit exposure to the corporate customer for which the credit derivative provided protection. The decrease in equipment expense was primarily a result of a reduction in the estimated ad valorem taxes required to be paid which resulted in a reduction in the ad valorem tax accrual in the third quarter of 2003. The year-to-date decreases also reflected lower depreciation expense as a result of two large equipment projects becoming fully depreciated.

Capital Adequacy

At September 30, 2003, shareholders' equity totaled \$3.2 billion or 7.11 percent of total assets while average equity as a percentage of average assets for the three month and nine month periods ended September 30, 2003 was 7.14% and 7.38%, respectively. Since December 31, 2002, shareholders' equity increased \$36.8 million primarily as a result of net income for the first nine months of 2003 of \$467.6 million. The increase in shareholders' equity from net income was partially offset by the declaration of dividends of \$243.2 million and the purchase of 7.95 million shares of AmSouth common stock for \$162.8 million during the first nine months of 2003. In addition, shareholders' equity was also reduced by \$87.3 million associated with lower valuation of the AFS portfolio, a \$3.3 million reduction associated with minimum pension liability related to an unfunded pension liability and a \$26.3 million decrease due to changes in other comprehensive income associated with cash flow hedges.

Table 9 presents the capital amounts and risk-adjusted capital ratios for AmSouth and AmSouth Bank at September 30, 2003 and 2002. At September 30, 2003, AmSouth exceeded the regulatory minimum required risk-adjusted Tier 1 Capital Ratio of 4.00% and risk-adjusted Total Capital Ratio of 8.00%. In addition, the risk-adjusted capital ratios for AmSouth Bank were above the regulatory minimums, and the Bank was well capitalized at September 30, 2003.

Earnings Outlook

Though today's business environment is marked with uncertainty, AmSouth expects diluted earnings per share to be in line with the consensus earnings estimate of 45 cents per share for the fourth quarter of 2003. This earnings outlook is based on a number of expectations including: an increase in net interest income in the fourth quarter reflecting stabilization in the net interest margin due to improving market rates; improved balance sheet growth from sustained loan demand and core funding growth; and declining prepayment activity and related premium amortization in the investment portfolio. Noninterest revenues should continue to grow at a modest rate during the fourth quarter with expected increases in service charge, trust and investment services income. In addition, AmSouth expects to continue to take securities gains during the fourth quarter of 2003 but the level of gains is not expected to match third quarter levels. AmSouth also anticipates a continued increase in NIE during the fourth quarter of 2003. Failure of any of these expectations to be met could affect the realization of the estimated fourth quarter earnings per share. See the discussion of Forward-Looking Statements on page 2, which details a number of additional factors that could cause results to differ from management's current expectations.

	\$ 6,428,817		\$ 4,448,355	

NOTES:

- The weighted average remaining life, which reflects the amortization on mortgage related and other asset-backed securities, and the weighted average yield on the combined held-to-maturity and available-for-sale portfolios at September 30, 2003, were approximately 4.1 years and 4.61%, respectively. Included in the combined portfolios was \$10.0 billion of mortgage-backed securities. The weighted-average

Edgar Filing: AMSOUTH BANCORPORATION - Form 10-Q

remaining life and the weighted-average yield of mortgage-backed securities at September 30, 2003, were approximately 3.9 years and 4.56%, respectively. The duration of the combined portfolios, which considers the repricing frequency of variable rate securities, is approximately 3.4 years.

2. The available-for-sale portfolio included net unrealized gains of \$32.2 million and \$197.1 million at September 30, 2003 and 2002, respectively.

Notes:

1. All maturities are based on contractual maturities. Excludes \$51.7 million of FAS 133 valuation adjustments.
2. Excludes \$523 thousand of FAS 133 valuation adjustments.
3. Excludes \$3.1 billion of loan commitments under equity lines and \$2.0 billion under revolving lines of credit which do not have scheduled expiration dates.

Table of Contents

Item 3. Quantitative and Qualitative Disclosures About Market Risk

The information required by this item is included on pages 18 and 19 of Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations.

Item 4. Controls and Procedures

An evaluation was performed as of September 30, 2003 under the supervision and with the participation of AmSouth's management, including the Chief Executive Officer (CEO) and Chief Financial Officer (CFO), of the effectiveness of the design and operation of AmSouth's disclosure controls and procedures. Based on that evaluation, AmSouth's management, including the CEO and CFO, concluded that AmSouth's disclosure controls and procedures were effective as of September 30, 2003. There have been no significant changes in AmSouth's internal controls or in other factors that could significantly affect internal controls subsequent to September 30, 2003.

PART II.

OTHER INFORMATION

Item 1. Legal Proceedings

In the ordinary course of business, AmSouth and its subsidiaries are from time to time named as defendants in or parties to pending and threatened legal actions and proceedings. Among the actions which are pending against AmSouth are actions brought on behalf of various classes of claimants. These actions and claims, including class actions, are similar to others that have been brought in recent years against financial institutions and relate to AmSouth's lending, collections, loan servicing, depository, investment, trust and other activities. These actions and claims allege violations of consumer protection, securities, banking and other laws, both state and federal. Some of these claims and actions seek substantial compensatory and punitive damage awards and injunctive relief. Additionally, AmSouth, and certain of its subsidiaries which are regulated by one or more federal and state regulatory authorities, are the subject of regularly conducted examinations, reviews and investigations conducted by such regulatory authorities. AmSouth may occasionally have disagreements with regulatory authorities resulting from these investigations, examinations and reviews.

It may take a number of years to fully and finally resolve the legal proceedings, including actions, claims and disagreements with regulators, currently pending due to their complexity and for other reasons. Further, in view of the inherent difficulty of predicting the outcome of such proceedings, AmSouth cannot state what the eventual outcome of these proceedings will be. Nonetheless, based on current knowledge and the advice of legal counsel, AmSouth's management is of the opinion that the ultimate resolution of these legal proceedings will not have a material adverse effect on the consolidated financial condition, operations or liquidity of AmSouth.

Item 6. Exhibits and Reports on Form 8-K

Item 6(a) Exhibits

The exhibits listed in the Exhibit Index at page 34 of this Form 10-Q are filed herewith or are incorporated by reference herein.

Item 6(b) Reports on Form 8-K

One report on Form 8-K was furnished by AmSouth during the period July 1, 2003 to September 30, 2003:

A report was furnished on July 15, 2003 to furnish copies of the press release and supplemental financial information regarding preliminary results of operations for the quarter ended June 30, 2003.
