SECURITIES AND EXCHANGE COMMISSION

Washington, D.C. 20549

FORM 10-Q

QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15 (d) OF THE SECURITIES

EXCHANGE ACT OF 1934

FOR THE QUARTERLY PERIOD ENDED SEPTEMBER 30, 2007

Commission file number: 000-33063

SIERRA BANCORP

(Exact name of Registrant as specified in its charter)

California
(State of Incorporation)

33-0937517
(IRS Employer Identification No)

86 North Main Street, Porterville, California 93257

(Address of principal executive offices) (Zip Code)

(559) 782-4900

(Registrant's telephone number, including area code)

Not Applicable

(Former name, former address and former fiscal year, if changed since last report)

Indicate by check mark whether the Registrant (1) has filed all reports required to be filed by Section 13 or 15 (d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the Registrant was required to file such reports) and (2) has been subject to such filing requirements for the past 90 days. YES NO

Edgar Filing: SIERRA BANCORP - Form 10-Q

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer.

Large accelerated filer Accelerated filer Non-accelerated filer

Indicate by check mark whether the Registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). YES NO

Indicate the number of shares outstanding of each of the issuer's classes of common stock, as of the latest practicable date.

Common stock, no par value, 9,716,841 shares outstanding as of October 31, 2007

SIERRA BANCORP

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

September 30, 2007

Note 1 The Business of Sierra Bancorp

Sierra Bancorp (the Company), headquartered in Porterville, California, is a California corporation registered as a bank holding company under the Bank Holding Company Act of 1956, as amended. The Company was incorporated in November 2000 and acquired all of the outstanding shares of Bank of the Sierra (the Bank) in August 2001. The Company's principal subsidiary is the Bank, and the Company exists primarily for the purpose of holding the stock of the Bank and of such other subsidiaries it may acquire or establish. The Company's main source of income is dividends from the Bank, but the Company intends to explore supplemental sources of income in the future. The expenditures of the Company, including (but not limited to) the payment of dividends to shareholders, if and when declared by the Board of Directors, the cost of servicing debt, audit costs, and shareholder expenses will generally be paid from dividends remitted to the Company by the Bank.

At the present time, the Company's only other direct subsidiaries are Sierra Statutory Trust II and Sierra Capital Trust III, which were formed in March 2004 and June 2006, respectively, solely to facilitate the issuance of capital trust pass-through securities. Pursuant to FASB Interpretation No. 46, Consolidation of Variable Interest Entities (FIN 46), these trusts are not reflected on a consolidated basis in the financial statements of the Company. References herein to the Company include Sierra Bancorp and its consolidated subsidiary, the Bank, unless the context indicates otherwise.

The Bank is a California state-chartered bank headquartered in Porterville, California. It was incorporated in September 1977, opened for business in January 1978, and has grown to be the largest independent bank headquartered in the South San Joaquin Valley. The Bank is an independent multi-community bank that offers a full range of retail and commercial banking services primarily in the central and southern sections of the San Joaquin Valley. On the southern end, our footprint extends east through the Tehachapi plateau and into the northwestern tip of the Mojave Desert. We currently operate 21 full service branch offices throughout this geographic footprint. The Bank's two newest branches opened in Delano in March 2007 and Bakersfield in February 2006. Our next branch is expected to be another branch in the city of Bakersfield, which should open in the second quarter of 2008. In addition to these full-service branches, the Bank has an agricultural credit unit and an SBA lending unit with staff located at our corporate headquarters, eight offsite ATMs, and a virtual branch through which customers can open deposit accounts and submit certain loan applications online. The Bank's deposit accounts are insured by the Federal Deposit Insurance Corporation (FDIC) up to maximum insurable amounts.

Note 2 Basis of Presentation

The accompanying unaudited consolidated financial statements have been prepared in a condensed format, and therefore do not include all of the information and footnotes required by generally accepted accounting principles for complete financial statements. The information furnished in these interim statements reflects all adjustments that are, in the opinion of management, necessary for a fair statement of the results for such period. Such adjustments are of a normal recurring nature, unless otherwise disclosed in this Form 10-Q. The results of operations in the interim statements are not necessarily indicative of the results that may be expected for any other quarter, or for the full year. Certain amounts reported for 2006 have been reclassified to be consistent with the reporting for 2007. The interim financial information should be read in conjunction with the Company's Annual Report on Form 10-K for the year ended December 31, 2006 as filed with the Securities and Exchange Commission.

Note 3 Current Accounting Developments

In July 2006, the Financial Accounting Standards Board (FASB) issued FASB Interpretation No. 48, Accounting for Uncertainty in Income Taxes—an interpretation of FASB Statement No. 109 (FIN 48) which clarifies the accounting and disclosure for uncertainty in tax positions as defined. FIN 48 seeks to reduce the diversity in certain recognition and measurement practices related to accounting for income taxes. We adopted FIN 48 effective January 1, 2007, and have determined that as of September 30, 2007 any uncertain tax positions that might exist are immaterial.

Table of Contents

In February 2006, the FASB issued Statement of Accounting Standards (SFAS) No. 155, Accounting for Certain Hybrid Financial Instruments an amendment of FASB Statements No. 133 and 140 (FAS 155). FAS 155 simplifies accounting for certain hybrid instruments currently governed by SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities, by allowing fair value re-measurement of hybrid instruments that contain an embedded derivative that otherwise would require bifurcation. FAS 155 also eliminates the guidance in SFAS No. 133 Implementation Issue No. D1, Application of Statement 133 to Beneficial Interests in Securitized Financial Assets, which provides that such beneficial interests are not subject to SFAS No. 133. FAS 155 amends SFAS No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities a Replacement of FASB Statement No. 125, by eliminating the restriction on passive derivative instruments that a qualifying special-purpose entity may hold. We adopted this statement effective January 1, 2007. It has not had, nor is it expected to have, a material impact on the Company's financial condition, results of operations or cash flows.

In March 2006, the FASB issued SFAS No. 156, Accounting for Servicing of Financial Assets an amendment of FASB Statement No. 140 (FAS 156). FAS 156 requires an entity to recognize a servicing asset or servicing liability when it undertakes an obligation to service a financial asset in specific situations. The servicing asset or servicing liability shall be initially measured at fair value; however, an entity may elect the amortization method or fair value method for subsequent balance sheet reporting periods. We adopted this statement effective January 1, 2007. It has not had, nor is it expected to have, a material impact on the Company's financial condition, results of operations or cash flows.

In September 2006, the Emerging Issues Task Force (EITF) reached a final consensus on the subject titled Accounting for Deferred Compensation and Postretirement Benefit Aspects of Endorsement Split-Dollar Arrangements. The EITF has concluded that the recognition of a liability is required for the postretirement benefits provided through an endorsement split-dollar life insurance arrangement. Pursuant to the final consensus, if an employer has promised to pay a death benefit directly from the company to a participant (or designated beneficiary), then a liability for the present value of the death benefit must be accrued over the participant's required service period. However, if the employer has agreed to maintain a split-dollar arrangement and share some portion of the death benefits of the underlying insurance policy, then the postretirement cost of insurance, rather than the death benefit, should be accrued. Since most of the Company's agreements involving postretirement death benefits are split-dollar arrangements associated with an underlying insurance policy, we anticipate that our accrual requirement will, for the most part, be limited to the postretirement cost of insurance. The new guidance will be effective for fiscal years beginning after December 15, 2007. Transition to the new guidance requires a cumulative-effect adjustment to retained earnings at the beginning of the year of implementation, to reflect the change in accounting principle. We have engaged a consultant to review our split-dollar life insurance agreements and provide accounting assistance, and initial estimates are that this EITF guidance could result in a one-time charge to capital of about \$1.1 million upon implementation on January 1, 2008, and a quarterly charge to expense of about \$30,000 thereafter.

In September 2006, the FASB issued SFAS No. 157, Fair Value Measurements (FAS 157). FAS 157 enhances existing guidance for measuring assets and liabilities using fair value. Prior to the issuance of FAS 157, guidance for applying fair value was incorporated in several accounting pronouncements. FAS 157 provides a single definition of fair value, together with a framework for measuring it, and requires additional disclosure about the use of fair value to measure assets and liabilities. FAS 157 also emphasizes that fair value is a market-based measurement, not an entity-specific measurement, and sets out a fair value hierarchy with the highest priority being quoted prices in active markets. Under FAS 157, fair value measurements are disclosed by level within that hierarchy. While FAS 157 does not add any new fair value measurements, it does change current practice. Changes to practice include: (1) a requirement for an entity to include its own credit standing in the measurement of its liabilities; (2) a modification of the transaction price presumption; (3) a prohibition on the use of block discounts when valuing large blocks of securities for broker-dealers and investment companies; and (4) a requirement to adjust the value of restricted stock for the effect of the restriction even if the restriction lapses within one year. FAS 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years.

Table of Contents

In February 2007, the FASB issued SFAS No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities Including an amendment of FASB Statement No. 115 (FAS 159)*. FAS 159 permits the measurement of many financial instruments and certain other balance sheet items at fair value, in order to mitigate volatility in reported earnings caused by measuring related assets and liabilities differently without having to apply complex hedge accounting provisions. Upon adoption, balance sheet items designated for fair value accounting are marked to market through equity, and the fair value option may also be selectively applied to items acquired after the adoption date. Unrealized gains and losses on all items so designated are reported in earnings at each subsequent reporting date. The fair value option may be applied instrument by instrument (with a few exceptions), and is applied only to entire instruments and not to portions thereof. FAS 159 is effective for financial statements issued for fiscal years beginning after November 15, 2007. Other than our investments which are currently classified as available-for-sale and are thus reported at fair value in accordance with FAS 115, we do not anticipate that fair value accounting will be applied to any balance sheet item upon adoption of FAS 159 and FAS 157 on January 1, 2008, in which case there would be no impact on our financial condition, results of operations or cash flows.

Note 4 Supplemental Disclosure of Cash Flow Information

During the nine months ended September 30, 2007 and 2006, cash paid for interest due on interest-bearing liabilities was \$24.1 million and \$16.2 million, respectively. There was \$6.1 million in cash paid for income taxes during the nine months ended September 30, 2007, and \$5.5 million paid for income taxes during the nine months ended September 30, 2006. There were two mobile homes acquired in the settlement of \$76,000 in loans for the nine months ended September 30, 2007, and no real estate or related assets acquired for the nine months ended September 30, 2006. There were no loans made to finance the sale of other real estate during either of those periods.

Note 5 Share Based Compensation

On March 15, 2007, the Company's Board of Directors approved a new equity compensation plan, the 2007 Stock Incentive Plan (the *2007 Plan*), which was approved by the Company's shareholders on May 23, 2007. Our 1998 Stock Option Plan (the *1998 Plan*) was concurrently terminated, although 700,061 options granted prior to the termination of the 1998 Plan were still outstanding as of September 30, 2007 and were not affected by the termination. The 2007 Plan provides for the issuance of both incentive and nonqualified stock options to officers and employees, and of nonqualified stock options to non-employee directors, of the Company. The 2007 Plan also provides for the issuance of restricted stock awards to these same classes of eligible participants, which awards may be granted on such terms and conditions as are established at the discretion of the Board of Directors or the Compensation Committee. The total number of shares of the Company's authorized but unissued stock reserved and available for issuance pursuant to Awards under the 2007 Plan is 1,500,000 shares.

There were no stock options granted by the Company in the third quarter of 2007, although 15,000 shares were granted under the 1998 Plan in the third quarter of 2006. The options granted during the third quarter of 2006 had a calculated fair value of \$7.07 per share using the following assumptions: Expected dividend yield of 1.8%; volatility of 25.7%; average risk-free interest rate of 4.82%; and expected weighted average option term of 4.8 years.

Pursuant to FASB Statement 123(R), share-based employee compensation expense is reflected in our income statement for each option granted, over the vesting period of such option. The Company is utilizing the Black-Scholes model to value stock options, and the multiple option approach is used to allocate the resulting valuation to actual expense. Under the multiple option approach, an employee's options for each vesting period are separately valued and amortized. This appears to be the FASB-preferred method for option grants with multiple vesting periods, which is the case for most options granted by the Company. A charge of \$57,000 was reflected in the Company's income statement during the third quarter of 2007 and \$75,000 was reflected during the third quarter of 2006, as pre-tax compensation expense related to outstanding and unvested stock options. For the first nine months, these charges amounted to \$246,000 in 2007 and \$262,000 in 2006.

Table of Contents**Note 6 Earnings Per Share**

Earnings per share for all periods presented in the Consolidated Statements of Income are computed based on the weighted average number of shares outstanding during each period. There were 9,672,247 weighted average shares outstanding during the third quarter of 2007, and 9,773,097 during the third quarter of 2006. There were 9,713,097 weighted average shares outstanding during the first nine months of 2007, and 9,763,707 during the first nine months of 2006.

Diluted earnings per share include the effect of the potential issuance of common shares, which for the Company is limited to shares that would be issued on the exercise of outstanding stock options. The dilutive effect of all options outstanding was calculated using the treasury stock method, excluding anti-dilutive transactions and adjusting for unamortized expense and windfall tax benefits. For the third quarter and first nine months of 2007, the dilutive effect of options outstanding calculated under the treasury stock method totaled 336,216 and 363,021, respectively, which were added to basic weighted average shares outstanding for purposes of calculating diluted earnings per share. Likewise, for the third quarter and first nine months of 2006, shares totaling 515,720 and 512,874, respectively, were added to basic weighted average shares outstanding to calculate diluted earnings per share.

Note 7 Comprehensive Income

Comprehensive income includes net income and other comprehensive income. The Company's only source of other comprehensive income is derived from unrealized gains and losses on investment securities available-for-sale. Reclassification adjustments, resulting from gains or losses on investment securities that were realized and included in net income of the current period that also had been included in other comprehensive income as unrealized holding gains or losses in the period in which they arose, are excluded from comprehensive income of the current period. The Company's comprehensive income was as follows (dollars in thousands):

	For the Three-month Period		For the Nine-month Period	
	Ended September 30, 2007	2006	Ended September 30, 2007	2006
Net income	\$ 5,270	\$ 4,902	\$ 16,078	\$ 14,451
Other comprehensive income/(loss):				
Unrealized holding gain/(loss)	2,782	2,363	378	(759)
Less: reclassification adjustment	2	9	14	9
Pre-tax other comprehensive inc/(loss)	2,780	2,354	364	(768)
Less: tax impact of above	1,169	990	153	(351)
Net other comprehensive income/(loss)	1,611	1,364	211	(417)
Comprehensive income	\$ 6,881	\$ 6,266	\$ 16,289	\$ 14,034

Note 8 Financial Instruments with Off-Balance-Sheet Risk

The Company is a party to financial instruments with off-balance-sheet risk in the normal course of business, which is necessary for us to meet the financing needs of our customers. These financial instruments consist of commitments to extend credit and to issue standby letters of credit. The Company uses the same credit policies in making commitments that it does for making loans included on the balance sheet. Commitments generally have fixed expiration dates or other termination clauses, and may require payment of a fee. Since many of the commitments are expected to expire without being drawn upon, total commitment amounts do not necessarily represent future cash requirements.

Table of Contents

The Company's exposure to credit loss for commitments to extend credit and issue letters of credit is represented by the contractual amount of those instruments, and a \$160,000 reserve for potential losses on unfunded commitments is reflected as a liability on the Company's balance sheet at September 30, 2007. The following financial instruments represent off-balance-sheet credit risk (dollars in thousands):

	September 30, 2007	December 31, 2006
Commitments to extend credit	\$ 223,626	\$ 261,316
Standby letters of credit	\$ 9,398	\$ 17,139
Commercial letters of credit	\$ 10,789	\$ 11,393
Credit card commitments	\$	\$ 39,602

Commitments to extend credit consist primarily of unfunded single-family residential construction loans, home equity lines of credit, commercial real estate construction loans and commercial revolving lines of credit. Construction loans are established under standard underwriting guidelines and policies and are secured by deeds of trust, with disbursements made over the course of construction. Commercial revolving lines of credit have a high degree of industry diversification.

Standby letters of credit are generally unsecured and are issued by the Company to guarantee the performance of a customer to a third party, while commercial letters of credit represent the Company's commitment to pay a third party on behalf of a customer upon fulfillment of contractual requirements. The credit risk involved in issuing letters of credit is essentially the same as the risk in extending unsecured loans to customers.

Note 9 Recent Developments

On March 15, 2007, the Board of Directors of Bank of the Sierra approved the sale of the Bank's credit card portfolio, consisting of \$8.2 million in consumer card balances and \$2.6 million in commercial loan balances. This decision was reached because of the financial benefits of a sale, as well as the expanded credit card options and superior service that the purchaser can provide to our customers. The sale of our Credit Card Portfolio to Elan Financial Services, a wholly owned subsidiary of U.S. Bancorp, took place effective June 1, 2007. It generated a premium on balances sold of about \$1.2 million and enabled us to release the approximate \$400,000 liability we had accrued for the redemption of credit card scorecard points, for a total pre-tax gain of \$1.6 million. The sale also freed up the \$500,000 loan loss allowance allocated to credit card balances. In projecting the impact of the sale on operating income going forward, it should be noted that we will continue to participate in a share of the interchange and interest revenue generated by credit cards issued in our name. Furthermore, we have eliminated most of the costs associated with our credit cards, including funding costs, personnel costs, servicing costs, net loan losses, and the scorecard liability accrual. With the exception of the gain on sale and conversion-related costs, the sale-related impact on pre-tax operating income has thus far been immaterial.

The Company recently entered into new contracts for debit and ATM networks, as well as for processing debit and ATM transactions. Based on growth expectations for debit and ATM transactions and relative to the terms of the previous contracts, the new contracts are expected to enhance the Company's pre-tax income by approximately \$2.9 million over five years upon conversion in mid-November 2007, although that amount could ultimately be significantly different than projected. For the 12 month period commencing in mid-November 2007, the total pre-tax income enhancement is expected to be close to \$450,000, of which approximately \$300,000 should be from reduced non-interest expense and the remainder should be in the form of higher non-interest revenue. The new contracts will allow us to enhance customer service by implementing new programs and technologies such as debit rewards, contactless debit cards, and improved fraud detection capabilities.

On October 18, 2007, the Board of Directors of the Company approved a \$0.16 per share dividend. The dividend is payable on November 15, 2007 to shareholders of record as of November 1, 2007. The total dividend will be approximately \$1.56 million and represents about 30% of third quarter consolidated net income, which is close to the average payout ratio for all publicly-traded financial institutions during 2006. The recommended dividend meets all applicable legal and regulatory requirements for the Company.

PART I FINANCIAL INFORMATION

ITEM 2

**MANAGEMENT'S DISCUSSION AND
ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS**

FORWARD-LOOKING STATEMENTS

This Form 10-Q includes forward-looking statements that involve inherent risks and uncertainties. Words such as *expects*, *anticipates*, *believes*, *projects*, and *estimates* or variations of such words and similar expressions are intended to identify such forward-looking statements. These statements are not guarantees of future performance and involve certain risks, uncertainties and assumptions that are difficult to predict. Therefore, actual outcomes and results may differ materially from what is expressed, forecast in, or implied by such forward-looking statements.

A variety of factors could have a material adverse impact on the Company's financial condition or results of operations, and should be considered when evaluating the potential future financial performance of the Company. These include but are not limited to the possibility of deterioration in economic conditions in the Company's service areas; risks associated with fluctuations in interest rates; liquidity risks; increases in nonperforming assets and net credit losses that could occur, particularly in times of weak economic conditions or rising interest rates; the loss in market value of available-for-sale securities that could result if interest rates change substantially or an issuer has real or perceived financial difficulties; and risks associated with the multitude of current and future laws and regulations to which the Company is and will be subject.

CRITICAL ACCOUNTING POLICIES

The Company's financial statements are prepared in accordance with accounting principles generally accepted in the United States. The financial information and disclosures contained within those statements are significantly impacted by Management's estimates and judgments, which are based on historical experience and various other assumptions that are believed to be reasonable under current circumstances. Actual results may differ from those estimates under divergent conditions.

Critical accounting policies are those that involve the most complex and subjective decisions and assessments, and have the greatest potential impact on the Company's stated results of operations. In Management's opinion, the Company's critical accounting policies deal with the following areas: the establishment of the Company's allowance for loan and lease losses, as explained in detail in the *Provision for Loan and Lease Losses* and *Allowance for Loan and Lease Losses* sections of this discussion and analysis; deferred loan origination costs, which are estimated based on an annual evaluation of expenses (primarily salaries) associated with successful loan originations and are allocated to individual loans as they are booked, but can actually vary significantly for individual loans depending on the characteristics of such loans; income taxes, especially with regard to the ability of the Company to recover deferred tax assets, as discussed in the *Provision for Income Taxes* and *Other Assets* sections of this discussion and analysis; goodwill, which is evaluated annually based on changes in the market capitalization of the Company and for which management has determined that no impairment exists, as discussed further in *Other Assets*; and equity-based compensation, which is discussed in greater detail in Note 5 to the consolidated financial statements. Critical accounting areas are evaluated on an ongoing basis to ensure that the Company's financial statements incorporate the most recent expectations with regard to these areas.

Table of Contents

OVERVIEW OF THE RESULTS OF OPERATIONS

AND FINANCIAL CONDITION

RESULTS OF OPERATIONS SUMMARY

Third quarter 2007 Compared to Third quarter 2006

Net income for the quarter ended September 30, 2007 was \$5.3 million compared to \$4.9 million for the quarter ended September 30, 2006, an improvement of 8%. Basic and diluted earnings per share for the third quarter of 2007 were \$0.54 and \$0.53, respectively, compared to \$0.50 and \$0.48 for the third quarter of 2006. The Company's annualized return on average equity was 22.16% and annualized return on average assets was 1.73% for the quarter ended September 30, 2007, compared to a return on equity of 22.73% and return on assets of 1.68% for the quarter ended September 30, 2006. The primary drivers behind the variance in net income are as follows:

Net interest income increased by \$114,000, or 1%. The percentage increase in net interest income was substantially lower than the 5% increase in average earning assets due to compression in our net interest margin, which was 21 basis points lower in the third quarter of 2007 than in the third quarter of 2006 primarily because of the relatively higher cost and higher proportion of interest-bearing liabilities.

The provision for loan losses was \$351,000 lower in the third quarter of 2007 than in the third quarter of 2006, due to the comparative lack of loan growth and a higher level of recoveries on previously charged-off loans in the third quarter of 2007.

Despite a slightly lower level of average transaction account balances, service charges on deposit accounts increased by \$607,000, or 41%. This substantial increase in fees was due to a higher number of deposit accounts, which contributed to additional overdraft activity, and an upward adjustment in our fee structure.

Other non-interest revenue declined slightly, because higher income from bank-owned life insurance (BOLI) was more than offset by higher costs on an increased investment in tax credit funds and lower non-interest fees related to credit cards.

The expense recorded for salaries and benefits declined by \$38,000, or 1%. Although there were additional salaries and benefits related to our new Delano branch along with regular annual salary adjustments, they were more than offset by an increase in salaries expense deferred for future recognition pursuant to FAS 91. The deferral increased because of a revision in our estimate of the personnel costs involved in each successfully-originated loan, pursuant to an annual review of such costs.

Occupancy expense was virtually unchanged, because normal inflationary increases and occupancy costs associated with the Delano branch were offset by a drop in depreciation expense on certain fixtures and equipment which became fully depreciated during the third quarter of 2007.

Two of the largest contributors to the \$591,000, or 24%, increase in the Other category in Other operating expense were an increase of \$125,000 in marketing expense associated with our current deposit initiatives, and an increase of \$71,000 in credit card costs caused by a one-time conversion-related charge of \$250,000. Other significant increases include postage related to customer compliance mailings and direct-mail marketing, consulting costs stemming from our review of electronic funds transfer contracts, and an increase in our accrual for earnings on directors' deferred compensation balances.

The Company's tax accrual rate dropped slightly to 33.2% in the third quarter of 2007 from 33.9% in the third quarter of 2006, principally because of an additional \$3 million tax-credit investment commitment made in August 2007.

Table of Contents

First Nine months of 2007 Compared to First Nine months of 2006

Net income for the first nine months of 2007 was \$16.1 million, which is \$1.6 million higher than net income for the first nine months of 2006 and represents an 11% increase. Basic and diluted earnings per share were \$1.66 and \$1.60 for the first nine months of 2007, compared to \$1.48 and \$1.41 for the first nine months of the prior year. The Company realized an annualized return on average equity of 23.17% for the first nine months of 2007 and 23.31% for the first nine months of 2006, and achieved a return on assets for the same periods of 1.78% and 1.74%, respectively. The principal reasons for the net income variance for the first nine months include the following:

The Company sold \$11 million in credit card balances in June 2007, resulting in a \$1.6 million pre-tax gain on sale of loans that equates to an increase of approximately \$930,000 in net income. This gain added \$0.10 to diluted earnings per share for the first nine months of 2007, and boosted the Company's annualized return on average equity and return on average assets for the same period by about 125 basis points and 10 basis points, respectively.

Net interest income increased by \$776,000, or 2%. Again, this was proportionately less than the 9% increase in average earning assets because of a 35 basis point drop in our net interest margin for the year-to-date period.

The provision for loan losses was \$848,000 lower in the first nine months of 2007, due to the sale of our credit card loans, slower growth in other loan categories, and a higher level of recoveries in 2007.

Service charges on deposits increased by \$941,000, or 21%, with most of the increase occurring in the third quarter for the reasons noted in the quarterly summary.

In addition to service charges on deposits and gains on the sale of loans, other year-to-date non-interest income increased by \$340,000, or 9%, due mainly to an increase in income from BOLI.

Salaries and benefits increased by \$949,000, or 8%, in part because salaries deferred pursuant to FAS 91 were \$411,000 lower for the year-to-date period. Lower loan origination activity during most of 2007 caused the decline in the FAS 91 deferral amount, although the decline was partially offset by the aforementioned adjustment in per-loan expense deferrals in the third quarter. Costs associated with our Delano branch and regular annual salary increases also contributed to the year-to-date increase in salaries and benefits.

Occupancy expense declined by \$104,000, or 2%, on a year-to-date basis, because increased rent and premises depreciation were more than offset by lower depreciation expense on furniture and equipment and first quarter 2007 property tax refunds resulting from re-assessments.

Other non-interest expenses increased by \$1.1 million, or 14%, due mainly to a \$528,000 increase in marketing expense. The other non-interest expense categories referenced in the quarterly comparison were also factors impacting the year-to-date variance, as was a \$145,000 reduction in foreclosed asset costs stemming from a first quarter 2006 charge to write-down a foreclosed property.

The tax accrual rate for the first nine months of 2007 was slightly higher, because the additional income generated by the credit card loan sale is taxable at our 42% blended marginal rate.

FINANCIAL CONDITION SUMMARY

September 30, 2007 relative to December 31, 2006

Edgar Filing: SIERRA BANCORP - Form 10-Q

The Company's total assets were \$1.208 billion at September 30, 2007, a decline of \$7 million relative to total assets of \$1.215 billion at December 31, 2006. The most significant characteristics of and changes in the Company's balance sheet during the first nine months of 2007 are outlined below:

Total assets declined because loan growth was more than offset by a \$15 million reduction in cash and due from banks, a \$6 million decline in fed funds sold, and a \$6 million drop in investment securities.

Table of Contents

Net growth in gross loan and lease balances was only \$19 million, or 2%. This relatively low growth rate was due to the sale of \$11 million in credit card balances in the second quarter, and net runoff of about \$3 million in the third quarter resulting from weakening loan demand.

Nonperforming assets ended the period at \$1.2 million, or 0.14% of gross loans plus foreclosed assets. This represents an increase from \$689,000 or 0.08% at December 31, 2006, but current non-performing assets are predominantly secured by real estate and are still quite low relative to levels seen in years past. The Company has no subprime exposure in its loan portfolio.

The Company had net loan losses of \$1.7 million in the first nine months of 2007 compared to net losses of \$1.6 million in the first nine months of 2006. Net loan losses in the first nine months of 2007 include \$168,000 attributable to a single commercial loan relationship, along with several unsecured consumer credit lines and equity lines. Also factored in for 2007 is \$828,000 in year-to-date recoveries of previously charged-off loan balances, which exceed recoveries for the same period in the prior year by \$259,000.

Total deposits increased by \$18 million, or 2%. Since wholesale-sourced brokered deposits fell by \$20 million, customer deposits actually grew by \$38 million and would have grown by even more if not for the temporary quarter-end loss of a single \$8 million deposit. Overall, deposits experienced a significant shift out of non-interest demand and savings accounts and into NOW accounts, money market accounts, and time deposits. This shift contributed to our increased funding costs.

Because deposits grew yet total assets declined, we were able to reduce our reliance on other borrowings by \$36 million.

EARNINGS PERFORMANCE

The Company earns income from two primary sources. The first is net interest income, which is interest income generated by earning assets less interest expense on interest-bearing liabilities. The second is non-interest income, which primarily consists of customer service charges and fees but also comes from non-customer sources such as bank-owned life insurance. The majority of the Company's non-interest expenses are operating costs that relate to providing a full range of banking services to our customers.

NET INTEREST INCOME AND NET INTEREST MARGIN

For the third quarter, net interest income increased by \$114,000, or 1%, to \$14.1 million in 2007 from \$13.9 million in 2006. For the first nine months, net interest income increased by \$776,000, or 2%, to \$42.3 million in 2007 from \$41.5 million in 2006. The level of net interest income depends on several factors in combination, including growth in earning assets, yields on earning assets, the cost of interest-bearing liabilities, the relative volumes of earning assets and interest-bearing liabilities, and the mix of products which comprise the Company's earning assets, deposits, and other interest-bearing liabilities. Occasionally, net interest income is also impacted by the recovery of interest on loans that have been on non-accrual status and are either sold or returned to accrual status, or by the reversal of accrued but unpaid interest for loans placed on non-accrual status.

The following Average Balances and Rates table shows, for the quarters noted, the average balance of each principal balance sheet category and the amount of interest income or interest expense associated with that category. This table also shows the calculated yields on each major component of the Company's investment and loan portfolio, the average rates paid on each key segment of the Company's interest bearing liabilities, and the net interest margin.

- (d) Represents net interest income as a percentage of average interest-earning assets.
- (e) Non-accrual loans have been included in total loans for purposes of total earning assets.
- (f) Annualized.

Table of Contents

The Volume and Rate Variances table below sets forth the dollar difference in interest earned and paid for each major category of interest-earning assets and interest-bearing liabilities for the noted periods, and the amount of such change attributable to changes in average balances (volume) or changes in average interest rates (rate). Volume variances are equal to the increase or decrease in average balance multiplied by prior period rates, and rate variances are equal to the increase or decrease in average rate times prior period average balances. Variances attributable to both rate and volume changes are calculated by multiplying the change in rate by the change in average balance.

(1) Yields on tax exempt income have not been computed on a tax equivalent basis. As shown above, pure volume variances contributed \$619,000 to net interest income in the third quarter of 2007 relative to the third quarter of 2006. The positive volume variance is the result of growth in average interest-earning

Table of Contents

assets, as evident in the Average Balances and Rates table for the quarter. Average interest-earning assets were \$52 million higher in the third quarter of 2007 than in the third quarter of 2006, an increase of 5%. The increase was due to growth of \$56 million, or 7%, in average loan balances, partially offset by a decline of \$4 million, or 2%, in average investment balances. Average other earning (non-interest) assets plus non-earning assets were 10% of average total assets in the third quarters of both 2007 and 2006, although the ratio of average demand deposits, other liabilities, and shareholders' equity to average assets declined to 29% in the third quarter of 2007 from 32% in the third quarter of 2006, due mainly to the fact that demand deposit balances were \$21 million lower. This had the unfavorable effect of increasing the percentage of the Company's assets that are funded by interest-bearing liabilities.

The volume variance was also negatively impacted by a shift in our deposit mix to higher-cost deposits. The average balance of total interest-bearing deposits increased by \$108 million, or 19%, for the third quarter of 2007, with most of the increase coming in higher-cost deposit categories. For the third quarter of 2007 relative to the third quarter of 2006, average time deposits were up by \$89 million, or 29%, and money market accounts increased by \$13 million, or 9%, while lower-cost NOW account balances increased by \$19 million, or 30%, and savings accounts fell by \$12 million, or 18%. The overall growth in average deposits allowed us to retire some of our costly borrowings, though, helping to soften the negative impact of the deposit shift. The average balance of borrowed funds was \$45 million lower in the third quarter of 2007 than in the third quarter of 2006, a drop of 20%.

The shift in our deposit mix caused our weighted average cost of interest-bearing deposits to increase by 50 basis points for the quarterly comparison, which was the reason for the 17 basis point increase in the cost of interest-bearing liabilities. Since the weighted average yield on earning assets was the same in both the third quarter of 2007 and the third quarter of 2006, the higher cost of interest-bearing liabilities was the cause of our negative \$320,000 rate variance for the quarter.

The Company's net interest margin, which is tax-equivalent net interest income expressed as a percentage of average interest-earning assets, is affected by many of the same factors discussed relative to rate and volume variances. Our net interest margin was 5.23% in the third quarter of 2007 as compared to 5.44% in the third quarter of 2006, a drop of 21 basis points. During much of the intervening period the Company's interest rate risk position was slightly asset-sensitive, meaning that all else being equal the Company's net interest margin would typically be favorably impacted when rates are rising and negatively impacted when rates decline. In reality, short-term rates were rising for a period of about two years prior to third quarter 2006, and remained relatively stable thereafter until the Federal Reserve Board approved a decrease in the fed funds rate in mid-September 2007. After rates stopped increasing in 2006, deposit rates, which typically lag when market interest rates are increasing, began to catch up to the increases experienced in earning asset yields when rates were rising. This contributed to the decline in our net interest margin. The drop in average non-interest bearing and lower-cost core deposits and our relatively low-margin growth during the last half of 2006 also had a negative impact.

Our net interest margin for the third quarter of 2007 would have been even lower, but strong growth in aggregate deposits and declining assets during 2007 allowed us to reduce our reliance on wholesale borrowings and partially offset some of the negative factors noted in the previous paragraph. Because of our current interest rate risk profile, the Company's net interest margin could experience a short-term boost from declining rates, but would likely suffer from further compression in the longer-term under declining rate scenarios or if interest rates were to rise. That negative impact will be partially offset and net interest income should continue to increase if we are able to reverse current trends and successfully grow our loans and core deposits.

For the first nine months of 2007 relative to the first nine months of 2006, the favorable volume variance in net interest income was \$2.6 million, while the rate variance was negative \$1.2 million and the variance attributable to both rate and volume was negative \$619,000. As with the quarterly results, growth in earning assets had the biggest impact on the volume variance for the year-to-date period. Average interest-earning assets were \$89 million higher in the first nine months of 2007 than in the first nine months of 2006, an increase of 9%. This increase was the result of growth in average loan balances totaling \$94 million, or 12%, which was partially offset by a decline of \$6 million, or 3%, in average investment balances. As with the quarterly comparison, a \$20 million drop in average demand deposits was the primary contributor to a lower ratio of average demand deposits, other liabilities, and shareholders'

Table of Contents

equity to average assets, which had a negative impact on the year-to-date volume variance. A shift among average interest-bearing deposits to higher-cost categories is also evident in the year-to-date numbers. The deposit changes include an increase of \$88 million, or 30%, in the average balance of relatively costly time deposits, and an increase of \$13 million, or 11% in average money market deposits. Average NOW accounts increased by \$9 million, or 13%, and savings deposits fell by \$11 million, or 16%.

The unfavorable rate variance for the first nine months was due to the fact that our cost of interest-bearing liabilities increased by 63 basis points, while our yield on interest-earning assets increased by only 24 basis points. The impact of the disproportionate increase in the cost of interest-bearing liabilities was mitigated somewhat by the Company's large net interest position, which is the difference between interest-earning assets and interest-bearing liabilities. The Company's net interest position was \$257 million in the first nine months of 2006, the base period for the rate variance calculations, thus the rate increase for earning assets was applied to a substantially larger volume than the rate increase for interest-bearing liabilities and had a relatively larger impact. The Company's net interest margin for the first nine months of 2007 was 5.31%, a decline of 35 basis points relative to the net interest margin of 5.66% in the first nine months of 2006, due to the factors delineated in the quarterly comparison.

PROVISION FOR LOAN AND LEASE LOSSES

Credit risk is inherent in the business of making loans. The Company sets aside an allowance for loan and lease losses through periodic charges to earnings, which are reflected in the income statement as the provision for loan losses. These charges are in amounts sufficient to achieve an allowance for loan and lease losses that, in management's judgment, is adequate to absorb losses inherent in the Company's loan portfolio.

Our loan loss provision was \$351,000 lower for the third quarter and \$848,000 lower for the year-to-date period in 2007 relative to 2006. The specific reserves for potential losses on a certain agricultural production loan were increased in 2007, and reserves have been strengthened for balances outstanding on equity lines and unsecured credit lines, but the impact of those increases on our loan loss provision was offset by the effect of a lower rate of growth in loan balances and a higher level of recoveries on previously charged-off balances in 2007. Recoveries, which are added back to the allowance for loan and lease losses and thus help reduce our need for a provision, were \$349,000 for the third quarter of 2007 and \$112,000 for the third quarter of 2006. Recoveries were \$828,000 for the first nine months of 2007, and \$569,000 for the like period in 2006. The year-to-date comparison was also affected by the release of the \$500,000 loan loss allowance associated with credit card balances that were sold in the second quarter of 2007. The procedures for monitoring the adequacy of the allowance, and detailed information on the allowance, are included below in Allowance for Loan and Lease Losses.

Table of Contents**NON-INTEREST REVENUE AND OPERATING EXPENSE**

The following table provides details on the Company's non-interest income and operating expense for the third quarter and first nine months of 2007 relative to the third quarter and first nine months of 2006:

Non Interest Income/Expense

(2) Annualized

The Company's results reflect an increase of \$558,000, or 20%, in total other operating income for the quarter ended September 30, 2007 relative to the quarter ended September 30, 2006, due mainly to an increase in overdraft and returned item charges as reflected in service charges on deposits. Total other operating income increased to an annualized 1.23% of average earning assets in the third quarter of 2007, from 1.07% of average earning assets in the third quarter of 2006. For the first nine months, total other operating income was \$11.1 million in 2007 and \$8.2 million in 2006, representing an increase of \$2.9 million, or 35%. Much of the year-to-date increase came from the \$1.6 million gain on sale of credit card loans that was recognized in the second quarter of 2007, although an increase in service charges on deposits was also a major contributor. Total operating income was an annualized 1.36% of average earning assets in the first nine months of 2007, relative to 1.10% in the first nine months of 2006.

For the third quarter, service charges on deposit accounts increased by \$607,000, or 41%, despite a 1% drop in average transaction account balances. For the first nine months, average transaction account balances were 3% lower, but service charges on deposits were up by \$941,000, or 21%. The increase in service charges for both the quarter and year-to-date are due in part to an increase in the number of transaction accounts resulting from current marketing initiatives, and higher levels of overdraft activity. At September 30, 2007, the Company had 43,000 deposit accounts that are considered to be transaction accounts (demand deposit and NOW accounts), a 19% increase relative to the number of transaction accounts at September 30, 2006. Recently implemented fee increases and a system upgrade that allows overdrafts on point-of-sale transactions also contributed to the increase in service

Table of Contents

charges on deposits. We expect that our planned fourth quarter implementation of a deposit scoring system, which allows selective increases in informal overdraft lines and helps minimize our exposure to higher-risk accounts, will lead to even higher levels of deposit-related service charges in the future, although no assurance can be provided in that regard.

Other service charges, commissions, and fees declined by \$245,000, or 23%, for the third quarter of 2007 relative to the third quarter of 2006, and by \$56,000, or 2%, for the first nine months of 2007 compared to the prior year. The quarterly decline includes the following significant changes: an increase of \$118,000 in costs associated with our tax credit investments (reflected as a reduction of income), due in part to an additional \$3 million investment commitment made in August 2007; a \$207,000 drop in credit card revenue, which is now limited to interchange and interest sharing arrangements subsequent to the sale of our credit card portfolio; and increases of \$72,000 and \$54,000, respectively, in interchange fees from point-of-sale transactions and operating lease rental income. With new contracts and processing arrangements in the electronic funds transfer (EFT) arena commencing in early November 2007, both the revenue and expense associated with ATM and point-of-sale transactions should be favorably impacted going forward, as discussed in Note 9 to the financial statements.

The year-to-date decline in other service charges, commissions, and fees includes a \$184,000 decline in credit card revenue and a \$150,000 increase in tax credit investment costs, which were offset by a \$178,000 increase in point-of-sale interchange fees, a \$141,000 increase in dividends on Federal Home Loan Bank (FHLB) stock, and a \$73,000 increase in operating lease income. Numerous other miscellaneous fluctuations make up the difference.

Bank-owned life insurance (BOLI) income increased by \$185,000, or 130%, in the third quarter of 2007 relative to the third quarter of 2006, and by \$362,000, or 63%, for the first nine months of 2007 compared to the first nine months of 2006. At September 30, 2007 the Company had \$25.8 million invested in single-premium general account BOLI, with an interest credit rate that does not change frequently and is floored at no less than 3%. Income from this BOLI is used to fund expenses associated with executive salary continuation plans and director retirement plans. In addition, as of September 30, 2007 the Company had \$1.9 million invested in separate account BOLI, the earnings on which help offset deferred compensation accruals for certain directors and senior officers. These deferred compensation BOLI accounts have returns pegged to participant-directed investment allocations which can include equity, bond, or real estate indices, and are thus subject to gains or losses. Part of the increase in BOLI income for the third quarter of 2007 is due to income from an additional \$6 million investment in general account BOLI made in December 2006, but the majority is from a \$123,000 increase in income on separate account BOLI. The year-to-date increase is from a \$131,000 boost in returns on separate account BOLI, plus income from the additional investment in general account BOLI.

Other non-interest income includes gains and losses on the disposition of real properties and other assets, and rental income generated by the Company's alliance with Investment Centers of America (ICA). Other non-interest income increased by \$29,000, or 32%, for the third quarter, and by \$16,000, or 6%, for the year-to-date comparison, due mainly to higher ICA income.

Total operating expense (non-interest expense) was \$8.8 million for the quarter ended September 30, 2007, an increase of \$551,000, or 7%, relative to total operating expense for the same period in 2006. Non-interest expenses rose slightly to an annualized 3.22% of average earning assets for the third quarter of 2007 from 3.17% in the third quarter of 2006. For the first nine months of 2007, total non-interest expense was \$1.9 million higher than in the first nine months of 2006, an increase of 8%. Total non-interest expense fell slightly to an annualized 3.29% of average earning assets in the first nine months of 2007, from 3.32% in the first nine months of 2006.

The largest component of non-interest expense, salaries and employee benefits, fell by \$38,000, or 1%, for the third quarter of 2007 relative to the third quarter of 2006, and was up by \$949,000, or 8%, for the first nine months of 2007 compared to the first nine months of 2006. Both the quarterly decline and the year-to-date increase were significantly affected by fluctuations in salaries attributed to successful loan originations, which are deferred from current expense and amortized as an adjustment to loan yields pursuant to FAS 91. FAS 91 deferrals increased by \$149,000 for the quarter because of a revision in our estimate of the personnel costs involved in each successfully-originated loan, pursuant to an annual review of such costs in August 2007. The third quarter

Table of Contents

increase in deferred salaries was not large enough to offset the year-to-date impact of declining loan origination activity, however, and FAS 91 deferrals thus show a reduction of \$411,000 for the nine months ended September 30, 2007 relative to the same period last year. Regular annual salary increases and employee costs for the new Delano branch also impacted both third quarter and year-to-date personnel costs. The cost of benefits increased by \$45,000, or 5%, in the third quarter of 2007 relative to the third quarter of 2006, and increased by \$46,000, or 1%, on a year-to-date basis. Benefits would have actually declined for both the third quarter and year-to-date comparisons, if not for increases of \$70,000 and \$71,000, respectively, in third quarter and year-to-date deferred compensation expense. These deferred compensation increases are roughly offset by increases in separate account BOLI income plus related changes in deferred taxes. Factoring out deferred compensation charges, the favorable trend in benefits is due mainly to declining workers compensation insurance premiums, which were down by \$17,000 for the third quarter and by \$113,000 for the first nine months of 2007 relative to the same periods in 2006. Salaries and benefits fell to 45.8% of total non-interest expense for the third quarter of 2007 from 49.3% in the third quarter of 2006, and was 49.1% of total non-interest expense for the first nine months of 2007 and 2006.

Aggregate occupancy expense was about the same for the third quarter of 2007 compared to 2006, and fell by \$104,000, or 2%, for the first nine months of 2007 relative to the prior year. We experienced typical inflationary increases in rent and other occupancy costs in both the third quarter and first nine months of 2007, along with costs associated with our Delano branch which opened in March 2007. However, these increases were offset by lower furniture and equipment depreciation, which was down by \$110,000 for the quarterly comparison and by \$255,000 for the year-to-date comparison because of some equipment and large fixtures which became fully depreciated. The year-to-date decline also includes a \$102,000 drop in property taxes which resulted from one-time property tax refunds received in the first quarter of 2007 pursuant to re-assessments. Occupancy expense was 19.2% of total non-interest expense for the third quarter of 2007, down from 20.5% for the third quarter of 2006, and was 18.0% of total non-interest expense for the first nine months of 2007 as compared to 19.8% in the first nine months of 2006.

Advertising and marketing expenses increased by \$125,000, or 43%, for the quarter, and by \$528,000, or 65% for the year-to-date period, because of costs associated with our high-performance checking initiative targeting consumer deposits (explained further below, in the Deposits section), which was implemented at the beginning of 2007. Marketing expenses are expected to increase by around \$60,000 per quarter commencing in November 2007, when a similar high-performance checking initiative is instituted for business accounts.

Other notable changes in non-interest expenses for the quarter include deposit services costs, credit card costs, postage, directors' deferred compensation and EFT contract review expenses included in other professional services, and operational charge-offs included in sundry and tellers. Deposit services costs were up by \$79,000, or 18%, mainly because of a \$40,000 increase in ATM network costs, although those costs should start to decline in November 2007 as the terms of our new EFT contracts commence. Credit card costs would have been completely eliminated in the third quarter of 2007 if not for a \$249,000 conversion fee related to the sale of our credit card portfolio. Our accrual for earnings on deferred compensation balances for select directors increased by \$94,000 in the third quarter, although, as noted in the discussion on salaries and benefits, deferred compensation increases are offset by increases in separate account BOLI income plus related changes in deferred taxes. EFT contract review expenses are one-time consulting costs which added about \$95,000 to other professional services expense for the quarter. The increase in postage expense of \$57,000, or 66%, is related to our current direct-mail marketing initiatives and the cost of mailing certain mandatory compliance notices to our customers. Operational charge-offs, including debit card losses and losses related to other fraudulent deposit activities, more than tripled in the third quarter of 2007 relative to 2006, increasing to \$78,000. We are hopeful that a deposit scoring system and an enhanced fraud detection system currently in process of installation will help keep future losses to a minimum.

Significant changes in other year-to-date expenses consist of many of the fluctuations discussed in the previous paragraph, and also include changes in costs associated with foreclosed assets, other operating costs, and legal costs. Credit card costs were up by \$57,000, or 11%, postage increased by \$130,000, or 52%, and other professional services expense escalated by \$215,000, or 28%, all for the same reasons outlined in the comparative third quarter discussion. Foreclosed asset costs declined because of the write-down of other real estate owned (OREO) in the first quarter of 2006. The other category under other operating costs is up by \$96,000, or 12%, for the first nine months of 2007 compared to the first nine months of 2006, due mainly to higher depreciation expense on

Table of Contents

operating leases and higher education and training costs in the first quarter of 2007. Comprising most of the \$62,000 increase in legal & accounting, legal costs increased by \$51,000, or 22%, primarily because of additional costs associated with our proxy statement and annual meeting in 2007.

Since net interest plus non-interest income increased by 4% but non-interest expense increased by 7%, the Company's tax-equivalent overhead efficiency ratio increased to 49.38% for the third quarter of 2007 from 48.53% for the third quarter of 2006. Because of the impact of revenue from the sale of our credit card portfolio in the second quarter of 2007, our year-to-date overhead efficiency ratio of 48.87% for 2007 was almost identical to the ratio of 48.84% achieved for the first nine months of 2006. The overhead efficiency ratio represents total operating expense divided by the sum of fully tax-equivalent net interest and non-interest income, with the provision for loan losses, investment gains and losses, and other extraordinary income and expenses excluded from the equation.

PROVISION FOR INCOME TAXES

The Company sets aside a provision for income taxes on a monthly basis. The amount of the tax provision is determined by applying the Company's statutory income tax rates to pre-tax book income, adjusted for permanent differences between pre-tax book income and actual taxable income. Such permanent differences include but are not limited to tax-exempt interest income, increases in the cash surrender value of BOLI, California Enterprise Zone deductions, certain expenses that are not allowed as tax deductions, and tax credits. The Company's tax provision totaled \$2.6 million, or 33.2% of pre-tax income for the third quarter of 2007, and \$2.5 million, or 33.9% of pre-tax income for the third quarter of 2006. The primary reason for the declining tax accrual rate is a \$3 million tax credit investment committed to in August 2007. Year-to-date, the provision for income taxes increased to \$8.3 million, or 33.9% of pre-tax income in 2007, from \$7.3 million, or 33.6% of pre-tax income in the first nine months of 2006. The increase in the tax accrual rate for the year-to-date comparison is principally because the \$1.6 million gain on sale of loans is taxable at our marginal blended tax rate of 42%.

BALANCE SHEET ANALYSIS

EARNING ASSETS

INVESTMENTS

The major components of the Company's earning asset base are its investments and loans, and the detailed composition and growth characteristics of both are significant determinants of the financial condition of the Company. The Company's investments are analyzed in this section, while the loan and lease portfolio is discussed in a later section of this Form 10-Q.

The Company's investments consist of debt and marketable equity securities (together, the investment portfolio), investments in the time deposits of other banks, and overnight fed funds sold. These serve several purposes: 1) they provide liquidity to even out cash flows from the loan and deposit activities of customers; 2) they provide a source of pledged assets for securing public deposits, bankruptcy deposits and certain borrowed funds which require collateral; 3) they constitute a large base of assets with maturity and interest rate characteristics that can be changed more readily than the loan portfolio, to better match changes in the deposit base and other funding sources of the Company; 4) they are an alternative interest-earning use of funds when loan demand is light; and 5) they can provide partially tax exempt income.

Although the Company currently has the intent and the ability to hold the securities in its investment portfolio to maturity, the securities are all marketable and are classified as available for sale to allow maximum flexibility with regard to interest rate risk and liquidity management. Pursuant to SFAS 115, the balance of available for sale securities is carried on the Company's financial statements at its estimated fair market value, with monthly tax-effected mark-to-market adjustments made vis-à-vis the accumulated other comprehensive income account in shareholders' equity. The following table sets forth the Company's investment portfolio by investment type as of the dates noted.

Table of Contents**Investment Portfolio**

(dollars in thousands, unaudited)

	September 30, 2007		December 31, 2006	
	Amortized Cost	Fair Market Value	Amortized Cost	Fair Market Value
Available for Sale				
US Treasury securities	\$ 499	\$ 502	\$ 501	\$ 496
US Gov t agencies	19,602	19,607	18,035	17,879
Mortgage-backed securities	111,088	108,623	121,204	118,175
State & political subdivisions	55,859	55,814	53,387	53,713
Other equity securities	6	11	6	9
Total Investment Securities	\$ 187,054	\$ 184,557	\$ 193,133	\$ 190,272

The fair market value (which, for the Company, is the carrying value) of the investment portfolio declined by \$6 million, or 3%, during the first nine months of 2007. Approximately \$51 million of the portfolio total at September 30, 2007 represents remaining balances from the \$100 million leverage strategy implemented in April 2004. The leverage balances are funded in part by \$27 million in fixed-rate FHLB borrowings obtained at the commencement of the leverage strategy, of which \$5 million is currently classified as long term and \$22 million represents balances that mature in April 2008. Short-term FHLB borrowings that are rolled over every 30 to 60 days make up the difference.

During the first nine months of 2007, mortgage-backed securities declined by \$10 million due primarily to prepayments associated with the leverage strategy portfolio. Municipal bonds increased by \$2 million as the Company has taken advantage of relative value in that sector, and US Government agency bonds were increased by close to \$2 million for pledging purposes. Securities that were pledged as collateral for FHLB borrowings, repurchase agreements, public deposits and for other purposes as required or permitted by law totaled \$165 million at September 30, 2007, and \$166 million at December 31, 2006. There were no overnight fed funds sold at September 30, 2007 and \$6.3 million at December 31, 2006, and the Company's investment in the time deposits of other banks totaled \$80,000 at both September 30, 2007 and December 31, 2006. The balance of fed funds sold typically averages less than \$1 million, and the drop in the end-of-period balance is simply due to the timing of cash flows. Aggregate investments were 15% of total assets at September 30, 2007 and 16% at December 31, 2006.

LOAN PORTFOLIO

The Company's loans and leases, gross of the associated allowance for losses and deferred fees and origination costs, totaled \$907 million at the end of September 2007. This represents an increase of \$19 million, or 2%, since December 31, 2006. Based on a general slowdown in construction and real estate development in our footprint, we expect that the Company could continue to experience relatively slow loan growth for the remainder of the year.

The Company has no subprime exposure in its loan portfolio. However, approximately \$10 million in residential mortgage loans and \$7 million in residential construction loan balances and commitments are stated income loans, which can be viewed as riskier than loans for which full documentation is provided. To help mitigate this perceived risk, our mortgage loans and construction loans are typically underwritten at loan to value ratios of 80% or less. Furthermore, our conservative underwriting standards help provide assurance that the borrowers on these loans are legitimate, creditworthy borrowers.

A comparative schedule of the distribution of the Company's loans at September 30, 2007 and December 31, 2006, by outstanding balance as well as by percentage of total loans, is presented in the following Loan and Lease Distribution table. The balances shown for each loan type are before deferred or unamortized loan origination, extension, or commitment fees, and deferred origination costs for loans in that category.

Consumer Credit cards	0.00%	0.95%
Direct Financing Leases	2.39%	2.27%
Total	100.00%	100.00%

The majority of the year-to-date growth in our loan portfolio was in commercial real estate loans, which increased by \$23 million, or 6%. Commercial real estate loans increased to 49% of total loans at September 30, 2007, from 47% at December 31, 2006. Real estate loans secured by residential properties increased by \$7 million, or 4%. The increase for residential real estate loans was centered in relatively low loan-to-value mortgage loans rather than in equity lines, which actually declined by \$7 million.

Agricultural production loans were down by \$1 million, or 7%. Ag production balances include close to \$11 million outstanding to a potential problem borrower, although a bumper crop and favorable market conditions have eased our concerns somewhat. That borrower is currently paying as agreed and a large portion of the balance will likely be paid down late this year or early next year, although no guarantee can be provided that we will continue to receive the timely payment of principal and interest.

As shown above, the sale of our credit card portfolio in June 2007 reduced consumer credit card balances to zero. The loans that were sold also included about \$3 million in balances outstanding on business credit cards that were classified as commercial loans, which had a negative impact on year-to-date growth in commercial and industrial loans. Commercial loans increased only nominally during the first nine months of 2007. SBA loan balances fell by \$5 million, or 20%, while direct finance leases grew by about \$2 million, or 8%.

Table of Contents

Although not reflected in the loan totals above, from time to time the Company originates and sells agricultural and residential mortgage loans to certain other investors, and we currently provide servicing for a small number of SBA loans and agricultural mortgage loans. The balance of loans serviced for others, including participations sold, was \$9 million at September 30, 2007 as compared to \$17 million at December 31, 2006, a fairly significant drop due mainly to a pay-down on a large agricultural mortgage loan.

OFF-BALANCE SHEET ARRANGEMENTS

In the normal course of business, the Company makes commitments to extend credit as long as there are no violations of any conditions established in the outstanding contractual arrangement. Unused commitments to extend credit totaled \$224 million at September 30, 2007 as compared to \$301 million at December 31, 2006, although it is expected that not all of these commitments will ultimately be drawn down. The drop in unused commitments is due to the elimination of \$40 million in unutilized credit card lines and the slowdown in construction lending. Unused commitments represented approximately 25% of gross loans outstanding at September 30, 2007, and 34% as of December 31, 2006. In addition to unused loan commitments, the Company had letters of credit totaling \$20 million at September 30, 2007 and \$29 million at December 31, 2006. This represents 8% of total commitments as of September 30, 2007 and 9% at December 31, 2006.

The effect on the Company's revenues, expenses, cash flows and liquidity from the unused portion of the commitments to provide credit cannot be reasonably predicted because there is no guarantee that the lines of credit will ever be used. For more information regarding the Company's off-balance sheet arrangements, see Note 8 to the financial statements located elsewhere herein.

NONPERFORMING ASSETS

Nonperforming assets are comprised of the following: loans for which the Company is no longer accruing interest; loans 90 days or more past due and still accruing interest (although loans are generally placed on non-accrual status when they become 90 days past due, whether or not interest is still being collected); restructured loans where the terms of repayment have been renegotiated resulting in a deferral of interest or principal; and foreclosed assets, including OREO. Management's classification of a loan as non-accrual or restructured is an indication that there is reasonable doubt as to the Company's ability to collect principal or interest on the loan. At that point, the Company stops accruing income from the interest on the loan, reverses any interest that has been accrued but is not yet collected, and recognizes interest income only when cash interest payments are received and as long as the collection of all outstanding principal is not in doubt. These loans may or may not be collateralized, but in all cases collection efforts are continuously pursued. The following table presents comparative data for the Company's nonperforming assets:

Table of Contents**Non-performing Assets**

(dollars in thousands, unaudited)

SUBTOTAL			
TOTAL NONPERFORMING LOANS	1,246	689	565
Foreclosed assets			
Total nonperforming assets	\$ 1,246	\$ 689	\$ 565
Restructured loans	N/A	N/A	N/A
Nonperforming loans as a % of total gross loans and leases	0.14%	0.08%	0.07%
Nonperforming assets as a % of total gross loans and leases and foreclosed assets	0.14%	0.08%	0.07%

Total nonperforming assets were \$1.2 million at September 30, 2007 relative to \$689,000 at December 31, 2006, an increase of \$557,000, or 81%. While this represents a significant percentage increase, non-performing assets are still at a relatively low level, only 0.14% of loans, and our allowance for loan and lease losses is almost 10 times the balance of non-performing assets. Non-accruing commercial loans declined by

Edgar Filing: SIERRA BANCORP - Form 10-Q

\$370,000, to zero at September 30, 2007, as the result of a commercial loan that was charged-off in the first quarter of 2007. Approximately \$202,000 of that charged-off balance was recovered in the second quarter. Non-accruing SBA loans also experienced a significant reduction, dropping to only \$24,000 at September 30, 2007 from \$262,000 at December 31, 2006 due to the successful liquidation of all three loans that comprised the balance at December 31, 2006 and the addition of a small loan since then. The largest increase for any individual category was in real estate loans secured by commercial, construction and development properties, which went up by \$983,000 due to the addition of three residential properties under construction. These properties are in the process of foreclosure, after which we plan to complete construction and market them. The loss expected upon disposition has been fully reserved. The \$218,000 increase in residential real estate loans on non-accrual consists of residential equity lines for which repayment has become uncertain. Approximately \$21,000 of the September 30, 2007 total nonperforming balance in the table above is guaranteed by the U.S. Government, and an additional \$1.2 million is secured by real estate.

Table of Contents

Nonperforming assets were 0.14% of total gross loans and leases plus foreclosed assets at September 30, 2007 and 0.08% at December 31, 2006, up from 0.07% at September 30, 2006. While our current balance of nonperforming assets is still quite low relative to levels seen in years past, we recognize that a further increase in the dollar amount of non-accrual loans and leases is possible in the normal course of business as we expand our lending activities, and we also expect occasional foreclosures as a last resort in the resolution of some problem credits.

ALLOWANCE FOR LOAN AND LEASE LOSSES

The allowance for loan and lease losses is established through a provision for loan and lease losses based on management's evaluation of known and inherent risks in the Company's loan portfolio. At September 30, 2007 the allowance for loan and lease losses was \$12.2 million, or 1.35% of gross loans, as compared to the \$11.6 million allowance at December 31, 2006 which was 1.30% of gross loans. An allowance for potential losses inherent in unused commitments is included in other liabilities, and totaled \$160,000 at September 30, 2007.

We employ a systematic methodology for determining the appropriate level of the allowance for loan and lease losses and adjusting it on at least a quarterly basis. Our process includes a periodic review of individual loans that have been specifically identified as problem loans or have characteristics that could lead to impairment, as well as detailed reviews of other loans either individually or in pools. While this methodology utilizes historical data and other objective information, the classification of loans and the establishment of the allowance for loan and lease losses are both to some extent based on management's judgment and experience.

Our methodology incorporates a variety of risk considerations, both quantitative and qualitative, in establishing an allowance for loan and lease losses that management believes is appropriate at each reporting date. Quantitative factors include our historical loss experience, delinquency and charge-off trends, collateral values, fluctuations in nonperforming loan balances, the rate of loan portfolio growth, and other factors. Quantitative factors also incorporate known information about individual loans, including a borrower's sensitivity to interest rate movements or other quantifiable external factors such as commodity prices or acts of nature (freezes, earthquakes, fires, etc.).

Qualitative factors include the general economic environment in our markets and, in particular, the state of the agricultural industry and other key industries in the Central San Joaquin Valley. The way a particular loan might be structured, the extent and nature of waivers of existing loan policies, the results of bank regulatory examinations, and model imprecision are additional qualitative factors that are considered.

The table that follows summarizes the activity in the allowance for loan and lease losses for the periods indicated.

Edgar Filing: SIERRA BANCORP - Form 10-Q

(1) Includes Small Business Administration Loans

The allowance is increased by a provision for possible loan and lease losses charged against current earnings and by the recovery of previously charged-off balances, and it is reduced by loan charge-offs. Specifically identifiable and quantifiable losses are immediately charged off against the allowance; recoveries are generally recorded only when cash payments are received subsequent to the charge off. Despite increased specific reserves on a certain agricultural production loan and increased general reserves for equity lines and unsecured credit lines, the Company's provision for loan and lease losses was reduced by \$351,000 for the third quarter of 2007 relative to the third quarter of 2006, and was \$848,000 lower in the first nine months of 2007 than in the first nine months of 2006. As noted previously, the provision was lower because of the sale of the credit card portfolio, a higher level of recoveries and slower loan growth.

The annualized level of net charge-offs to average loans and leases dropped to 0.27% for the third quarter of 2007 in comparison to 0.34% for the third quarter of 2006, and fell to 0.25% for the first nine months of 2007 from 0.27% for the first nine months of 2006. Gross loans charged off during the third quarter of 2007 increased due mainly to a \$456,000 increase in unsecured consumer lines charged off. Partially offsetting that increase was a \$484,000 decline in commercial loan charge-offs in the third quarter of 2007, because prior-year charge-offs include a single \$443,000 loan. Despite the increase in gross loans charged off, net charge-offs were \$121,000 lower in the third quarter of 2007 than in the third quarter of 2006 primarily because of a \$237,000 increase in recoveries

Table of Contents

for the quarter, including the recoupment of \$253,000 of previously charged-off principal on a single commercial loan. As with the third quarter, gross charge-offs increased for the first nine months of 2007 primarily because of an increased level of unsecured consumer loan charge-offs and residential equity loan write-downs, partially offset by a decline in commercial loan charge-offs. Recoveries were also higher for the year-to-date period, again primarily in the commercial loan category, but the increase wasn't large enough to offset the increase in gross charge-offs so net charge-offs increased by \$54,000 for the nine months ended September 30, 2007.

The Company considers its allowance for loan and lease losses at September 30, 2007 to be adequate to cover specifically identified losses and other losses inherent in its loan portfolio. However, no assurance can be given that the Company will not experience substantial future losses relative to the size of the allowance.

OTHER ASSETS

Cash and due from banks fell nearly \$15 million, or 28%, during the first nine months of 2007. The majority of the difference is related to the timing of collection of outstanding cash items (checks), but there also appears to be a \$2 million to \$3 million permanent reduction resulting from our conversion to electronic image presentment for checks sent for collection. Since the ending balance of cash and due from banks ultimately depends on the timing of collection, it is subject to significant fluctuation in the normal course of business. While cash flows are normally predictable within limits, those limits are fairly broad and the Company manages its cash position through the utilization of overnight loans to and borrowings from correspondent banks, including the Federal Home Loan Bank of San Francisco. Should a large short overnight position persist for any length of time, the Company typically attempts to raise money through focused retail deposit gathering efforts or by adding brokered time deposits. If a long position is prevalent, the Company will, to the extent possible, let brokered deposits roll off as they mature.

Because of frequent balance fluctuations, a more accurate gauge of cash management efficiency is the average balance for the period. The average balance of cash and due from banks was about \$38 million for the first nine months of 2007 and \$36 million for the third quarter of 2007, both of which are lower than the \$40 million average for all of 2006 despite an increase in the number of branches. Average cash balances have been well-controlled in 2007 due to close monitoring and effective management of branch cash levels, and our conversion to electronic presentment for all checks which has helped reduce the level of cash items in process of collection. We expect that average cash balances will increase in the future, however, as new branches become operational and our transaction account customer base expands.

Net premises and equipment increased by \$634,000, or 4%, during the first nine months of 2007, due to the addition of the Delano branch and the selective remodeling of certain other branches. Other assets increased by only \$616,000, because a \$3 million drop in restricted stock was mostly offset by increases in tax credit investments and the net cash surrender value of BOLI. At September 30, 2007, the largest components of other assets are \$28 million in bank-owned life insurance (see discussion of BOLI in Non-Interest Revenue and Operating Expense section above), a \$14 million investment in low-income housing tax credit funds, an aggregate \$7 million investment in restricted stock, accrued interest receivable totaling \$7 million, goodwill of about \$6 million, and a net deferred tax asset of \$5 million. Restricted stock is comprised primarily of FHLB stock that fluctuates in conjunction with our FHLB borrowings. This stock is not deemed to be marketable or liquid and is thus not grouped with the Company's investments described above. Dividends received on FHLB stock are reflected in other non-interest income rather than interest income, and are not factored into our yield analysis. The goodwill on our books is primarily the result of our acquisition of Sierra National Bank in 2000. We conduct an annual analysis of goodwill by evaluating the fair value (market capitalization) of the Company relative to its carrying value (book value of shareholders equity). As long as the fair value exceeds the carrying value, which has been the case every year we have conducted this evaluation, no impairment is deemed to exist and the measurement of an impairment loss becomes unnecessary.

Table of Contents**DEPOSITS AND INTEREST BEARING LIABILITIES****DEPOSITS**

Another key balance sheet component impacting the Company's net interest margin is our deposit base. Deposits provide liquidity to fund growth in earning assets, and the Company's net interest margin is improved to the extent that growth in deposits can be concentrated in less volatile and typically less costly core deposits, which include demand deposit accounts, interest-bearing demand accounts (NOW accounts), savings accounts, money market demand accounts (MMDA's), and time deposits under \$100,000. Overall, deposits increased by \$18 million, or 2%, to \$887 million at September 30, 2007 from \$868 million at December 31, 2006. That increase is net of a \$20 million reduction in wholesale-sourced brokered deposits. Core deposits increased by \$8 million, or 1%, during the first nine months of 2007, but would have grown at twice that rate if not for a single core deposit that our customer temporarily transferred out at quarter-end, presumably to pay down a borrowing line with another lender.

A comparative schedule of the distribution of the Company's deposits at September 30, 2007 and December 31, 2006, by outstanding balance as well as by percentage of total deposits, is presented in the following Deposit Distribution Table.

Deposit Distribution

(dollars in thousands, unaudited)

	September 30 2007	December 31 2006
Demand	\$ 231,831	\$ 281,024
NOW	89,266	64,599
Savings	53,690	62,922
Money Market	144,303	115,266
TDOA's & IRA's	24,442	23,321
Time deposit < \$100,000	122,284	110,233
Time deposits ≥ \$100,000	220,763	211,080
Total Deposits	\$ 886,579	\$ 868,445
<u>Percentage of Total Deposits</u>		
Demand	26.15%	32.36%
NOW	10.07%	7.43%
Savings	6.05%	7.25%
Money Market	16.28%	13.27%
TDOA's & IRA's	2.76%	2.69%
Time deposit < \$100,000	13.79%	12.69%
Time deposits ≥ \$100,000	24.90%	24.31%
Total	100.00%	100.00%

Despite our current deposit-oriented marketing initiatives we have experienced a challenging deposit environment in 2007, with migration from non-interest demand deposits and relatively low-cost savings accounts into higher-cost NOW accounts, money market accounts and time deposits. Most of our real growth in deposit balances appears to have taken place in relatively higher-cost time deposits. During the first nine months of 2007, non-interest bearing demand deposits fell by \$49 million, or 18%, and represented 26% of total deposits at September 30, 2007 compared to 32% at December 31, 2006. Savings account balances dropped \$9 million, or 15%, to 6% of total deposits at September 30, 2007 from 7% at year-end 2006. On the other hand, NOW accounts increased by \$25 million, or 38%, expanding to 10% of total deposits at September 30, 2007, from 7% at the end of 2006, and MMDA's increased by \$29 million, or 25%, rising to 16% of total deposits at September 30, 2007 from 13% at December 31, 2006. Time deposits under \$100,000, which are classified as core deposits, increased by \$12 million, or 11%, while jumbo time deposits, or time deposits greater than or equal to \$100,000, increased by \$10 million, or 5%. Jumbo time deposits would have increased by close to \$30 million, if not for the runoff of \$20 million in wholesale-sourced brokered CD's.

Table of Contents

Much of the decline in non-interest demand deposits was caused by a \$32 million drop in business demand deposits. On the other hand, business-related MMDA s were up by \$31 million, reflecting the migration of many business accounts into our relatively high-interest money market sweep account. The \$8 million business account that was temporarily transferred out over quarter-end was a money market demand account, thus business MMDA s have, in reality, increased by even more than the period-end balance would indicate. Business deposits also experienced overall growth of about \$6 million in time deposits, while losing \$1 million and \$3 million, respectively, in NOW accounts and savings accounts.

Personal non-interest bearing demand deposits fell by about \$15 million during the first nine months of 2007, due to a shift into NOW accounts. Personal NOW balances increased by \$27 million, or 63%, as the result of this migration as well as growth in personal accounts generated by our High Performance Checking (HPC) initiative. HPC involves a direct mail campaign advertising totally free checking and a free gift for new consumer checking accounts, and includes intensive training for customer-contact personnel and the modification of retail deposit offerings to better align them with market demand. We also experienced substantial growth in personal time deposits, which increased by \$30 million, or 15%. Some of this money shifted from personal MMDA balances, which declined by \$8 million, and from personal savings account balances, which dropped by \$7 million.

Another component of customer deposits that is not classified as business or personal is public deposits, representing deposits from the State of California, municipalities, and other local agencies. Our public deposits increased by \$13 million, or 27%, with the growth split primarily between money market accounts and jumbo time deposits. The increase in public time deposit balances is due to an additional deposit obtained from the State of California in 2007.

The unfavorable shift in deposit components and the growth in time deposits had a negative impact on our net interest margin. Management recognizes that maintaining a high level of core deposits is one of the keys to sustaining a strong net interest margin, and we continue to focus energy in that direction. Our recent deposit-related efforts include the following: our HPC initiative, which will soon be expanded to include commercial deposits; the implementation of remote deposit capture capabilities; the development of online account opening capabilities; and the addition of regional business deposit specialists. No assurance can be provided that these efforts will have the desired impact on core deposit growth, however.

Information concerning average balances and rates paid on deposits by deposit type for the three months and nine months ended September 30, 2007 and September 30, 2006 is contained in the Average Rates and Balances tables appearing above in the section titled Net Interest Income and Net Interest Margin.

OTHER INTEREST-BEARING LIABILITIES

The Company s other interest-bearing liabilities include overnight borrowings from other banks (fed funds purchased), borrowings from the Federal Home Loan Bank, securities sold under agreements to repurchase, and junior subordinated debentures that consist entirely of long-term borrowings from trust subsidiaries formed specifically to issue trust preferred securities (see Capital Resources section for more information concerning our trust-preferred securities).

As of September 30, 2007, FHLB borrowings specifically linked to the leverage strategy discussed above in Investments comprised all of the Company s \$5 million in long-term borrowings. In addition, short-term borrowings include \$22 million in fixed-rate FHLB borrowings which were obtained at the commencement of the leverage strategy and mature in April 2008. The balance of our leverage-related funding is in the form of short-term FHLB borrowings that are renewed every 30 to 60 days.

Excluding overnight FHLB advances, short-term FHLB borrowings increased by \$23 million and long-term borrowings declined by \$22 million during the first nine months of 2007, as the aforementioned leverage strategy borrowings came within a year of maturing and were thus reclassified from long-term to short-term. If not for the replacement of funding necessitated by the runoff of wholesale-sourced brokered CD s, as noted in the previous section, the balance of short-term FHLB borrowings would actually not show any significant change for the year.

Table of Contents

Brokered CD s maturing during August and September 2007 were, for the most part, replaced by FHLB advances because of the favorable movement in FHLB advance rates relative to brokered CD rates. Furthermore, we have kept maturities of this replacement funding relatively short to strengthen our defensive interest rate risk posture against declining rates.

The Company uses short-term FHLB advances and overnight fed funds purchased from correspondent banks to support liquidity needs created by seasonal deposit flows, to temporarily satisfy funding needs from increased loan demand, and for other short-term purposes. Uncommitted lines are available from several correspondent banks. The FHLB line is committed, but the amount of available credit is dependent on the level of pledged collateral. There were no overnight fed funds purchased on the Company s books at September 30, 2007, compared to \$25 million outstanding at December 31, 2006. Overnight FHLB borrowings (included in short-term borrowings) declined by \$9 million for the same time period, ending the period with a balance of \$9 million. Repurchase agreements, which represent sweep accounts , or non-deposit investment accounts secured by pledged investment securities, totaled approximately \$23 million at September 30, 2007, relative to their \$26 million balance at the end of December 2006. In addition, the Company had \$31 million in junior subordinated debentures at September 30, 2007 and December 31, 2006.

OTHER NON-INTEREST BEARING LIABILITIES

Other non-interest bearing liabilities are principally comprised of accrued interest payable, accrued income taxes, other expenses accrued but unpaid, and certain clearing amounts. Other liabilities increased by \$2 million, or 15%, during the first nine months of 2007, due to an increase in our funding commitment related to tax credit investments.

LIQUIDITY AND MARKET RISK MANAGEMENT

INTEREST RATE RISK MANAGEMENT

Market risk arises from changes in interest rates, exchange rates, commodity prices and equity prices. The Company s market risk exposure is primarily that of interest rate risk, and it has established policies and procedures to monitor and limit earnings and balance sheet exposure to changes in interest rates. The Company does not engage in the trading of financial instruments or have exposure to currency exchange rates.

The principal objective of interest rate risk management (often referred to as asset/liability management) is to manage the financial components of the Company s balance sheet in a manner that will optimize the risk/reward equation for earnings and capital in relation to changing interest rates. To identify areas of potential exposure to rate changes, the Company performs an earnings simulation analysis and a market value of portfolio equity calculation on a monthly basis.

The Company utilizes Sendero modeling software for asset/liability management in order to simulate the effects of potential interest rate changes on the Company s net interest margin, and to calculate the estimated fair values of the Company s financial instruments under different interest rate scenarios. The program imports current balances, interest rates, maturity dates and repricing information for individual financial instruments, and incorporates assumptions on the characteristics of embedded options along with pricing and duration for new volumes to project the effects of a given interest rate change on the Company s interest income and interest expense. Rate scenarios consisting of key rate and yield curve projections are run against the Company s investment, loan, deposit and borrowed funds portfolios. These rate projections can be shocked (an immediate and parallel change in all base rates, up or down), ramped (an incremental increase or decrease in rates over a specified time period), economic (based on current trends and econometric models) or stable (unchanged from current actual levels).

Table of Contents

The Company uses seven standard interest rate scenarios in conducting its simulations: stable, upward shocks of 100, 200 and 300 basis points, and downward shocks of 100, 200, and 300 basis points. Our policy is to limit any projected decline in net interest income relative to the stable rate scenario for the next 12 months to less than 5% based on a 100 basis point (b.p.) shock, 10% based on a 200 b.p. shock, and 15% for a 300 b.p. shock in interest rates. As of September 30, 2007, the Company had the following estimated net interest income sensitivity profile:

	Immediate Change in Rate					
	-300 b.p.	-200 b.p.	-100 b.p.	+100 b.p.	+200 b.p.	+300 b.p.
Change in Net Int. Inc. (in \$000 s)	\$ 18	\$ 440	\$ 472	-\$ 649	-\$ 1,442	-\$ 2,368
% Change	0.03%	0.75%	0.81%	-1.11%	-2.47%	-4.06%

The above profile illustrates that if there were an immediate and sustained downward adjustment of 200 basis points in interest rates, all else being equal, net interest income over the next twelve months would likely be around \$440,000, or 0.75%, higher than net interest income under a stable rate scenario. By the same token, if there were an immediate increase of 200 basis points in interest rates, the Company's net interest income would likely be \$1.4 million, or 2.47%, lower than net interest income in a flat rate scenario.

In the past, the Company has generally been asset sensitive over a one-year time frame, meaning that interest-earning assets will re-price more quickly than interest-bearing liabilities and, all else being equal, the Company's net interest margin will be lower when short-term rates are falling and higher when short-term rates are rising. Recently, however, our interest rate risk profile has changed because we have added more long-term fixed-rate loans to our loan mix, experienced runoff in non-interest DDA's and disproportionate growth in rate-sensitive deposits, and shortened the duration of other borrowings. Our exposure to declining rates has been effectively eliminated, but the gain in net interest income that we previously would have realized in rising rate scenarios has turned negative. This has made us effectively interest-rate neutral in declining rate scenarios, and slightly liability-sensitive in rising rate scenarios. We would be liability-sensitive in declining rate scenarios, as well, and would thus gain net interest income, if not for the fact that some of the Company's variable deposit rates (on NOW accounts and savings accounts, for example) are still relatively close to a natural floor of zero. If rates were to move down to a significant degree certain deposit rates would hit this floor, but earning asset yields would continue to fall and our net interest margin would likely experience significant compression. This effect is exacerbated by the fact that prepayments on fixed-rate loans tend to increase as rates decline. Another characteristic inherent in our interest rate risk profile was experienced recently, when rates leveled off after a period of increasing rates. Margin compression occurred since our rate-sensitive liabilities were slower to reprice than rate-sensitive assets, and their cost continued to rise even after yields on rate-sensitive earning assets stopped increasing.

The economic (or fair) value of financial instruments on the Company's balance sheet will also vary under the interest rate scenarios previously discussed. Economic values for financial instruments are estimated by discounting projected cash flows (principal and interest) at current replacement rates for each account type, while the fair value of non-financial accounts is assumed to equal book value and does not vary with interest rate fluctuations. An economic value simulation is a static measure for balance sheet accounts at a given point in time, but this measurement can change substantially over time as the characteristics of the Company's balance sheet evolve and as interest rate and yield curve assumptions are updated.

The amount of change in economic value under different interest rate scenarios is dependent upon the characteristics of each class of financial instrument, including the stated interest rate or spread relative to current market rates or spreads, the likelihood of prepayment, whether the rate is fixed or floating, and the maturity date of the instrument. As a general rule, fixed-rate financial assets become more valuable in declining rate scenarios and less valuable in rising rate scenarios, while fixed-rate financial liabilities gain value as interest rates rise and lose value as interest rates decline. The longer the maturity of the financial instrument, the greater the impact a given rate change will have on its value. In our economic value simulations, estimated prepayments are factored in for financial instruments with stated maturity dates, and decay rates for non-maturity deposits are also projected based on management's best estimates. We have found that model results are highly sensitive to changes in the assumed decay rate for non-maturity deposits, in particular.

Table of Contents

The economic value of equity (EVE) is calculated by subtracting the estimated fair value of liabilities from the estimated fair value of assets. The table below shows estimated changes in the Company's EVE under different interest rate scenarios relative to a base case of current interest rates:

	Immediate Change in Rate					
	-300 b.p.	-200 b.p.	-100 b.p.	+100 b.p.	+200 b.p.	+300 b.p.
Change in EVE (in \$000 s)	\$ 23,118	\$ 15,971	\$ 8,710	-\$ 11,215	-\$ 24,216	-\$ 37,299
% Change	10.78%	7.45%	4.06%	-5.23%	-11.30%	-17.40%

The slope of EVE under varying interest rate scenarios is substantially steeper than the slope for the Company's net interest income simulations, due primarily to the fact that \$519 million in non-maturity deposits are assumed to run off at the rate of 10% per year. In contrast, our net interest income simulations incorporate growth rather than run-off for aggregate non-maturity deposits. If a higher deposit decay rate is used for EVE simulations the decline becomes more severe, while the slope conforms more closely to that of our net interest income simulations if non-maturity deposits do not run off. Under declining rates, a floor of zero (or slightly above zero) for the discount rate on variable rate deposits and other liabilities, and increased principal prepayments and calls on investment securities and fixed rate loans, partially offset the increase in the value of fixed-rate loans. During the past year, the addition of fixed-rate loans and the shift into more rate-sensitive funding has caused the negative slope in rising rate scenarios to become steeper and the slope in declining rate scenarios to move from negative to positive.

LIQUIDITY

Liquidity refers to the Company's ability to maintain cash flows that are adequate to fund operations and meet other obligations and commitments in a timely and cost-effective fashion. The Company also, on occasion, experiences short-term cash needs as the result of loan growth or deposit outflows, or other asset purchases or liability repayments. To meet short-term needs, the Company can borrow overnight funds from other financial institutions or purchase brokered deposits if deposits are not immediately obtainable from local sources. Further, funds can be obtained by drawing down the Company's correspondent bank deposit accounts, or by liquidating non-pledged investments or other assets. In addition, the Company can raise immediate cash for temporary needs by selling under agreement to repurchase those investments in its portfolio which are not already pledged as collateral. As of September 30, 2007, non-pledged securities, plus pledged securities in excess of current pledging requirements, comprised \$39 million of the Company's investment portfolio balances.

Other forms of balance sheet liquidity include but are not necessarily limited to vault cash and balances due from banks, and immediately marketable loan balances in the amount of \$16 million at September 30, 2007. In addition to the liquidity inherent in its balance sheet, the Company has off-balance-sheet liquidity in the form of lines of credit from correspondent banks, including the Federal Home Loan Bank. Availability on these lines totaled \$160 million at September 30, 2007. An additional \$55 million in credit is available from the Federal Home Loan Bank if the Company increases pledged real-estate related collateral in a like amount and purchases the required amount of FHLB stock. The Company is also eligible to borrow over \$2 million at the Federal Reserve Discount Window if necessary, based on current pledged amounts. The Company manages its liquidity in such a fashion as to be able to meet any unexpected change in levels of assets or liabilities.

The Company's liquidity ratio and average loans to assets ratio were 15% and 74%, respectively, at September 30, 2007, as compared to internal policy guidelines of greater than 10% and less than 78%. The liquidity ratio is calculated with marketable and otherwise liquid assets as the numerator and non-collateralized deposits as the denominator. While these ratios are merely indicators and are not measures of actual liquidity, they are monitored closely and we are focused on maintaining adequate liquidity resources to draw upon should the need arise. Other liquidity ratios reviewed by management and the Board on a regular basis include average net loans to core deposits, net non-core funding dependence, and reliance on wholesale funding, all of which are within policy guidelines.

Table of Contents**CAPITAL RESOURCES**

At September 30, 2007, the Company had total shareholders' equity of \$98.6 million, comprised of \$19.2 million in common stock, \$80.8 million in retained earnings, and negative \$1.4 million in accumulated other comprehensive income. Total shareholders' equity at the end of 2006 was \$90.4 million. The \$8.3 million increase in shareholders' equity during the first nine months of 2007 was due primarily to the addition of net earnings, less \$4.5 million in dividends paid. However, it also includes a \$3.4 million increase related to stock options, and a \$7.0 million decrease due to the impact of shares repurchased and retired by the Company. Another factor is the \$212,000 increase in the difference between the market value and amortized cost of investment securities (net of the tax impact), which increased accumulated other comprehensive income by the same amount.

The Company uses a variety of measures to evaluate its capital adequacy, with risk-based capital ratios calculated separately for the Company and the Bank. Management reviews these capital measurements on a quarterly basis and takes appropriate action to ensure that they are within established internal and external guidelines. The Company and the Bank are both classified as well capitalized, the highest rating of the categories defined under the Bank Holding Company Act and the Federal Deposit Insurance Corporation Improvement Act (FDICIA) of 1991. The FDIC has promulgated risk-based capital guidelines for all state non-member banks such as the Bank. These guidelines establish a risk-adjusted ratio relating capital to different categories of assets and off balance sheet exposures. There are two categories of capital under the guidelines: Tier 1 capital includes common stockholders' equity, qualifying minority interests in consolidated subsidiaries, and qualifying trust-preferred securities (including notes payable to unconsolidated special purpose entities that issue trust-preferred securities), less goodwill and certain other deductions, notably the unrealized net gains or losses (after tax adjustments) on available for sale investment securities carried at fair market value; Tier 2 capital can include qualifying subordinated debt and redeemable preferred stock, qualifying cumulative perpetual preferred stock, and the allowance for loan and lease losses, subject to certain limitations.

As noted previously, the Company's junior subordinated debentures represent borrowings from its unconsolidated subsidiaries. These debentures currently qualify for inclusion as Tier 1 capital for regulatory purposes to the extent that they do not exceed 25% of total Tier 1 capital, but are classified as long-term debt in accordance with generally accepted accounting principles. On March 1, 2005, the Federal Reserve Board adopted a final rule that allows the continued inclusion of trust-preferred securities (and/or related subordinated debentures) in the Tier 1 capital of bank holding companies. However, under the final rule, after a five-year transition period goodwill must be deducted from Tier I capital prior to calculating the 25% limitation. Generally, the amount of junior subordinated debentures in excess of the 25% Tier 1 limitation is included in Tier 2 capital. All of the \$30 million in trust-preferred securities issued by the Company's subsidiaries and outstanding as of September 30, 2007 were included in Tier 1 capital.

The following table sets forth the Company's and the Bank's regulatory capital ratios as of the dates indicated.

Risk Based Ratios

(dollars in thousands, unaudited)

	September 30, 2007	December 31, 2006	Minimum Requirement to be Well Capitalized
Sierra Bancorp			
Total Capital to Total Risk-weighted Assets	13.56%	12.98%	10.00%
Tier 1 Capital to Total Risk-weighted Assets	12.33%	11.77%	6.00%
Tier 1 Leverage Ratio	10.37%	9.92%	5.00%
Bank of the Sierra			
Total Capital to Total Risk-weighted Assets	13.28%	12.49%	10.00%
Tier 1 Capital to Total Risk-weighted Assets	12.05%	11.31%	6.00%
Tier 1 Leverage Ratio	10.13%	9.53%	5.00%

At the current time, there are no commitments that would necessitate the use of material amounts of the Company's capital.

QUALITATIVE & QUANTITATIVE DISCLOSURES

ABOUT MARKET RISK

The information concerning quantitative and qualitative disclosures about market risk is included as part of Part I, Item 2 above. See Management's Discussion and Analysis of Financial Condition and Results of Operations - Liquidity and Market Risk Management .

PART I FINANCIAL INFORMATION

Item 4

CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

The Company's Chief Executive Officer and its Chief Financial Officer, after evaluating the effectiveness of the Company's disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) as of the end of the period covered by this report (the Evaluation Date) have concluded that as of the Evaluation Date, the Company's disclosure controls and procedures were adequate and effective to ensure that material information relating to the Company and its consolidated subsidiaries would be made known to them by others within those entities, particularly during the period in which this quarterly report was being prepared.

Disclosure controls and procedures are designed to ensure that information required to be disclosed by us in the reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported, within the time periods specified in the Securities and Exchange Commission's rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by us in the reports that we file under the Exchange Act is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

Changes in Internal Controls

There were no significant changes in the Company's internal controls over financial reporting that occurred in the third quarter of 2007 that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

Table of Contents**PART II OTHER INFORMATION****ITEM 1: LEGAL PROCEEDINGS**

In the normal course of business, the Company is involved in various legal proceedings. In the opinion of management, any liability resulting from such proceedings would not have a material adverse effect on the Company's financial condition or results of operation.

ITEM 1A: RISK FACTORS

There were no material changes from the risk factors disclosed in the Company's Form 10-K for the fiscal year ended December 31, 2006.

ITEM 2: UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS**(c) Stock Repurchases**

The following table provides information concerning the Company's repurchases of its Common Stock during the third quarter of 2007:

	July	August	September
Total shares purchased	43,700	11,400	6,500
Average per share price	\$ 28.39	\$ 26.69	\$ 28.75
Number of shares purchased as part of publicly announced plan or program	43,700	11,400	6,500
Maximum number of shares remaining for purchase under a plan or program (1)	375,000	363,600	357,100

- (1) The current stock repurchase plan became effective July 1, 2003 and has no expiration date. The repurchase program initially provided that up to 250,000 shares of Sierra Bancorp's common stock could be purchased by the Company from time to time. That amount was supplemented by 250,000 shares on May 19, 2005, another 250,000 shares on March 16, 2006, and an additional 500,000 shares on April 19, 2007.
