Approximate date of proposed public offering: From time to time after the effective date of this Registration Statement.

If any securities being registered on this form will be offered on a delayed or continuous basis in reliance on Rule 415 under the Securities Act of 1933, other than securities offered in connection with a dividend reinvestment plan, check the following box.

It is proposed that this filing will become effective (check appropriate box):

when declared effective pursuant to Section 8(c).

CALCULATION OF REGISTRATION FEE UNDER THE SECURITIES ACT OF 1933

Title of Securities Being Registered	Proposed Maximum Aggregate Offering Price ⁽¹⁾	Amount of Registration Fee ⁽⁷⁾
Common Stock, \$0.01 par value per share ⁽²⁾⁽³⁾		
Preferred Stock, \$0.01 par value per share ⁽²⁾		
Subscription Rights ⁽²⁾		
Debt Securities ⁽⁴⁾		
Warrants ⁽⁵⁾		
Total ⁽⁶⁾	\$1,000,000,000	\$9,337.50

- (1) Estimated pursuant to Rule 457(o) under the Securities Act of 1933, as amended (the Securities Act), solely for the purpose of determining the registration fee. The proposed maximum offering price per security will be determined, from time to time, by Solar Capital Ltd. (the Company or Registrant) in connection with the sale of the securities registered under this Registration Statement.
- (2) Subject to Note 6 below, there is being registered hereunder an indeterminate number of shares of common stock, preferred stock, or subscription rights to purchase shares of our common stock, as may be sold, from time to time.
- (3) Includes such indeterminate number of shares of common stock as may, from time to time, be issued upon conversion or exchange of other securities registered hereunder, to the extent any such securities are, by their terms, convertible or exchangeable for common stock.
- (4) Subject to note 6 below, there is being registered hereunder an indeterminate number of debt securities of the Registrant as may be sold, from time to time. If any debt securities of the Registrant are issued at an original issue discount, then the offering price shall be in such greater principal amount as shall result in an aggregate price to investors not to exceed \$1,000,000,000.
- (5) Subject to note 6 below, there is being registered hereunder an indeterminate number of the Registrant's warrants as may be sold, from time to time, representing rights to purchase common stock, preferred stock or debt securities of the Registrant.
- (6) In no event will the aggregate offering price of all securities issued from time to time pursuant to this Registration Statement exceed \$1,000,000,000.
- (7) Pursuant to Rule 415(a)(6) under the Securities Act, the Registrant is carrying forward to this Registration Statement \$925,000,000 in aggregate offering price of unsold securities that the Registrant previously registered on its registration statement on Form N-2 (File No. 333-194870) initially filed on March 28, 2014 (the Prior Registration Statement). Pursuant to Rule 415(a)(6) under the Securities Act, the filing fee previously paid with respect to such unsold securities will continue to be applied to such unsold securities. The amount of the registration fee in the Calculation of Registration Fee Under the Securities Act of 1933 table relates to the additional \$75,000,000 in aggregate offering price of securities being registered hereunder. As a result, a filing fee of \$9,337.50 is being paid herewith. Pursuant to Rule 415(a)(6) under the Securities Act, the offering of unsold securities under the Prior Registration Statement will be deemed terminated as of the date of effectiveness of this Registration Statement.

The Registrant hereby amends this Registration Statement on such date or dates as may be necessary to delay its effective date until the Registrant shall file a further amendment which specifically states that this Registration Statement shall thereafter become effective in accordance with Section 8(a) of the Securities Act of 1933 or until the Registration Statement shall become effective on such date as the Securities and Exchange Commission, acting pursuant to said Section 8(a), may determine.

Subscription Rights

Warrants

We are an externally managed, non-diversified closed-end management investment company that has elected to be regulated as a business development company under the Investment Company Act of 1940, as amended (the "1940 Act"). Our investment objective is to generate both current income and capital appreciation through debt and equity investments. We invest primarily in leveraged companies, including middle-market companies, in the form of senior secured loans, stretch-senior loans, unitranche loans, mezzanine loans and equity securities. Securities rated below investment grade, including the investments we target, are often referred to as leveraged loans, high yield or junk securities, and may be considered high risk compared to debt instruments that are rated investment grade.

We are managed by Solar Capital Partners, LLC. Solar Capital Management, LLC provides the administrative services necessary for us to operate.

We may offer, from time to time, in one or more offerings or series, up to \$1,000,000,000 of our common stock, preferred stock, debt securities, subscription rights to purchase shares of our common stock, or warrants representing rights to purchase shares of our common stock, preferred stock or debt securities, which we refer to, collectively, as the securities. The preferred stock, debt securities, subscription rights and warrants offered hereby may be convertible or exchangeable into shares of our common stock. The securities may be offered at prices and on terms to be

described in one or more supplements to this prospectus.

In the event we offer common stock, the offering price per share of our common stock less any underwriting commissions or discounts will generally not be less than the net asset value per share of our common stock at the time we make the offering. However, we may issue shares of our common stock pursuant to this prospectus at a price per share that is less than our net asset value per share (a) in connection with a rights offering to our existing stockholders, (b) with the prior approval of the majority (as defined in the 1940 Act) of our common stockholders, or (c) under such other circumstances as the Securities and Exchange Commission (SEC) may permit.

The securities may be offered directly to one or more purchasers, or through agents designated from time to time by us, or to or through underwriters or dealers. The prospectus supplement relating to an offering will identify any agents or underwriters involved in the sale of the securities, and will disclose any applicable purchase price, fee, commission or discount arrangement between us and our agents or underwriters or among our underwriters or the basis upon which such amount may be calculated. See Plan of Distribution. We may not sell any of the securities through agents, underwriters or dealers without delivery of this prospectus and a prospectus supplement describing the method and terms of the offering of such securities.

Our common stock is listed on the NASDAQ Global Select Market under the symbol SLRC. On March 12, 2018, the last reported sales price on the NASDAQ Global Select Market for our common stock was \$21.08 per share.

This prospectus, and the accompanying prospectus supplement, contains important information about us that a prospective investor should know before investing in our common stock. Please read this prospectus, and the accompanying prospectus supplement, before investing, and keep it for future reference. We are required to file annual, quarterly and current reports, proxy statements and other information about us with the Securities and Exchange Commission. This information is available free of charge by contacting us by mail at 500 Park Avenue, New York, NY 10022, by telephone at (212) 993-1670 or on our website at <http://www.solarcapltd.com>. The Securities and Exchange Commission also maintains a website at <http://www.sec.gov> that contains such information. Information contained on our website is not incorporated by reference into this prospectus, and you should not consider that information to be part of this prospectus or the accompanying prospectus supplement.

An investment in our common stock is very risky and highly speculative. Shares of closed-end investment companies, including business development companies, frequently trade at a discount to their net asset value. In addition, the companies in which we invest are subject to special risks. See Risk Factors beginning on page 16 to read about factors you should consider, including the risk of leverage, before investing in our common stock.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined if this prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

This prospectus may not be used to consummate sales of shares of common stock unless accompanied by a prospectus supplement.

Table of Contents

You should rely only on the information contained in this prospectus and the accompanying prospectus supplement. We have not authorized any dealer, salesman or other person to give any information or to make any representation other than those contained in this prospectus or any prospectus supplement to this prospectus. You must not rely upon any information or representation not contained in this prospectus or any such supplements as if we had authorized it. This prospectus and any such supplements do not constitute an offer to sell or a solicitation of any offer to buy any security other than the registered securities to which they relate, nor do they constitute an offer to sell or a solicitation of an offer to buy any securities in any jurisdiction to any person to whom it is unlawful to make such an offer or solicitation in such jurisdiction. The information contained in this prospectus and any such supplements is accurate as of the dates on their covers. Our business, financial condition, results of operations and prospects may have changed since then.

ABOUT THIS PROSPECTUS

This prospectus is part of a registration statement that we have filed with the Securities and Exchange Commission, or SEC, using the shelf registration process. Under the shelf registration process, which constitutes a delayed offering in reliance on Rule 415 under the Securities Act of 1933, as amended, or the Securities Act, we may offer, from time to time, in one or more offerings or series, up to \$1,000,000,000 of our common stock, preferred stock, debt securities, subscription rights to purchase shares of our common stock, or warrants representing rights to purchase shares of our common stock, preferred stock or debt securities, on the terms to be determined at the time of the offering. The securities may be offered at prices and on terms described in one or more supplements to this prospectus. This prospectus provides you with a general description of the securities that we may offer. Each time we use this prospectus to offer securities, we will provide a prospectus supplement that will contain specific information about the terms of that offering. A prospectus supplement may also add, update or change information contained in this prospectus. Please carefully read this prospectus and any such supplements together with any exhibits and the additional information described under Available Information and in the Summary and Risk Factors sections before you make an investment decision.

Table of Contents

SUMMARY

*This summary highlights some of the information in this prospectus. It is not complete and may not contain all of the information that you may want to consider. You should read carefully the more detailed information set forth under **Risk Factors** and the other information included in this prospectus and the documents to which we have referred.*

We were formed in February 2007 as Solar Capital LLC, a Maryland limited liability company, and commenced operations in March 2007, after conducting a private placement of units of membership interest (units), with initial capital of \$1.2 billion of which 47.04% was funded by affiliated parties. On February 9, 2010, Solar Capital LLC was merged with and into Solar Capital Ltd., a Maryland corporation, which we refer to as the Solar Capital Merger, concurrent with the pricing of our initial public offering, leaving Solar Capital Ltd. as the surviving entity. Except where the context suggests otherwise, the terms we, us, our, the Company and Solar Capital refer to Solar Capital LLC prior to the Solar Capital Merger, and Solar Capital Ltd. after the Solar Capital Merger. In addition, the terms Solar Capital Partners or the investment adviser refer to Solar Capital Partners, LLC, and Solar Capital Management or the administrator refers to Solar Capital Management, LLC.

In this prospectus, we use the term leveraged to refer to companies of any size with non-investment grade debt outstanding or, if not explicitly rated, those which we believe would be rated as non-investment grade based on their leverage levels and other terms. In addition, we use the term middle-market to refer to companies with annual revenues between \$50 million and \$1 billion.

Solar Capital

Solar Capital Ltd., a Maryland corporation formed in November 2007, is a closed-end, externally managed, non-diversified management investment company that has elected to be regulated as a business development company (BDC) under the Investment Company Act of 1940, as amended (the 1940 Act). Furthermore, as the Company is an investment company, it continues to apply the guidance in the Financial Accounting Standard Board (FASB) Accounting Standards Codification (ASC) Topic 946. In addition, for U.S. federal income tax purposes, we have elected, and intend to qualify annually, to be treated as a regulated investment company (RIC) under Subchapter M of the Internal Revenue Code of 1986, as amended (the Code).

In February 2010, we completed our initial public offering and concurrent private offering of shares of our common stock to our senior management team.

We invest primarily in privately held U.S. middle-market companies, where we believe the supply of primary capital is limited and the investment opportunities are most attractive. Our investment objective is to generate both current income and capital appreciation through debt and equity investments. We invest primarily in leveraged middle-market companies in the form of senior secured loans, stretch-senior loans, unitranche loans, mezzanine loans and equity securities. From time to time, we may also invest in public companies. Our business is focused primarily on the direct origination of investments through portfolio companies or their financial sponsors. Our investments generally range between \$5 million and \$100 million each, although we expect that this investment size will vary with the size of our capital base and/or strategic initiatives.

In addition, we may invest a portion of our portfolio in other types of investments, which we refer to as opportunistic investments, which are not our primary focus but are intended to enhance our overall returns. These investments may include, but are not limited to, direct investments in public companies that are not thinly traded and securities of leveraged companies located in select countries outside of the United States. The securities that

Table of Contents

we invest in are typically rated below investment grade. Securities rated below investment grade are often referred to as leveraged loans, high yield or junk securities, and may be considered high risk compared to debt instruments that are rated investment grade. In addition, some of our debt investments will not fully amortize during their lifetime, which could result in a loss or a substantial amount of unpaid principal and interest due upon maturity.

Our investment activities are managed by Solar Capital Partners and supervised by our board of directors, a majority of whom are non-interested, as such term is defined in the 1940 Act. Solar Capital Management provides the administrative services necessary for us to operate.

As of December 31, 2017, our investment portfolio totaled \$1.5 billion and our net asset value was \$921.6 million. Our portfolio was comprised of debt and equity investments in 93 portfolio companies.

During the fiscal year ended December 31, 2017, we invested approximately \$472 million in 60 portfolio companies. Investments sold or prepaid during the fiscal year ended December 31, 2017 totaled approximately \$333 million.

Recent Developments

Effective January 1, 2018, the annual rate that Solar Capital Partners charges the Company for the base management fee changed from 2.00% to 1.75%.

About Solar Capital Partners

Solar Capital Partners, our investment adviser, is controlled and led by Michael S. Gross, our Chairman and Chief Executive Officer, and Bruce Spohler, our Chief Operating Officer. They are supported by a team of dedicated investment professionals. Solar Capital Partners' investment team has extensive experience in leveraged lending and private equity, as well as significant contacts with financial sponsors.

In addition, Solar Capital Partners serves as investment adviser to Solar Senior Capital Ltd., or Solar Senior, a publicly traded BDC that invests in the senior debt securities of leveraged middle-market companies similar to those we target for investment. Through December 31, 2017, investment team led by Messrs. Gross and Spohler has invested approximately \$7 billion in more than 320 different portfolio companies involving an aggregate of more than 185 different financial sponsors. Since Solar Capital's inception, these investment professionals have used their relationships in the middle-market financial sponsor and financial intermediary community to generate deal flow. As of March 12, 2018, Mr. Gross and Mr. Spohler beneficially owned, either directly or indirectly, approximately 5.7% and 5.2%, respectively, of our outstanding common stock.

Mr. Gross has over 25 years of experience in the private equity, distressed debt and mezzanine lending businesses and has been involved in originating, structuring, negotiating, consummating and managing private equity, distressed debt and mezzanine (i.e., actually or structurally subordinated) lending transactions. We also rely on the over 25 years of experience of Mr. Spohler, who has served as our Chief Operating Officer and a partner of Solar Capital Partners since its inception.

Solar Capital Partners' senior investment professionals have been active participants in the primary and secondary leveraged credit markets throughout their careers. They have effectively managed portfolios of distressed and mezzanine (i.e., actually or structurally subordinated) debt as well as other investment types. The depth of their prior experience and credit market expertise has led them through various stages of the economic cycle as well as several market disruptions.

Table of Contents

Market Opportunity

Solar Capital invests primarily in senior secured loans, stretch-senior loans, unitranche loans, mezzanine loans and equity securities of middle-market leveraged companies. We believe that the size of this market, coupled with leveraged companies' need for flexible sources of capital at attractive terms and rates, creates an attractive investment environment for us. See **Business** **Market Opportunity**.

Middle-market companies have faced increasing difficulty in accessing the capital markets. While many middle-market companies were formerly able to raise funds by issuing high-yield bonds, we believe this approach to financing has become more difficult in recent years as institutional investors have sought to invest in larger, more liquid offerings. In addition, many private finance companies that historically financed their lending and investing activities through securitization transactions have lost that source of funding and reduced lending significantly. Moreover, consolidation of lenders and market participants and the illiquid nature of investments have resulted in fewer middle-market lenders and market participants.

There is a large pool of uninvested private equity capital likely to seek additional capital to support their investments. We believe there is more than \$500 billion of uninvested private equity capital seeking debt financing to support acquisitions. We expect that middle-market private equity firms will continue to invest the approximately \$185 billion raised since 2000 in middle-market companies and that those private equity firms will seek to support their investments with mezzanine loans from sources such as Solar Capital.

The significant amount of debt maturing through 2018 should provide additional demand for capital. A high volume of financings were completed between the years 2004 and 2007, which are expected to mature over the next few years. We believe that this supply of prospective lending opportunities coupled with a lack of available credit in the middle-market lending space may offer attractive risk-adjusted returns to investors. Risk-adjusted return compares returns against the amount of risk incurred. The term **risk-adjusted return** does not imply that an investment is no risk or low risk.

Investing in private middle-market debt provides an attractive risk reward profile. In general, terms for illiquid, middle-market subordinated debt have been more attractive than those for larger corporations which are typically more liquid. We believe this is because fewer institutions are able to invest in illiquid asset classes.

Therefore, we believe that there is an attractive opportunity to invest in senior secured loans, stretch-senior loans, unitranche loans, mezzanine loans and equity securities of leveraged companies, and that we are well positioned to serve this market.

Competitive Advantages and Strategy

We believe that we have the following competitive advantages over other providers of financing to leveraged companies. See **Business** **Competitive Advantages and Strategy**.

Management Expertise

As managing partner, Mr. Gross has principal management responsibility for Solar Capital Partners, to which he currently dedicates substantially all of his time. Mr. Gross has over 25 years of experience in leveraged finance, private equity and distressed debt investing. Mr. Spohler, our Chief Operating Officer and a partner of Solar Capital Partners, has over 25 years of experience in evaluating and executing leverage finance transactions.

Investment Capacity

The proceeds from our initial public offering and the Concurrent Private Placement, the borrowing capacity under the senior secured credit facility led by Citibank, N.A. (the Credit Facility), our \$75 million of unsecured

Table of Contents

senior notes due 2023 (the 2023 Unsecured Notes), our \$150 million of unsecured senior notes due 2022 (the 2022 Unsecured Notes) and \$21 million of unsecured senior notes due 2022 (the 2022 Tranche C Notes) and the expected repayments of existing investments provide us with a substantial amount of capital available for deployment into new investment opportunities. We believe we are well positioned for the current marketplace.

Solar Capital's Limited Leverage

As of December 31, 2017, we had total outstanding borrowings of approximately \$541.6 million. Under the provisions of the 1940 Act, we are permitted to issue senior securities in amounts such that our asset coverage ratio, as defined in the 1940 Act, equals at least 200% of gross assets less all liabilities and indebtedness not represented by senior securities, after each issuance of senior securities. As of December 31, 2017, our asset coverage ratio was 270.2%. We believe our relatively low level of leverage provides us with a competitive advantage, allowing us to anticipate providing a consistent distribution to our investors, as proceeds from our investments are available for reinvestment as opposed to being consumed by debt repayment. We may increase our relative level of debt in the future. However, we do not currently anticipate operating with a substantial amount of debt relative to our total assets.

Proprietary Sourcing and Origination

We believe that Solar Capital Partners' senior investment professionals' longstanding relationships with financial sponsors, commercial and investment banks, management teams and other financial intermediaries provide us with a strong pipeline of proprietary origination opportunities. We expect to continue leveraging the relationships Mr. Gross established while sourcing and originating investments at Apollo Investment Corporation (Apollo) as well as the financial sponsor relationships Mr. Spohler developed while he was a co-head of CIBC World Markets U.S. Leveraged Finance Group.

Since its inception, Solar Capital Partners has sourced investments in more than 320 different portfolio companies involving an aggregate of more than 185 different financial sponsors, through December 31, 2017.

Versatile Transaction Structuring and Flexibility of Capital

We believe Solar Capital Partners' senior investment team's broad expertise and ability to draw upon its extensive experience enable us to identify, assess and structure investments successfully across all levels of a company's capital structure and to manage potential risk and return at all stages of the economic cycle. The attempt to manage risk does not imply low risk or no risk. While we are subject to significant regulation as a BDC, we are not subject to many of the regulatory limitations that govern traditional lending institutions such as banks. As a result, we believe that we can be more flexible than such lending institutions in selecting and structuring investments, adjusting investment criteria, transaction structures and, in some cases, the types of securities in which we invest.

Emphasis on Achieving Strong Risk-Adjusted Returns

Solar Capital Partners uses a structured investment and risk management process that emphasizes research and analysis. Solar Capital Partners seeks to build our portfolio on a bottom-up basis, choosing and sizing individual positions based on their relative risk/reward profiles as a function of the associated downside risk, volatility, correlation with the existing portfolio and liquidity. At the same time, Solar Capital Partners takes into consideration a variety of factors in managing our portfolio and imposes portfolio-based risk constraints promoting a more diverse portfolio of investments and limiting issuer and industry concentration. We do not pursue short-term origination targets. We believe this approach enables us to build an attractive investment portfolio that meets our return and value criteria over the long term. We believe it is critical to conduct extensive due diligence on investment targets. In

evaluating new investments we, through Solar Capital Partners, conduct a rigorous due diligence process.

Table of Contents

Deep Industry Focus with Substantial Information Flow

We concentrate our investing activities in industries characterized by strong cash flow and in which Solar Capital Partners' investment professionals have deep investment experience. As a result of their investment experience, Messrs. Gross and Spohler, together with Solar Capital Partners' other senior investment professionals, have long-term relationships with management consultants and management teams in the industries we target, as well as substantial information concerning those industries.

Longer Investment Horizon

Unlike private equity and venture capital funds, we will not be subject to standard periodic capital return requirements. Such requirements typically stipulate that the capital of these funds, together with any capital gains on such invested funds, can only be invested once and must be returned to investors after a pre-agreed time period. We believe that our flexibility to make investments with a long-term view and without the capital return requirements of traditional private investment vehicles provides us with the opportunity to generate favorable returns relative to the risks of our invested capital and enables us to be a better long-term partner for our portfolio companies.

Summary Risk Factors

The value of our assets, as well as the market price of shares of our common stock, will fluctuate. Our investments may be risky, and you may lose all or part of your investment in us. Investing in Solar Capital involves other risks, including the following:

We operate in a highly competitive market for investment opportunities;

Our investments are very risky and highly speculative;

The lack of liquidity in our investments may make it difficult for us to dispose of our investments at a favorable price, which may adversely affect our ability to meet our investment objectives;

Our portfolio may be concentrated in a limited number of portfolio companies and industries, which will subject us to a risk of significant loss if any of these companies performs poorly or defaults on its obligations under any of its debt instruments or if there is a downturn in a particular industry;

Our investments in securities rated below investment grade are speculative in nature and are subject to additional risk factors such as increased possibility of default, illiquidity of the security, and changes in value based on changes in interest rates;

A disruption in the global and U.S. capital markets and the credit markets could impair our ability to raise money and negatively affect our business and harm our operating results;

Edgar Filing: Solar Capital Ltd. - Form N-2

Our shares may trade at a substantial discount from net asset value and may continue to do so over the long term;

Our common stock price may be volatile and may decrease substantially;

There is a risk that our stockholders may not receive distributions or that our distributions may not grow over time;

Sales of substantial amounts of our common stock in the public market may have an adverse effect on the market price of our common stock;

The net asset value per share of our common stock may be diluted if we issue or sell shares of our common stock at prices below the then current net asset value per share of our common stock or securities to subscribe for or convertible into shares of our common stock;

Table of Contents

To the extent we use debt or preferred stock to finance our investments, changes in interest rates will affect our cost of capital and net investment income;

We are dependent upon Solar Capital Partners' key personnel for our future success;

Our financial condition and results of operations will depend on our ability to manage future growth effectively;

Regulations governing our operation as a BDC affect our ability to, and the way in which we will, raise additional capital. As a BDC, the necessity of raising additional capital may expose us to risks, including the typical risks associated with leverage.

We have and will continue to borrow money, which would magnify the potential for loss on amounts invested and may increase the risk of investing in us;

Our quarterly and annual operating results are subject to fluctuation as a result of the nature of our business, and if we fail to achieve our investment objective, the net asset value of our common stock may decline;

There will be uncertainty as to the value of our portfolio investments, which may impact our net asset value;

There are significant potential conflicts of interest, including Solar Capital Partners' management of Solar Senior, which could impact our investment returns, and an investment in Solar Capital is not an investment in Solar Senior;

We may become subject to corporate-level U.S. federal income tax if we are unable to qualify and maintain our qualification for tax treatment as a RIC under Subchapter M of the Code;

The failure in cyber security systems, as well as the occurrence of events unanticipated in our disaster recovery systems and management continuity planning could impair our ability to conduct business effectively; and

We cannot predict how tax reform legislation will affect us, our investments, or our stockholders, and any such legislation could adversely affect our business.

See "Risk Factors" beginning on page 16 and the other information included in this prospectus, for additional discussion of factors you should carefully consider before deciding to invest in our securities.

Operating and Regulatory Structure

Immediately prior to the pricing of our initial public offering, Solar Capital LLC was merged with and into Solar Capital Ltd., a Maryland corporation that is an externally managed, non-diversified closed-end management investment company which has elected to be treated as a BDC under the 1940 Act. As a BDC, we are required to meet regulatory tests, including the requirement to invest at least 70% of our total assets in qualifying assets. Qualifying assets generally include, among other things, securities of eligible portfolio companies. Eligible portfolio companies generally include U.S. companies that are not investment companies and that do not have securities listed on a national exchange. See Regulation as a Business Development Company. We may also borrow funds to make investments. In addition, we have elected, and intend to qualify annually, to be treated for U.S. federal income tax purposes as a RIC under Subchapter M of the Code. See Certain U.S. Federal Income Tax Considerations.

Our investment activities are managed by Solar Capital Partners and supervised by our board of directors. Solar Capital Partners is an investment adviser that is registered under the Investment Advisers Act of 1940, as

Table of Contents

amended (the Advisers Act). Under our investment advisory and management agreement, (the Investment Advisory and Management Agreement), we have agreed to pay Solar Capital Partners an annual base management fee based on our gross assets as well as an incentive fee based on our performance. See Investment Advisory and Management Agreement. We have also entered into an administration agreement, (the Administration Agreement), under which we have agreed to reimburse Solar Capital Management for the allocable portion of overhead and other expenses incurred by Solar Capital Management in performing its obligations under the Administration Agreement, including furnishing us with office facilities, equipment and clerical, bookkeeping and record keeping services at such facilities, as well as providing us with other administrative services. See Administration Agreement.

Our Corporate Information

Our offices are located at 500 Park Avenue, New York, New York 10022, and our telephone number is (212) 993-1670.

Table of Contents

Offerings

We may offer, from time to time, in one or more offerings or series, up to \$1,000,000,000 of our common stock, preferred stock, debt securities, subscription rights to purchase shares of our common stock, or warrants representing rights to purchase shares of our common stock, preferred stock or debt securities, on terms to be determined at the time of the offering. We will offer our securities at prices and on terms to be set forth in one or more supplements to this prospectus. The offering price per share of our common stock, less any underwriting commissions or discounts, generally will not be less than the net asset value per share of our common stock at the time of an offering. However, we may issue shares of our common stock pursuant to this prospectus at a price per share that is less than our net asset value per share (a) in connection with a rights offering to our existing stockholders, (b) with the prior approval of the majority (as defined in the 1940 Act) of our common stockholders, or (c) under such other circumstances as the SEC may permit.

At our 2017 Annual Stockholders Meeting, our stockholders approved our ability to sell or otherwise issue shares of our common stock, not exceeding 25% of our then outstanding common stock immediately prior to each such offering, at a price or prices below the then current net asset value per share, in each case subject to the approval of our board of directors and compliance with the conditions set forth in the proxy statement pertaining thereto, during a period beginning on May 17, 2017 and expiring on the earlier of the one-year anniversary of the date of the 2017 Annual Stockholders Meeting and the date of our 2018 Annual Stockholders Meeting, which is expected to be held in May 2018. However, notwithstanding such stockholder approval, since our IPO on February 9, 2010, we have not sold any shares of our common stock in an offering that resulted in proceeds to us of less than our then current net asset value per share. Any offering of our common stock that requires stockholder approval must occur, if at all, within one year after receiving such stockholder approval. However, any such issuance of shares of our common stock below net asset value will be dilutive to the net asset value of our common stock. See Risk Factors Risks Relating to an Investment in Our Securities and Sale of Common Stock Below Net Asset Value.

The securities may be offered directly to one or more purchasers, including existing stockholders in a rights offering, through agents designated from time to time by us, or to or through underwriters or dealers. The prospectus supplement relating to an offering will identify any agents or underwriters involved in the sale of the securities, and will disclose any applicable purchase price, fee, commission or discount arrangement between us and our agents or underwriters or among our underwriters or the basis upon which such amount may be calculated. See Plan of Distribution. We may not sell any of the securities through agents, underwriters or dealers without delivery of this prospectus and a prospectus supplement describing the method and terms of the offering of such securities.

Set forth below is additional information regarding offerings of our common stock:

Use of Proceeds

Unless otherwise specified in a prospectus supplement, we intend to use the net proceeds from the sale of our securities for general corporate purposes, which includes, among other things, (a) investing in portfolio companies in accordance with our investment objective and strategies and market conditions and (b) repaying indebtedness. Each supplement to this prospectus relating to an offering will more fully identify the use of the proceeds from such offering. See Use of Proceeds.

NASDAQ Global Select Market Symbol SLRC

Distributions

To the extent that we have income available, we intend to distribute quarterly distributions to our stockholders. The amount of our distributions, if any, will be determined by our board of directors. Any distributions to our stockholders will be declared out of assets legally available for distribution. The specific tax characteristics of our distributions will be reported to shareholders after the end of each

Table of Contents

calendar year. We may issue preferred stock from time to time, although we have no immediate intention to do so. If we issue shares of preferred stock, holders of such preferred stock will be entitled to receive cash distributions at an annual rate that will be fixed or will vary for the successive distribution periods for each series. In general, the distribution periods for fixed rate preferred stock will be quarterly.

Taxation

We have elected to be treated for U.S. federal income tax purposes, and intend to continue to qualify annually, as a RIC under Subchapter M of the Code. As a RIC, we generally will not have to pay U.S. corporate-level federal income taxes on any ordinary income or capital gains that we distribute to our stockholders as dividends. To continue to maintain our RIC tax treatment, we must meet specified source-of-income and asset diversification requirements and distribute annually at least 90% of our ordinary income and realized net short-term capital gains in excess of realized net long-term capital losses, if any. See Plan of Distribution and Certain U.S. Federal Income Tax Considerations in this prospectus.

Leverage

We have historically and will in the future borrow funds to make investments. As a result, we will be exposed to the risks of leverage, which may be considered a speculative investment technique. The use of leverage magnifies the potential for loss on amounts invested and therefore increases the risks associated with investing in our securities. In addition, the costs associated with our borrowings, including any increase in the management fee payable to our investment adviser, Solar Capital Partners, will be borne by our common stockholders.

Investment Advisory Fees

We pay Solar Capital Partners a fee for its services under the Investment Advisory and Management Agreement consisting of two components—a base management fee and an incentive fee. The base management fee is calculated at an annual rate of 1.75% of our gross assets, which includes any borrowings for investment purposes. Effective January 1, 2018, the annual rate for the base management fee changed from 2.00% to 1.75%. The incentive fee consists of two parts. The first part is calculated and payable quarterly in arrears and equals 20% of our pre-incentive fee net investment income for the immediately preceding quarter, subject to a preferred return, or hurdle, and a catch up feature. The second part is determined and payable in arrears as of the end of each calendar year (or upon termination of the Investment Advisory and Management Agreement) in an amount equal to 20% of our realized capital gains, if any, on a cumulative basis from inception through the end of each calendar year, computed net of all realized capital losses and unrealized capital depreciation on a cumulative basis, less the aggregate amount of any previously paid capital gain incentive fees. See Investment Advisory

and Management Agreement in this prospectus.

Administration Agreement

We reimburse Solar Capital Management for the allocable portion of overhead and other expenses incurred by Solar Capital Management in performing its obligations under the Administration Agreement,

Table of Contents

including furnishing us with office facilities, equipment and clerical, bookkeeping and record keeping services at such facilities, as well as providing us with other administrative services. In addition, we reimburse Solar Capital Management for the fees and expenses associated with performing compliance functions, and our allocable portion of the compensation of our chief compliance officer and our chief financial officer and their respective staffs. See Administration Agreement in this prospectus.

Trading

Shares of closed-end investment companies frequently trade at a discount to their net asset value. The risk that our shares may trade at a discount to our net asset value is separate and distinct from the risk that our net asset value per share may decline. We cannot predict whether our shares will trade above, at or below net asset value.

License Agreement

We have entered into a license agreement with Solar Capital Partners, pursuant to which Solar Capital Partners has agreed to grant us a non-exclusive license to use the name Solar Capital. See License Agreement in this prospectus.

Dividend Reinvestment Plan

We have adopted an opt out dividend reinvestment plan. If your shares of common stock are registered in your own name, your distributions will automatically be reinvested under our dividend reinvestment plan in additional whole and fractional shares of common stock, unless you opt out of our dividend reinvestment plan so as to receive cash dividends by delivering a written notice to our plan administrator. If your shares are held in the name of a broker or other nominee, you should contact the broker or nominee for details regarding opting out of our dividend reinvestment plan. Stockholders who receive distributions in the form of stock will be subject to the same federal, state and local tax consequences as stockholders who elect to receive their distributions in cash. See Dividend Reinvestment Plan in this prospectus.

Certain Anti-Takeover Measures

Our charter and bylaws, as well as certain statutory and regulatory requirements, contain certain provisions that may have the effect of discouraging a third party from making an acquisition proposal for us. These anti-takeover provisions may inhibit a change in control in circumstances that could give the holders of our common stock the opportunity to realize a premium over the market price for our common stock. See Description of Our Capital Stock in this prospectus.

Available Information

We are required to file periodic reports, current reports, proxy statements and other information with the SEC. This information is available at the

Edgar Filing: Solar Capital Ltd. - Form N-2

SEC's public reference room at 100 F Street, NE, Washington, D.C. 20549 and on the SEC's website at <http://www.sec.gov>. The public may obtain information on the operation of the SEC's public reference room by calling the SEC at 1-800-SEC-0330. This information is also available free of charge by contacting us at Solar Capital Ltd., 500 Park Avenue, New York, NY 10022, by telephone at (212) 993-1670 or on our website at <http://www.solarcapltd.com>.

Table of Contents**FEES AND EXPENSES**

The following table is intended to assist you in understanding the costs and expenses that you will bear directly or indirectly. We caution you that some of the percentages indicated in the table below are estimates and may vary. Except where the context suggests otherwise, whenever this prospectus contains a reference to fees or expenses paid by us or Solar Capital, or that we will pay fees or expenses, you will indirectly bear such fees or expenses as an investor in Solar Capital Ltd.

Stockholder transaction expenses:

Sales load (as a percentage of offering price)	0%
Offering expenses (as a percentage of offering price)	0%
Dividend reinvestment plan expenses	0%

Total stockholder transaction expenses (as a percentage of offering price)	0%
--	---------------

Annual expenses (as a percentage of net assets attributable to common stock)⁽⁴⁾:

Base management fee	2.60% ⁽⁵⁾
Incentive fees payable under our Investment Advisory and Management Agreement (up to 20%)	1.93% ⁽⁶⁾
Interest payments on borrowed funds	2.35% ⁽⁷⁾
Acquired fund fees and expenses	0.61% ⁽⁸⁾
Other expenses (estimated)	0.96% ⁽⁹⁾

Total annual expenses	8.45%
-----------------------	-------

Example

The following example demonstrates the projected dollar amount of total cumulative expenses that would be incurred over various periods with respect to a hypothetical investment in our common stock. In calculating the following expense amounts, we have assumed that our annual operating expenses would remain at the levels set forth in the table above and have excluded performance-based incentive fees. See Note 7 below for additional information regarding certain assumptions regarding our level of leverage. In the event that shares to which this prospectus relates are sold to or through underwriters, a corresponding prospectus supplement will restate this example to reflect the applicable sales load.

	1 Year	3 Years	5 Years	10 Years
You would pay the following expenses on a \$1,000 investment, assuming a 5% annual return	\$ 65	\$ 193	\$ 316	\$ 609

- (1) In the event that the shares of common stock to which this prospectus relates are sold to or through underwriters, a corresponding prospectus supplement will disclose the applicable sales load and the Example will be updated accordingly.
- (2) The prospectus supplement corresponding to each offering will disclose the applicable offering expenses and total stockholder transaction expenses.
- (3) The expenses of the dividend reinvestment plan are included in other expenses.

- (4) Annual Expenses are presented in this manner because common shareholders will bear all costs of running the Company.
- (5) Effective January 1, 2018, the annual rate that Solar Capital Partners charges the Company for the base management fee changed from 2.00% to 1.75%. Our 1.75% base management fee under the Investment Advisory and Management Agreement is based on our gross assets, which is defined as all the assets of Solar Capital, excluding temporary assets, including those acquired using borrowings for investment purposes, and assumes our gross assets remain consistent with gross assets for the fiscal year ended December 31, 2017. See Investment Advisory and Management Agreement.

Table of Contents

(6) Assumes that annual incentive fees earned by our investment adviser, Solar Capital Partners, remain consistent with the incentive fees earned by Solar Capital Partners for the fiscal year ended December 31, 2017, adjusted for the reduction in the base management fee to 1.75%. The incentive fee consists of two parts:

The first part, which is payable quarterly in arrears, equals 20% of the excess, if any, of our Pre-Incentive Fee Net Investment Income that exceeds a 1.75% quarterly (7.00% annualized) hurdle rate, which we refer to as the Hurdle, subject to a catch-up provision measured at the end of each calendar quarter. The first part of the incentive fee is computed and paid on income that may include interest that is accrued but not yet received in cash. The operation of the first part of the incentive fee for each quarter is as follows:

no incentive fee is payable to our investment adviser in any calendar quarter in which our Pre-Incentive Fee Net Investment Income does not exceed the Hurdle of 1.75%;

100% of our Pre-Incentive Fee Net Investment Income with respect to that portion of such Pre-Incentive Fee Net Investment Income, if any, that exceeds the Hurdle but is less than 2.1875% in any calendar quarter (8.75% annualized) is payable to our investment adviser. We refer to this portion of our Pre-Incentive Fee Net Investment Income (which exceeds the Hurdle but is less than 2.1875%) as the catch-up. The catch-up is meant to provide our investment adviser with 20% of our Pre-Incentive Fee Net Investment Income, as if a Hurdle did not apply when our Pre-Incentive Fee Net Investment Income exceeds 2.1875% in any calendar quarter; and

20% of the amount of our Pre-Incentive Fee Net Investment Income, if any, that exceeds 2.1875% in any calendar quarter (8.75% annualized) is payable to our investment adviser (once the Hurdle is reached and the catch-up is achieved, 20% of all Pre-Incentive Fee Investment Income thereafter is allocated to our investment adviser).

The second part of the incentive fee equals 20% of our Incentive Fee Capital Gains, if any, which equals our realized capital gains on a cumulative basis from inception through the end of each calendar year, computed net of all realized capital losses and unrealized capital depreciation on a cumulative basis, less the aggregate amount of any previously paid capital gain incentive fees. The second part of the incentive fee is payable, in arrears, at the end of each calendar year (or upon termination of the Investment Advisory and Management Agreement, as of the termination date). For a more detailed discussion of the calculation of this fee, see Investment Advisory and Management Agreement.

(7) We have historically and will in the future borrow funds from time to time to make investments to the extent we determine that the economic situation is conducive to doing so. The costs associated with our outstanding borrowings are indirectly born by our investors. For purposes of this section, we have computed interest expense using the average balance outstanding for all borrowings during the fiscal year ended December 31, 2017. We used the London Interbank Offered Rate (LIBOR) rate on December 31, 2017 and the interest rate on the Credit Facility, the 2023 Unsecured Notes, the 2022 Unsecured Notes and the 2022 Tranche C Notes on December 31, 2017. We have also included the estimated amortization of fees incurred in establishing the Credit Facility, the 2023 Unsecured Notes, the 2022 Unsecured Notes and the 2022 Tranche C Notes as of December 31, 2017. Additionally, we included the estimated cost of commitment fees for unused balances on the Credit Facility. As of December 31, 2017, we had \$295.6 million outstanding under the Credit Facility, and we had \$75 million, \$150 million and \$21 million outstanding under the 2023 Unsecured Notes, the 2022 Unsecured Notes and the

2022 Tranche C Notes, respectively. We may also issue preferred stock, subject to our compliance with applicable requirements under the 1940 Act.

- (8) The holders of shares of our common stock indirectly bear the expenses of our investments in Senior Secured Unitranche Loan Program LLC (SSLP) and Senior Secured Unitranche Loan Program II LLC (SSLP II). No management fee is charged on our investments in SSLP and SSLP II in connection with the administrative services provided to SSLP and SSLP II. Future expenses for SSLP and SSLP II may be substantially higher or lower because certain expenses may fluctuate over time.

Table of Contents

- (9) Other expenses are based on estimated amounts for the current fiscal year, which considers the amounts incurred for the fiscal year ended December 31, 2017 and include our overhead expenses, including payments under our Administration Agreement based on our allocable portion of overhead and other expenses incurred by Solar Capital Management in performing its obligations under the Administration Agreement. See Administration Agreement.

The example and the expenses in the tables above should not be considered a representation of our future expenses, and actual expenses may be greater or less than those shown. While the example assumes, as required by the SEC, a 5% annual return, our performance will vary and may result in a return greater or less than 5%. The incentive fee under the Investment Advisory and Management Agreement, which, assuming a 5% annual return, would either not be payable or would have an insignificant impact on the expense amounts shown above, is not included in the example. This illustration assumes that we will not realize any capital gains (computed net of all realized capital losses and unrealized capital depreciation) in any of the indicated time periods. If we achieve sufficient returns on our investments, including through the realization of capital gains, to trigger an incentive fee of a material amount, our expenses and returns to our investors would be higher. For example, if we assumed that we received our 5% annual return completely in the form of net realized capital gains on our investments, computed net of all cumulative unrealized depreciation on our investments, the projected dollar amount of total cumulative expenses set forth in the above illustration would be as follows:

	1 Year	3 Years	5 Years	10 Years
You would pay the following expenses on a \$1,000 investment, assuming a 5% annual return	\$ 75	\$ 220	\$ 358	\$ 672

In addition, the example assumes no sales load. Also, while the example assumes reinvestment of all distributions at net asset value, participants in our dividend reinvestment plan will receive a number of shares of our common stock, determined by dividing the total dollar amount of the distribution payable to a participant by the market price per share of our common stock at the close of trading on the distribution payment date, which may be at, above or below net asset value unless the company makes open market purchases and the shares received will be determined based on the average price paid by our agent, plus commissions. See Dividend Reinvestment Plan for additional information regarding our dividend reinvestment plan.

Table of Contents**SELECTED FINANCIAL AND OTHER DATA**

The selected financial and other data below should be read in conjunction with our Management's Discussion and Analysis of Financial Condition and Results of Operations and the consolidated financial statements and notes thereto. Financial information is presented for the fiscal years ended December 31, 2017, 2016, 2015, 2014 and 2013. Financial information for the periods ending December 31, 2017, 2016, 2015, 2014, and 2013 has been derived from our consolidated financial statements that were audited by KPMG LLP (KPMG), an independent registered public accounting firm. See Management's Discussion and Analysis of Financial Condition and Results of Operations and Senior Securities below for more information.

Table of Contents

RISK FACTORS

Before you invest in our securities, you should be aware of various risks, including those described below. You should carefully consider these risk factors, together with all of the other information included in this prospectus, before you decide whether to make an investment in our securities. The risks set out below are not the only risks we face. If any of the following events occur, our business, financial condition and results of operations could be materially adversely affected. In such case, our net asset value and the trading price of our common stock could decline or the value of our preferred stock, debt securities, subscription rights or warrants may decline, and you may lose all or part of your investment.

Risks Related to Our Investments

We operate in a highly competitive market for investment opportunities.

A number of entities compete with us to make the types of investments that we target in leveraged companies. We compete with other BDCs, public and private funds, commercial and investment banks, commercial financing companies and, to the extent they provide an alternative form of financing, private equity funds. Many of our competitors are substantially larger and have considerably greater financial, technical and marketing resources than we do. For example, some competitors may have a lower cost of funds and access to funding sources that are not available to us. In addition, some of our competitors may have higher risk tolerances or different risk assessments than we have, which could allow them to consider a wider variety of investments and establish more relationships and offer better pricing and a more flexible structure than we are able to do. Furthermore, many of our potential competitors are not subject to the regulatory restrictions that the 1940 Act imposes on us as a BDC. If we are unable to source attractive investments, we may hold a greater percentage of our assets in cash and cash equivalents than anticipated, which could impact potential returns on our portfolio. We cannot assure you that the competitive pressures we face will not have a material adverse effect on our business, financial condition and results of operations. Also, as a result of this competition, we may not be able to take advantage of attractive investment opportunities from time to time, and we can offer no assurance that we will be able to identify and make investments that are consistent with our investment objective.

Participants in our industry compete on several factors, including price, flexibility in transaction structure, customer service, reputation, market knowledge and speed in decision-making. We do not seek to compete primarily based on the interest rates we will offer, and we believe that some of our competitors may make loans with interest rates that will be comparable to or lower than the rates we offer. We may lose investment opportunities if we do not match our competitors' pricing, terms and structure. However, if we match our competitors' pricing, terms and structure, we may experience decreased net interest income and increased risk of credit loss.

Our investments are very risky and highly speculative.

We invest primarily in senior secured term loans, stretch-senior loans unitranche loans, mezzanine loans and preferred securities, and select equity investments issued by leveraged companies.

Senior Secured Loans. When we make a senior secured term loan investment, including stretch-senior and unitranche loan investments, in a portfolio company, we generally take a security interest in the available assets of the portfolio company, including the equity interests of its subsidiaries, which we expect to help mitigate the risk that we will not be repaid. However, there is a risk that the collateral securing our loans may decrease in value over time, may be difficult to sell in a timely manner, may be difficult to appraise and may fluctuate in value based upon the success of the business and market conditions, including as a result of the inability of the portfolio company to raise additional

capital, and, in some circumstances, our lien could be subordinated to claims of other creditors. In addition, deterioration in a portfolio company's financial condition and prospects, including its inability to raise additional capital, may be accompanied by deterioration in the value of the collateral for the loan. Consequently, the fact that a loan is secured does not guarantee that we will receive principal and interest payments according to the loan's terms, or at all, or that we will be able to collect on the loan should we be forced to enforce our remedies.

Table of Contents

Mezzanine Loans and Preferred Securities. Our mezzanine and preferred investments are generally subordinated to senior loans and are generally unsecured. As such, other creditors may rank senior to us in the event of an insolvency. This may result in an above average amount of risk and loss of principal.

Equity Investments. When we invest in senior secured loans, stretch-senior loans, unitranche loans, mezzanine loans or preferred securities, we may acquire common equity securities as well. In addition, we may invest directly in the equity securities of portfolio companies. Our goal is ultimately to exit such equity interests and realize gains upon our disposition of such interests. However, the equity interests we receive may not appreciate in value and, in fact, may decline in value. Accordingly, we may not be able to realize gains from our equity interests, and any gains that we do realize on the disposition of any equity interests may not be sufficient to offset any other losses we experience.

In addition, investing in middle-market companies involves a number of significant risks, including:

these companies may have limited financial resources and may be unable to meet their obligations under their debt securities that we hold, which may be accompanied by a deterioration in the value of any collateral and a reduction in the likelihood of us realizing any guarantees we may have obtained in connection with our investment;

they typically have shorter operating histories, narrower product lines and smaller market shares than larger businesses, which tend to render them more vulnerable to competitors' actions and market conditions, as well as general economic downturns;

they are more likely to depend on the management talents and efforts of a small group of persons; therefore, the death, disability, resignation or termination of one or more of these persons could have a material adverse impact on our portfolio company and, in turn, on us;

they generally have less predictable operating results, may from time to time be parties to litigation, may be engaged in rapidly changing businesses with products subject to a substantial risk of obsolescence, and may require substantial additional capital to support their operations, finance expansion or maintain their competitive position. In addition, our executive officers, directors and our investment adviser may, in the ordinary course of business, be named as defendants in litigation arising from our investments in the portfolio companies; and

they may have difficulty accessing the capital markets to meet future capital needs, which may limit their ability to grow or to repay their outstanding indebtedness upon maturity.

The lack of liquidity in our investments may make it difficult for us to dispose of our investments at a favorable price, which may adversely affect our ability to meet our investment objectives.

We generally make investments in private companies. We invest and expect to continue investing in companies whose securities have no established trading market and whose securities are and will be subject to legal and other restrictions on resale or whose securities are and will be less liquid than are publicly-traded securities. Investments purchased by us that are liquid at the time of purchase may subsequently become illiquid due to events relating to the

issuer of the investments, market events, economic conditions or investor perceptions. The illiquidity of our investments may make it difficult for us to sell such investments if the need arises. In addition, if we are required to liquidate all or a portion of our portfolio quickly, we may realize significantly less than the value at which we have previously recorded our investments. As a result, we do not expect to achieve liquidity in our investments in the near-term. However, to maintain our qualification as a BDC and as a RIC, we may have to dispose of investments if we do not satisfy one or more of the applicable criteria under the respective regulatory frameworks. Domestic and foreign markets are complex and interrelated, so that events in one sector of the world markets or economy, or in one geographical region, can reverberate and have materially negative consequences for other markets, economic or regional sectors in a manner that may not be foreseen and which may negatively impact the liquidity of our investments and materially harm our business. In addition, we may face other restrictions on our ability to liquidate an investment in a portfolio company to the extent that we have material non-public information regarding such portfolio company.

Table of Contents

Our portfolio may be concentrated in a limited number of portfolio companies and industries, which will subject us to a risk of significant loss if any of these companies performs poorly or defaults on its obligations under any of its debt instruments or if there is a downturn in a particular industry.

Our portfolio may be concentrated in a limited number of portfolio companies and industries. Beyond the asset diversification requirements associated with our qualification as a RIC under Subchapter M of the Code, we do not have fixed guidelines for diversification, and while we are not targeting any specific industries, our investments may be concentrated in relatively few industries or portfolio companies. As a result, the aggregate returns we realize may be significantly adversely affected if a small number of investments perform poorly or if we need to write down the value of any one investment. Additionally, a downturn in any particular industry in which we are invested could also significantly impact the aggregate returns we realize.

Our investments in securities rated below investment grade are speculative in nature and are subject to additional risk factors such as increased possibility of default, illiquidity of the security, and changes in value based on changes in interest rates.

The securities that we invest in are typically rated below investment grade. Securities rated below investment grade are often referred to as leveraged loans, high yield or junk securities, and may be considered high risk compared to debt instruments that are rated investment grade. High yield securities are regarded as having predominantly speculative characteristics with respect to the issuer's capacity to pay interest and repay principal in accordance with the terms of the obligations and involve major risk exposure to adverse conditions. In addition, high yield securities generally offer a higher current yield than that available from higher grade issues, but typically involve greater risk. These securities are especially sensitive to adverse changes in general economic conditions, to changes in the financial condition of their issuers and to price fluctuation in response to changes in interest rates. During periods of economic downturn or rising interest rates, issuers of below investment grade instruments may experience financial stress that could adversely affect their ability to make payments of principal and interest and increase the possibility of default. The secondary market for high yield securities may not be as liquid as the secondary market for more highly rated securities. In addition, many of our debt investments will not fully amortize during their lifetime, which could result in a loss or a substantial amount of unpaid principal and interest due upon maturity.

Price declines and illiquidity in the corporate debt markets have adversely affected, and may continue to adversely affect, the fair value of our portfolio investments, reducing our net asset value through increased net unrealized depreciation. Any unrealized depreciation that we experience on our loan portfolio may be an indication of future realized losses, which could reduce our income available for distribution and could adversely affect our ability to service our outstanding borrowings.

As a BDC, we are required to carry our investments at market value or, if no market value is ascertainable, at fair value as determined in good faith by or under the direction of our board of directors. Decreases in the market values or fair values of our investments are recorded as unrealized depreciation. Any unrealized depreciation in our loan portfolio could be an indication of a portfolio company's inability to meet its repayment obligations to us with respect to the affected loans. This could result in realized losses in the future and ultimately in reductions of our income available for distribution in future periods and could materially adversely affect our ability to service our outstanding borrowings. Depending on market conditions, we could incur substantial losses in future periods, which could further reduce our net asset value and have a material adverse impact on our business, financial condition and results of operations.

Global economic, political and market conditions may adversely affect our business, results of operations and financial condition, including our revenue growth and profitability.

The current worldwide financial market situation, as well as various social and political tensions in the United States and around the world, may contribute to increased market volatility, may have long-term effects on

Table of Contents

the U.S. and worldwide financial markets, and may cause economic uncertainties or deterioration in the United States and worldwide. The U.S. and global capital markets experienced extreme volatility and disruption during the economic downturn that began in mid-2007, and the U.S. economy was in a recession for several consecutive calendar quarters during the same period. In 2010, a financial crisis emerged in Europe, triggered by high budget deficits and rising direct and contingent sovereign debt, which created concerns about the ability of certain nations to continue to service their sovereign debt obligations. Risks resulting from such debt crisis, including any austerity measures taken in exchange for bailout of certain nations, and any future debt crisis in Europe or any similar crisis elsewhere could have a detrimental impact on the global economic recovery, sovereign and non-sovereign debt in certain countries and the financial condition of financial institutions generally. In June 2016, the United Kingdom held a referendum in which voters approved an exit from the European Union (Brexit) and, subsequently, on March 29, 2017, the U.K. government began the formal process of leaving the European Union, which is set to occur on March 29, 2019. Brexit created political and economic uncertainty and instability in the global markets (including currency and credit markets), and especially in the United Kingdom and the European Union, and this uncertainty and instability may last indefinitely. Because of the election results of the U.K. in June 2017, there is increased uncertainty on the timing of Brexit. There is continued concern about national-level support for the Euro and the accompanying coordination of fiscal and wage policy among European Economic and Monetary Union member countries. In addition, the fiscal and monetary policies of foreign nations, such as Russia and China, may have a severe impact on the worldwide and U.S. financial markets.

As a result of the 2016 U.S. election, the Republican Party currently controls both the executive and legislative branches of government, which increases the likelihood that legislation may be adopted that could significantly affect the regulation of U.S. financial markets. Areas subject to potential change, amendment or repeal include the Dodd-Frank Wall Street Reform and Consumer Protection Act and the authority of the Federal Reserve and the Financial Stability Oversight Council. The United States may also potentially withdraw from or renegotiate various trade agreements and take other actions that would change current trade policies of the United States. We cannot predict which, if any, of these actions will be taken or, if taken, their effect on the financial stability of the United States. Such actions could have a significant adverse effect on our business, financial condition and results of operations. We cannot predict the effects of these or similar events in the future on the U.S. economy and securities markets or on our investments. We monitor developments and seek to manage our investments in a manner consistent with achieving our investment objective, but there can be no assurance that we will be successful in doing so.

Volatility or a prolonged disruption in the credit markets could materially damage our business.

We are required to record our assets at fair value, as determined in good faith by our board of directors, in accordance with our valuation policy. As a result, volatility in the capital markets may have a material adverse effect on our valuations and our net asset value, even if we hold investments to maturity. Volatility or dislocation in the capital markets may depress our stock price below our net asset value per share and create a challenging environment in which to raise equity and debt capital. These conditions could continue for a prolonged period of time or worsen in the future. While these conditions persist, we and other companies in the financial services sector may have to access, if available, alternative markets for debt and equity capital. Equity capital may be difficult to raise because, subject to some limited exceptions which apply to us, as a BDC we are generally not able to issue additional shares of our common stock at a price less than net asset value without first obtaining approval for such issuance from our stockholders and our independent directors. At our 2017 Annual Stockholders Meeting, our stockholders approved our ability to sell or otherwise issue shares of our common stock, not exceeding 25% of our then outstanding common stock immediately prior to each such offering, at a price or prices below the then current net asset value per share, in each case subject to the approval of our board of directors and compliance with the conditions set forth in the proxy statement pertaining thereto, during a period beginning on May 17, 2017 and expiring on the earlier of the one-year anniversary of the date of the 2017 Annual Stockholders Meeting and the date of our 2018 Annual Stockholders

Meeting, which is expected to be held in May 2018. However, notwithstanding such stockholder approval, since our initial public offering on February 9, 2010, we have not sold any shares of our common stock in an offering that resulted in proceeds to us of less than our then current net asset value per share. Any offering of our common stock that requires stockholder approval must occur, if at all, within one year after receiving such stockholder approval. In addition,

Table of Contents

our ability to incur indebtedness (including by issuing preferred stock) is limited by applicable regulations such that our asset coverage, as defined in the 1940 Act, must equal at least 200% immediately after each time we incur indebtedness. The debt capital that will be available, if at all, may be at a higher cost and on less favorable terms and conditions in the future. Any inability to raise capital could have a negative effect on our business, financial condition and results of operations.

Additionally, our ability to incur indebtedness is limited by the asset coverage ratio for a BDC, as defined under the 1940 Act. Declining portfolio values negatively impact our ability to borrow additional funds because our net asset value is reduced for purposes of the asset coverage ratio. If the fair value of our assets declines substantially, we may fail to maintain the asset coverage ratio stipulated by the 1940 Act, which could, in turn, cause us to lose our status as a BDC and materially impair our business operations. A lengthy disruption in the credit markets could also materially decrease demand for our investments.

The significant disruption in the capital markets experienced in the past has had, and may in the future have, a negative effect on the valuations of our investments and on the potential for liquidity events involving our investments. The debt capital that may be available to us in the future may be at a higher cost and have less favorable terms and conditions than those currently in effect. If our financing costs increase and we have no increase in interest income, then our net investment income will decrease. A prolonged inability to raise capital may require us to reduce the volume of investments we originate and could have a material adverse impact on our business, financial condition and results of operations. This may also increase the probability that other structural risks negatively impact us. These situations may arise due to circumstances that we may be unable to control, such as a lengthy disruption in the credit markets, a severe decline in the value of the U.S. dollar, a sharp economic downturn or recession or an operational problem that affects third parties or us, and could materially damage our business, financial condition and results of operations.

If we cannot obtain additional capital because of either regulatory or market price constraints, we could be forced to curtail or cease our new lending and investment activities, our net asset value could decrease and our level of distributions and liquidity could be affected adversely.

Our ability to secure additional financing and satisfy our financial obligations under indebtedness outstanding from time to time will depend upon our future operating performance, which is subject to the prevailing general economic and credit market conditions, including interest rate levels and the availability of credit generally, and financial, business and other factors, many of which are beyond our control. The worsening of current economic and capital market conditions could have a material adverse effect on our ability to secure financing on favorable terms, if at all.

If we are unable to obtain debt capital, then our equity investors will not benefit from the potential for increased returns on equity resulting from leverage to the extent that our investment strategy is successful and we may be limited in our ability to make new commitments or fundings to our portfolio companies.

Uncertainty relating to the LIBOR calculation process may adversely affect the value of our portfolio of the LIBOR-indexed, floating-rate debt securities.

In the recent past, concerns have been publicized that some of the member banks surveyed by the British Bankers Association (BBA) in connection with the calculation of LIBOR across a range of maturities and currencies may have been under-reporting or otherwise manipulating the inter-bank lending rate applicable to them in order to profit on their derivatives positions or to avoid an appearance of capital insufficiency or adverse reputational or other consequences that may have resulted from reporting inter-bank lending rates higher than those they actually submitted. A number of BBA member banks have entered into settlements with their regulators and law enforcement

agencies with respect to alleged manipulation of LIBOR, and investigations by regulators and governmental authorities in various jurisdictions are ongoing.

Actions by the BBA, regulators or law enforcement agencies may result in changes to the manner in which LIBOR is determined. Uncertainty as to the nature of such potential changes may adversely affect the market for

Table of Contents

LIBOR-based securities, including our portfolio of LIBOR-indexed, floating-rate debt securities. In addition, any further changes or reforms to the determination or supervision of LIBOR may result in a sudden or prolonged increase or decrease in reported LIBOR, which could have an adverse impact on the market for LIBOR-based securities or the value of our portfolio of LIBOR-indexed, floating-rate debt securities. For example, on July 27, 2017, the U.K. Financial Conduct Authority announced that it intends to stop compelling banks to submit LIBOR rates after 2021. At this time, it is not possible to predict the effect of any such changes, any establishment of alternative reference rates or any other reforms to LIBOR that may be enacted in the United Kingdom or elsewhere. The elimination of LIBOR or any other changes or reforms to the determination or supervision of LIBOR could have an adverse impact on the market for or value of any LIBOR-linked securities, loans, and other financial obligations or extensions of credit held by or due to us or on our overall financial condition or results of operations.

Economic recessions or downturns could impair the ability of our portfolio companies to repay loans and harm our operating results.

Many of our portfolio companies may be susceptible to economic slowdowns or recessions and may be unable to repay our loans during these periods. Therefore, our non-performing assets may increase and the value of our portfolio may decrease during these periods as we are required to record the values of our investments. Adverse economic conditions also may decrease the value of collateral securing some of our loans and the value of our equity investments at fair value. Economic slowdowns or recessions could lead to financial losses in our portfolio and a decrease in revenues, net income and assets. Unfavorable economic conditions also could increase our funding costs, limit our access to the capital markets or result in a decision by lenders not to extend credit to us. These events could prevent us from increasing investments and result in our receipt of a reduced level of interest income from our portfolio companies and/or losses or charge offs related to our investments, and, in turn, may adversely affect distributable income and have a material adverse effect on our results of operations.

A portfolio company's failure to satisfy financial or operating covenants imposed by us or other lenders could lead to defaults and, potentially, acceleration of the time when the loans are due and foreclosure on its secured assets, which could trigger cross-defaults under other agreements and jeopardize the portfolio company's ability to meet its obligations under the debt that we hold. We may incur additional expenses to the extent necessary to seek recovery upon default or to negotiate new terms with a defaulting portfolio company. In addition, if one of our portfolio companies were to go bankrupt, depending on the facts and circumstances, including the extent to which we actually provided significant managerial assistance to that portfolio company, a bankruptcy court might re-characterize our debt holdings and subordinate all or a portion of our claim to that of other creditors.

These portfolio companies may face intense competition, including competition from companies with greater financial resources, more extensive research and development, manufacturing, marketing and service capabilities and greater number of qualified and experienced managerial and technical personnel. They may need additional financing that they are unable to secure and that we are unable or unwilling to provide, or they may be subject to adverse developments unrelated to the technologies they acquire.

We may suffer a loss if a portfolio company defaults on a loan and the underlying collateral is not sufficient.

In the event of a default by a portfolio company on a secured loan, we will only have recourse to the assets collateralizing the loan. If the underlying collateral value is less than the loan amount, we will suffer a loss. In addition, we sometimes make loans that are unsecured, which are subject to the risk that other lenders may be directly secured by the assets of the portfolio company. In the event of a default, those collateralized lenders would have priority over us with respect to the proceeds of a sale of the underlying assets. In cases described above, we may lack control over the underlying asset collateralizing our loan or the underlying assets of the portfolio company prior to a

default, and as a result the value of the collateral may be reduced by acts or omissions by owners or managers of the assets.

Table of Contents

In the event of bankruptcy of a portfolio company, we may not have full recourse to its assets in order to satisfy our loan, or our loan may be subject to equitable subordination. In addition, certain of our loans are subordinate to other debt of the portfolio company. If a portfolio company defaults on our loan or on debt senior to our loan, or in the event of a portfolio company bankruptcy, our loan will be satisfied only after the senior debt receives payment. Where debt senior to our loan exists, the presence of inter-creditor arrangements may limit our ability to amend our loan documents, assign our loans, accept prepayments, exercise our remedies (through standstill periods) and control decisions made in bankruptcy proceedings relating to the portfolio company. Bankruptcy and portfolio company litigation can significantly increase collection losses and the time needed for us to acquire the underlying collateral in the event of a default, during which time the collateral may decline in value, causing us to suffer further losses.

If the value of collateral underlying our loan declines or interest rates increase during the term of our loan, a portfolio company may not be able to obtain the necessary funds to repay our loan at maturity through refinancing. Decreasing collateral value and/or increasing interest rates may hinder a portfolio company's ability to refinance our loan because the underlying collateral cannot satisfy the debt service coverage requirements necessary to obtain new financing. If a borrower is unable to repay our loan at maturity, we could suffer a loss which may adversely impact our financial performance.

The business, financial condition and results of operations of our portfolio companies could be adversely affected by worldwide economic conditions, as well as political and economic conditions in the countries in which they conduct business.

The business and operating results of our portfolio companies may be impacted by worldwide economic conditions. Although the U.S. economy has in recent years shown signs of recovery from the 2008-2009 global recession, the strength and duration of any economic recovery will be impacted by worldwide economic growth. For instance, concerns of economic slowdown in China and other emerging markets and signs of deteriorating sovereign debt conditions in Europe could lead to disruption and instability in the global financial markets. The significant debt in the United States and European countries is expected to hinder growth in those countries for the foreseeable future. In the future, the U.S. government may not be able to meet its debt payments unless the federal debt ceiling is raised. If legislation increasing the debt ceiling is not enacted, as needed, and the debt ceiling is reached, the U.S. federal government may stop or delay making payments on its obligations, which could negatively impact the U.S. economy and our portfolio companies. Multiple factors relating to the international operations of some of our portfolio companies and to particular countries in which they operate could negatively impact their business, financial condition and results of operations.

Some of the products of our portfolio companies are developed, manufactured, assembled, tested or marketed outside the United States. Any conflict or uncertainty in these countries, including due to natural disasters, public health concerns, political unrest or safety concerns, could harm their business, financial condition and results of operations. In addition, if the government of any country in which their products are developed, manufactured or sold sets technical or regulatory standards for products developed or manufactured in or imported into their country that are not widely shared, it may lead some of their customers to suspend imports of their products into that country, require manufacturers or developers in that country to manufacture or develop products with different technical or regulatory standards and disrupt cross-border manufacturing, marketing or business relationships which, in each case, could harm their businesses.

Our failure to make follow-on investments in our portfolio companies could impair the value of our portfolio.

Following an initial investment in a portfolio company, we may make additional investments in that portfolio company as follow-on investments, in order to: (i) increase or maintain in whole or in part our ownership percentage;

- (ii) exercise warrants, options or convertible securities that were acquired in the original or subsequent financing; or
- (iii) attempt to preserve or enhance the value of our investment. We may elect not to

Table of Contents

make follow-on investments or otherwise lack sufficient funds to make those investments. We will have the discretion to make any follow-on investments, subject to the availability of capital resources. The failure to make follow-on investments may, in some circumstances, jeopardize the continued viability of a portfolio company and our initial investment, or may result in a missed opportunity for us to increase our participation in a successful operation. Even if we have sufficient capital to make a desired follow-on investment, we may elect not to make a follow-on investment because we may not want to increase our concentration of risk, either because we prefer other opportunities or because we are subject to BDC requirements that would prevent such follow-on investments or the desire to maintain our RIC tax treatment.

Where we do not hold controlling equity interests in our portfolio companies, we may not be in a position to exercise control over our portfolio companies or to prevent decisions by management of our portfolio companies that could decrease the value of our investments.

Although we hold controlling equity positions in some of our portfolio companies, we do not currently hold controlling equity positions in the majority of our portfolio companies. As a result, we are subject to the risk that a portfolio company in which we do not have a controlling interest may make business decisions with which we disagree, and that the management and/or stockholders of such portfolio company may take risks or otherwise act in ways that are adverse to our interests. Due to the lack of liquidity of the debt and equity investments that we typically hold in our portfolio companies, we may not be able to dispose of our investments in the event we disagree with the actions of a portfolio company and may therefore suffer a decrease in the value of our investments.

Prepayments of our debt investments by our portfolio companies could adversely impact our results of operations and reduce our return on equity.

We are subject to the risk that the investments we make in our portfolio companies may be prepaid prior to maturity. When this occurs, we may reduce our borrowings outstanding or reinvest these proceeds in temporary investments, pending their future investment in new portfolio companies. These temporary investments, if any, will typically have substantially lower yields than the debt investment being prepaid and we could experience significant delays in reinvesting these amounts. Any future investment in a new portfolio company may also be at lower yields than the debt investment that was prepaid. As a result, our results of operations could be materially adversely affected if one or more of our portfolio companies elect to prepay amounts owed to us. Additionally, prepayments could negatively impact our return on equity, which could result in a decline in the market price of our common stock.

We may choose to waive or defer enforcement of covenants in the debt securities held in our portfolio, which may cause us to lose all or part of our investment in these companies.

We structure the debt investments in our portfolio companies to include business and financial covenants placing affirmative and negative obligations on the operation of the company's business and its financial condition. However, from time to time we may elect to waive breaches of these covenants, including our right to payment, or waive or defer enforcement of remedies, such as acceleration of obligations or foreclosure on collateral, depending upon the financial condition and prospects of the particular portfolio company. These actions may reduce the likelihood of our receiving the full amount of future payments of interest or principal and be accompanied by a deterioration in the value of the underlying collateral as many of these companies may have limited financial resources, may be unable to meet future obligations and may go bankrupt. This could negatively impact our ability to pay distributions, could adversely affect our results of operation and financial condition and cause the loss of all or part of your investment.

Our loans could be subject to equitable subordination by a court which would increase our risk of loss with respect to such loans.

Courts may apply the doctrine of equitable subordination to subordinate the claim or lien of a lender against a borrower to claims or liens of other creditors of the borrower, when the lender or its affiliates is found to have

Table of Contents

engaged in unfair, inequitable or fraudulent conduct. The courts have also applied the doctrine of equitable subordination when a lender or its affiliates is found to have exerted inappropriate control over a client, including control resulting from the ownership of equity interests in a client. We have made direct equity investments or received warrants in connection with loans. Payments on one or more of our loans, particularly a loan to a client in which we may also hold an equity interest, may be subject to claims of equitable subordination. If we were deemed to have the ability to control or otherwise exercise influence over the business and affairs of one or more of our portfolio companies resulting in economic hardship to other creditors of that company, this control or influence may constitute grounds for equitable subordination and a court may treat one or more of our loans as if it were unsecured or common equity in the portfolio company. In that case, if the portfolio company were to liquidate, we would be entitled to repayment of our loan on a pro-rata basis with other unsecured debt or, if the effect of subordination was to place us at the level of common equity, then on an equal basis with other holders of the portfolio company's common equity only after all of its obligations relating to its debt and preferred securities had been satisfied.

An investment strategy focused primarily on privately held companies presents certain challenges, including the lack of available information about these companies, a dependence on the talents and efforts of only a few key portfolio company personnel and a greater vulnerability to economic downturns.

We invest primarily in privately held companies. Generally, little public information exists about these companies, and we are required to rely on the ability of Solar Capital Partners' investment professionals to obtain adequate information to evaluate the potential returns from investing in these companies. If we are unable to uncover all material information about these companies, we may not make a fully informed investment decision, and we may lose money on our investments. Also, smaller privately held companies frequently have less diverse product lines and smaller market presence than larger competitors. These factors could adversely affect our investment returns as compared to companies investing primarily in the securities of public companies.

Our portfolio companies may incur debt that ranks equally with, or senior to, our investments in such companies.

We invest primarily in senior secured loans, stretch-senior loans, unitranche loans, mezzanine loans, preferred securities, and equity securities issued by our portfolio companies. Our portfolio companies typically have, or may be permitted to incur, other debt that ranks equally with, or senior to, the debt securities in which we invest. By their terms, such debt instruments may provide that the holders are entitled to receive payment of interest or principal on or before the dates on which we are entitled to receive payments in respect of the debt securities in which we invest. Also, in the event of insolvency, liquidation, dissolution, reorganization or bankruptcy of a portfolio company, holders of debt instruments ranking senior to our investment in that portfolio company would typically be entitled to receive payment in full before we receive any distribution in respect of our investment. After repaying such senior creditors, such portfolio company may not have any remaining assets to use for repaying its obligation to us. In the case of debt ranking equally with debt securities in which we invest, we would have to share on an equal basis any distributions with other creditors holding such debt in the event of an insolvency, liquidation, dissolution, reorganization or bankruptcy of the relevant portfolio company. Any such limitations on the ability of our portfolio companies to make principal or interest payments to us, if at all, may reduce our net asset value and have a negative material adverse impact to our business, financial condition and results of operation.

Our investments in foreign securities may involve significant risks in addition to the risks inherent in U.S. investments.

Our investment strategy contemplates potential investments in debt securities of foreign companies. Investing in foreign companies may expose us to additional risks not typically associated with investing in U.S. companies. These risks include changes in exchange control regulations, political and social instability, expropriation, imposition of

foreign taxes, less liquid markets and less available information than is generally the

Table of Contents

case in the United States, higher transaction costs, less government supervision of exchanges, brokers and issuers, less developed bankruptcy laws, difficulty in enforcing contractual obligations, lack of uniform accounting and auditing standards and greater price volatility.

Although most of our investments will be U.S. dollar-denominated, any investments denominated in a foreign currency will be subject to the risk that the value of a particular currency will change in relation to one or more other currencies. Among the factors that may affect currency values are trade balances, the level of short-term interest rates, differences in relative values of similar assets in different currencies, long-term opportunities for investment and capital appreciation, and political developments. We may employ hedging techniques to minimize these risks, but we can offer no assurance that we will, in fact, hedge currency risk, or that if we do, such strategies will be effective.

We may expose ourselves to risks if we engage in hedging transactions.

If we engage in hedging transactions, we may expose ourselves to risks associated with such transactions. We may utilize instruments such as forward contracts, currency options and interest rate swaps, caps, collars and floors to seek to hedge against fluctuations in the relative values of our portfolio positions from changes in currency exchange rates and market interest rates. Hedging against a decline in the values of our portfolio positions does not eliminate the possibility of fluctuations in the values of such positions or prevent losses if the values of such positions decline. However, such hedging can establish other positions designed to gain from those same developments, thereby offsetting the decline in the value of such portfolio positions. Such hedging transactions may also limit the opportunity for gain if the values of the underlying portfolio positions should increase. It may not be possible to hedge against an exchange rate or interest rate fluctuation that is so generally anticipated that we are not able to enter into a hedging transaction at an acceptable price.

The success of our hedging transactions will depend on our ability to correctly predict movements in currencies and interest rates. Therefore, while we may enter into such transactions to seek to reduce currency exchange rate and interest rate risks, unanticipated changes in currency exchange rates or interest rates may result in poorer overall investment performance than if we had not engaged in any such hedging transactions. In addition, the degree of correlation between price movements of the instruments used in a hedging strategy and price movements in the portfolio positions being hedged may vary. Moreover, for a variety of reasons, we may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Any such imperfect correlation may prevent us from achieving the intended hedge and expose us to risk of loss. In addition, it may not be possible to hedge fully or perfectly against currency fluctuations affecting the value of securities denominated in non-U.S. currencies because the value of those securities is likely to fluctuate as a result of factors not related to currency fluctuations. To the extent we engage in hedging transactions, we also face the risk that counterparties to the derivative instruments we hold may default, which may expose us to unexpected losses from positions where we believed that our risk had been appropriately hedged.

Our investment adviser may not be able to achieve the same or similar returns as those achieved by our senior investment professionals while they were employed at prior positions.

Although in the past our senior investment professionals held senior positions at a number of investment firms, their track record and achievements are not necessarily indicative of future results that will be achieved by our investment adviser. In their roles at such other firms, our senior investment professionals were part of investment teams, and they were not solely responsible for generating investment ideas. In addition, such investment teams arrived at investment decisions by consensus.

Table of Contents

Risks Relating to an Investment in Our Securities

Our shares may trade at a substantial discount from net asset value and may continue to do so over the long term.

Shares of BDCs may trade at a market price that is less than the net asset value that is attributable to those shares. The possibility that our shares of common stock will trade at a substantial discount from net asset value over the long term is separate and distinct from the risk that our net asset value will decrease. We cannot predict whether shares of our common stock will trade above, at or below our net asset value in the future. If our common stock trades below its net asset value, we will generally not be able to issue additional shares or sell our common stock at its market price without first obtaining the approval for such issuance from our stockholders and our independent directors. At our 2017 Annual Stockholders Meeting, our stockholders approved our ability to sell or otherwise issue shares of our common stock, not exceeding 25% of our then outstanding common stock immediately prior to each such offering, at a price or prices below the then current net asset value per share, in each case subject to the approval of our board of directors and compliance with the conditions set forth in the proxy statement pertaining thereto, during a period beginning on May 17, 2017 and expiring on the earlier of the one-year anniversary of the date of the 2017 Annual Stockholders Meeting and the date of our 2018 Annual Stockholders Meeting, which is expected to be held in May 2018. However, notwithstanding such stockholder approval, since our initial public offering on February 9, 2010, we have not sold any shares of our common stock in an offering that resulted in proceeds to us of less than our then current net asset value per share. Any offering of our common stock that requires stockholder approval must occur, if at all, within one year after receiving such stockholder approval. If additional funds are not available to us, we could be forced to curtail or cease our new lending and investment activities, and our net asset value could decrease and our level of distributions could be impacted.

Our common stock price may be volatile and may decrease substantially.

The trading price of our common stock may fluctuate substantially. The price of our common stock that will prevail in the market may be higher or lower than the price you pay, depending on many factors, some of which are beyond our control and may not be directly related to our operating performance. These factors include, but are not limited to, the following:

price and volume fluctuations in the overall stock market from time to time;

investor demand for our shares;

significant volatility in the market price and trading volume of securities of BDCs or other companies in our sector, which are not necessarily related to the operating performance of these companies;

exclusion of our common stock from certain market indices, such as the Russell 2000 Financial Services Index, which could reduce the ability of certain investment funds to own our common stock and put short-term selling pressure on our common stock;

changes in regulatory policies or tax guidelines with respect to RICs or BDCs;

failure to qualify as a RIC, or the loss of RIC tax treatment;

any shortfall in revenue or net income or any increase in losses from levels expected by investors or securities analysts;

changes, or perceived changes, in the value of our portfolio investments;

departures of Solar Capital
