**Section 7 Regulation FD**

**Item 7.01. Regulation FD Disclosure.**

On January 14, 2011, Commonwealth Edison Company (ComEd) issued a press release concerning proposed legislation it is developing with other stakeholders that would facilitate the modernization of the Illinois electric grid. A copy of the press release is attached hereto as Exhibit 99.1.

ComEd and other Illinois utilities and legislators are working to develop legislation that would modernize Illinois electric grid. The proposal includes a policy-based approach which would provide a more predictable ratemaking system and would enable utilities to modernize the electric grid and set the stage for fostering economic development while creating and retaining jobs. The current regulatory system has worked well for the past century, but is obsolete in the modern digital economy. Many other states are changing the way they regulate utilities in order to improve the predictability of the ratemaking process.

The proposed legislation would:

provide a vehicle for incremental capital spending for distribution system modernization and improved grid reliability,

adopt a formula rate process, like that used by the Federal Energy Regulatory Commission (FERC) for transmission, that would make timely determinations of actual costs and true-up rates to reflect actual investments,

increase transparency in the ratemaking process, and

maintain the role of the Illinois Commerce Commission (ICC) and provide an ability to review the prudence and reasonableness of costs and rates.

The proposed legislation includes a process for determining formula rates that would provide for the recovery of actual costs of service that are prudently incurred and reasonable in amount, reflect the utility's actual capital structure (excluding goodwill), and include a formula for calculating the return on equity component of the cost of capital.

ComEd has held preliminary discussions with a number of large energy users and other customers, unions, and some policymakers concerning the concept of the proposed legislation, which is expected to be introduced in the Illinois General Assembly before the end of the month. The proposed legislation would apply to electric and gas utilities in Illinois on an opt-in basis. If a utility opts in, the formula rates would replace current rates. The proposed legislation would not provide for any payments to the State of Illinois general fund or have any effect on the Illinois Power Authority (IPA) process for energy procurement.

If the proposed legislation were to be enacted, ComEd would anticipate adopting a formula rate and investing an additional \$2.6 billion in capital expenditures over the next ten years to modernize its distribution system and implement smart grid technology, including improvements to cyber security. These investments would be incremental to ComEd's otherwise planned capital expenditures. However, there can be no assurances that the proposed legislation will be enacted into law or that ComEd will make the anticipated investments.
