Forward-Looking Statements

Certain of the statements contained herein are forward-looking statements made pursuant to the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. Forward-looking statements can be identified by words such as “anticipates,” “intends,” “plans,” “seeks,” “believes,” “estimates,” “expects,” “projects,” and similar references to future performance. Forward-looking statements are based on our current expectations and assumptions regarding economic, competitive, legislative and other developments. Because forward-looking statements relate to the future, they are subject to inherent uncertainties, risks and changes in circumstances that are difficult to predict. They have been made based upon management’s expectations and beliefs concerning future developments and their potential effect upon The Hartford Financial Services Group, Inc. and its subsidiaries (collectively, the “Company” or “The Hartford”). Future developments may not be in line with management’s expectations or may have unanticipated effects. Actual results could differ materially from expectations, depending on the evolution of various factors, including those set forth in Part I, Item 1A, Risk Factors in The Hartford’s 2012 Form 10-K Annual Report; and Part II, Item IA, Risk Factors in The Hartford’s Quarterly Report on Form 10-Q for the quarter ended March 31, 2013. These important risks and uncertainties include:

challenges related to the Company’s current operating environment, including continuing uncertainty about the strength and speed of the recovery in the United States and other key economies and the impact of governmental stimulus and austerity initiatives, sovereign credit concerns, a sustained low interest rate environment, higher tax rates, and other potentially adverse developments on financial, commodity and credit markets and consumer spending and investment and the effect of these events on our returns in investment portfolios and our hedging costs associated with our variable annuities business;

the risks, challenges and uncertainties associated with our capital management plan and our strategic realignment to focus on our property and casualty, group benefits and mutual fund businesses, place our Individual Annuity business into run-off and the sales of the Individual Life, Woodbury Financial Services, Retirement Plans, and U.K. variable annuity businesses;

the risks, challenges and uncertainties associated with actions beyond the capital management plan and strategic realignment, which may include acquisitions, divestitures or restructurings, and the potential that any such actions may negatively impact our business, financial condition, results of operations and liquidity;

execution risk related to the continued reinvestment of our investment portfolios and refinement of our hedge program for our runoff annuity block;

the future capital self-sufficiency of the Company's Talcott Resolution businesses;

market risks associated with our business, including changes in interest rates, credit spreads, equity prices, market volatility and foreign exchange rates, and implied volatility levels, as well as continuing uncertainty in key sectors such as the global real estate market;

the possibility of unfavorable loss development including with respect to long-tailed exposures;

the possibility of a pandemic, earthquake, or other natural or man-made disaster that may adversely affect our businesses;

- weather and other natural physical events, including the severity and frequency of storms, hail, winter storms, hurricanes and tropical storms, as well as climate change and its potential impact on weather patterns;

risk associated with the use of analytical models in making decisions in key areas such as underwriting, capital, hedging, reserving, and catastrophe risk management;

the uncertain effects of emerging claim and coverage issues;

the Company’s ability to effectively price its property and casualty policies, including its ability to obtain regulatory consents to pricing actions or to non-renewal or withdrawal of certain product lines;

- the impact on our statutory capital of various factors, including many that are outside the Company’s control, which can in turn affect our credit and financial strength ratings, cost of capital, regulatory compliance and other aspects of our business and results;

risks to our business, financial position, prospects and results associated with negative rating actions or downgrades in the Company’s financial strength and credit ratings or negative rating actions or downgrades relating to our investments;

the impact on our investment portfolio if our investment portfolio is concentrated in any particular segment of the economy;

volatility in our earnings and potential material changes to our results resulting from our adjustment of our risk management program to emphasize protection of economic value;

- the potential for differing interpretations of the methodologies, estimations and assumptions that underlie the valuation of the Company's financial instruments that could result in changes to investment valuations;

3

Table of Contents

- the subjective determinations that underlie the Company's evaluation of other-than-temporary impairments on available-for-sale securities;
- losses due to nonperformance or defaults by others;
- the potential for further acceleration of deferred policy acquisition cost amortization;
- the potential for further impairments of our goodwill or the potential for changes in valuation allowances against deferred tax assets;
- the possible occurrence of terrorist attacks and the Company's ability to contain its exposure, including the effect of the absence or insufficiency of applicable terrorism legislation on coverage;
- the difficulty in predicting the Company's potential exposure for asbestos and environmental claims;
- the response of reinsurance companies under reinsurance contracts and the availability, pricing and adequacy of reinsurance to protect the Company against losses;
- actions by our competitors, many of which are larger or have greater financial resources than we do;
- the Company's ability to distribute its products through distribution channels, both current and future;
- the cost and other effects of increased regulation as a result of the enactment of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the "Dodd-Frank Act"), which, among other effects, vests a Financial Services Oversight Council with the power to designate "systemically important" institutions, requires central clearing of, and/or imposes margin and capital requirements on, derivatives transactions, and created a new "Federal Insurance Office" within the U.S. Department of the Treasury ("Treasury");
- unfavorable judicial or legislative developments;
- the potential effect of other domestic and foreign regulatory developments, including those that could adversely impact the demand for the Company's products, operating costs and required capital levels;
- regulatory limitations on the ability of the Company and certain of its subsidiaries to declare and pay dividends;
- the Company's ability to maintain the availability of its systems and safeguard the security of its data in the event of a disaster, cyber or other information security incident or other unanticipated event;
- the risk that our framework for managing operational risks may not be effective in mitigating material risk and loss to the Company;
- the potential for difficulties arising from outsourcing relationships;
- the impact of changes in federal or state tax laws;
- regulatory requirements that could delay, deter or prevent a takeover attempt that shareholders might consider in their best interests;
- the impact of potential changes in accounting principles and related financial reporting requirements;
- the impact of any future errors in financial reporting;
- the Company's ability to protect its intellectual property and defend against claims of infringement;
- the Company's ability to implement its capital plan; and
- other factors described in such forward-looking statements.

Any forward-looking statement made by the Company in this document speaks only as of the date of the filing of this Form 10-Q. Factors or events that could cause the Company's actual results to differ may emerge from time to time, and it is not possible for the Company to predict all of them. The Company undertakes no obligation to publicly update any forward-looking statement, whether as a result of new information, future developments or otherwise.

Part I. FINANCIAL INFORMATION

Item 1. Financial Statements

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
The Hartford Financial Services Group, Inc.
Hartford, Connecticut

We have reviewed the accompanying condensed consolidated balance sheet of The Hartford Financial Services Group, Inc. and subsidiaries (the "Company") as of September 30, 2013, and the related condensed consolidated statements of operations and comprehensive income (loss) for the three-month and nine-month periods ended September 30, 2013 and 2012 and statements of changes in stockholders' equity and cash flows for the nine-month periods ended September 30, 2013 and 2012. These interim financial statements are the responsibility of the Company's management.

We conducted our reviews in accordance with the standards of the Public Company Accounting Oversight Board (United States). A review of interim financial information consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States), the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

Based on our reviews, we are not aware of any material modifications that should be made to such condensed consolidated interim financial statements for them to be in conformity with accounting principles generally accepted in the United States of America.

We have previously audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheet of the Company as of December 31, 2012, and the related consolidated statements of operations, comprehensive income, changes in stockholders' equity, and cash flows for the year then ended (not presented herein); and in our report dated March 1, 2013 (August 9, 2013 as to the retrospective presentation of discontinued operations and the retrospective adoption of a change in disclosure of offsetting assets and liabilities)(which report includes an explanatory paragraph relating to the Company's change in its method of accounting and reporting for costs associated with acquiring or renewing insurance contracts, the retrospective presentation of discontinued operations, and the retrospective adoption of a change in disclosure of offsetting assets and liabilities), we expressed an unqualified opinion on those consolidated financial statements. In our opinion, the information set forth in the accompanying condensed consolidated balance sheet as of December 31, 2012 is fairly stated, in all material respects, in relation to the consolidated balance sheet from which it has been derived.

THE HARTFORD FINANCIAL SERVICES GROUP, INC.
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Dollar amounts in millions, except for per share data, unless otherwise stated)
(Unaudited)

1. Basis of Presentation and Significant Accounting Policies

The Hartford Financial Services Group, Inc. is a holding company for insurance and financial services subsidiaries that provide property and casualty and life insurance as well as investment products to both individual and business customers in the United States (collectively, "The Hartford", the "Company", "we" or "our"). Also, the Company continues to manage life and annuity products previously sold.

On January 1, 2013, the Company completed the sale of its Retirement Plans business to Massachusetts Mutual Life Insurance Company ("MassMutual") and on January 2, 2013 the Company completed the sale of its Individual Life insurance business to The Prudential Insurance Company of America ("Prudential"), a subsidiary of Prudential Financial, Inc. For further discussion of these and other such transactions, see Note 2 - Business Dispositions of the Notes to Consolidated Financial Statements.

The Condensed Consolidated Financial Statements have been prepared in accordance with accounting principles generally accepted in the United States of America ("U.S. GAAP") for interim financial information, which differ materially from the accounting practices prescribed by various insurance regulatory authorities. These Condensed Consolidated Financial Statements and Notes should be read in conjunction with the Consolidated Financial Statements and Notes thereto included in the Company's 2012 Form 10-K Annual Report. The results of operations for interim periods are not necessarily indicative of the results that may be expected for the full year.

The accompanying Condensed Consolidated Financial Statements and Notes as of September 30, 2013, and for the three and nine months ended September 30, 2013 and 2012 are unaudited. These financial statements reflect all adjustments (generally consisting only of normal accruals) which are, in the opinion of management, necessary for the fair presentation of the financial position, results of operations and cash flows for the interim periods. The Company's significant accounting policies are summarized in Note 1 - Basis of Presentation and Accounting Policies of Notes to Consolidated Financial Statements included in the Company's 2012 Form 10-K Annual Report.

Consolidation

The Condensed Consolidated Financial Statements include the accounts of The Hartford Financial Services Group, Inc., companies in which the Company directly or indirectly has a controlling financial interest and those variable interest entities ("VIEs") in which the Company is required to consolidate. Entities in which the Company has significant influence over the operating and financing decisions but are not required to consolidate are reported using the equity method. Material intercompany transactions and balances between The Hartford and its subsidiaries and affiliates have been eliminated. For further information on VIEs see Note 6 - Investments and Derivative Instruments of Notes to Condensed Consolidated Financial Statements.

Discontinued Operations

The results of operations of a component of the Company that either has been disposed of or is classified as held-for-sale are reported in discontinued operations if the operations and cash flows of the component have been or will be eliminated from the ongoing operations of the Company as a result of the disposal transaction and the Company will not have any significant continuing involvement in the operations of the component after the disposal transaction.

The Company is presenting the operations of certain businesses that meet the criteria for reporting as discontinued operations. Amounts for prior periods have been retrospectively reclassified. For information on the specific businesses and related impacts, see Note 14 - Discontinued Operations of Notes to Condensed Consolidated Financial Statements.

Use of Estimates

The preparation of financial statements, in conformity with U.S. GAAP, requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

The most significant estimates include those used in determining property and casualty insurance product reserves, net of reinsurance; estimated gross profits used in the valuation and amortization of assets and liabilities associated with variable annuity and other universal life-type contracts; evaluation of other-than-temporary impairments on available-for-sale securities and valuation allowances on investments; living benefits required to be fair valued; goodwill impairment; valuation of investments and derivative instruments; valuation allowance on deferred tax assets; and contingencies relating to corporate litigation and regulatory matters. Certain of these estimates are particularly sensitive to market conditions, and deterioration and/or volatility in the worldwide debt or equity markets could have a material impact on the Condensed Consolidated Financial Statements.

Table of Contents

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

1. Basis of Presentation and Accounting Policies (continued)

Mutual Funds

The Company maintains a retail mutual fund operation whereby the Company provides investment management, administrative and distribution services to The Hartford Mutual Funds, Inc. and The Hartford Mutual Funds II, Inc. (collectively, “mutual funds”). These mutual funds are registered with the Securities and Exchange Commission (“SEC”) under the Investment Company Act of 1940. The mutual funds are owned by the shareholders of those funds and not by the Company. As such, the mutual fund assets and liabilities and related investment returns are not reflected in the Company’s Condensed Consolidated Financial Statements since they are not assets, liabilities and operations of the Company.

Income Taxes

A reconciliation of the tax provision at the U.S. Federal statutory rate to the provision for income taxes is as follows:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2013	2012	2013	2012
Tax benefit at U.S. Federal statutory rate	\$120	\$(17)	\$(110)	\$(119)
Tax-exempt interest	(34)	(35)	(103)	(106)
Dividends received deduction	(36)	(28)	(101)	(91)
Other [1]	(5)	39	6	30
Income tax expense (benefit)	\$45	\$(41)	\$(308)	\$(286)

[1] Includes a permanent difference of \$25 related to non-deductible goodwill for the nine months ended September 30, 2013.

The separate account dividends-received deduction (“DRD”) is estimated for the current year using information from the most recent return, adjusted for current year equity market performance and other appropriate factors, including estimated levels of corporate dividend payments and level of policy owner equity account balances. The actual current year DRD can vary from estimates based on, but not limited to, changes in eligible dividends received in the mutual funds, amounts of distribution from these mutual funds, amounts of short-term capital gains at the mutual fund level and the Company’s taxable income before the DRD. The Company evaluates its DRD computations on a quarterly basis.

The Company’s \$48 unrecognized tax benefits were unchanged for the three and nine months ended September 30, 2013. This entire amount, if it were recognized, would affect the effective tax rate in the period it is released.

The Company and its subsidiaries file income tax returns in the U.S. federal jurisdiction, and various states and foreign jurisdictions as applicable. The Company is no longer subject to U.S. federal, state and local, or non-U.S. income tax examinations for years prior to 2007. The audit of the years 2007-2009 commenced during 2010 and is expected to conclude in the second half of 2014. The 2010-2011 audit commenced in the fourth quarter of 2012 and is expected to conclude by the end of 2014. Management believes that adequate provision has been made in the financial statements for any potential assessments that may result from tax examinations and other tax-related matters for all open tax years.

The Company recorded a deferred tax asset valuation allowance that is adequate to reduce the total deferred tax asset to an amount that will be more likely than not realized. The deferred tax asset valuation allowance was \$5, attributable to U.S. net operating losses, as of September 30, 2013 and \$58, attributable mostly to foreign net operating losses, as of December 31, 2012. In assessing the need for a valuation allowance, management considered future taxable temporary difference reversals, future taxable income exclusive of reversing temporary differences and carryforwards, taxable income in open carry back years, as well as other tax planning strategies. These tax planning strategies include

holding a portion of debt securities with market value losses until recovery, altering the level of tax exempt securities, selling appreciated securities to offset capital losses, business considerations such as asset-liability matching, and the sales of certain corporate assets. Management views such tax planning strategies as prudent and feasible, and will implement them, if necessary, to realize the deferred tax asset. Future economic conditions and debt market volatility, including increases in interest rates, can adversely impact the Company's tax planning strategies and in particular the Company's ability to utilize tax benefits on previously recognized realized capital losses.

Reclassifications

Certain reclassifications have been made to prior period financial information to conform to the current year presentation.

Table of Contents

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

2. Business Dispositions

Sale of Hartford Life International Limited ("HLIL")

On June 27, 2013, the Company announced the signing of a definitive agreement to sell HLIL, an indirect wholly-owned subsidiary, in a cash transaction to Columbia Insurance Company, a Berkshire Hathaway company, for approximately \$285. At closing, HLIL's sole asset will be its subsidiary, Hartford Life Limited, a Dublin-based company that sold variable annuities in the U.K. from 2005 to 2009. The Company's U.K. variable annuities business is included in the Talcott Resolution reporting segment. As the sale transaction is expected to result in a loss upon disposition, the Company recognized an estimated after-tax loss of approximately \$102 for the nine months ended September 30, 2013, upon signing the agreement. The related loss accrual is included as a reduction of the carrying value of assets held for sale in the Company's Condensed Consolidated Balance Sheets as of September 30, 2013. The purchase price is based on HLIL's financial position as of March 31, 2013. Certain accounting results that occur after March 31, 2013 through the date of the closing of the transaction are passed to the buyer. The transaction, which is subject to customary closing conditions and regulatory approvals, is expected to close by the end of 2013. The operations of the Company's U.K. variable annuity business meet the criteria for reporting as discontinued operations as further discussed in Note 14 - Discontinued Operations.

Sale of Retirement Plans

On January 1, 2013, the Company completed the sale of its Retirement Plans business to MassMutual for a ceding commission of \$355. The business sold included products and services provided to corporations pursuant to Section 401(k) of the Internal Revenue Code of 1986, as amended (the "Code"), and products and services provided to municipalities and not-for-profit organizations under Sections 457 and 403(b) of the Code, collectively referred to as government plans. The sale was structured as a reinsurance transaction and resulted in an after-tax loss of \$25 for the nine months ended September 30, 2013. The after-tax loss is primarily driven by the reduction in goodwill that is non-deductible for income tax purposes. The Company recognized \$634 in reinsurance loss on disposition offset by \$634 in net realized capital gains for a \$0 impact on income, pre-tax. These amounts are subject to change pending final determination of the value of net assets sold, transaction costs and other adjustments.

Upon closing, the Company reinsured \$9.2 billion of policyholder liabilities and \$26.3 billion of separate account liabilities under an indemnity reinsurance arrangement. The reinsurance transaction does not extinguish the Company's primary liability on the insurance policies issued under the Retirement Plans business. The Company also transferred invested assets with a carrying value of \$9.3 billion, net of the ceding commission, to MassMutual and recognized other non-cash decreases in assets totaling \$200 relating to deferred acquisition costs, deferred income taxes, goodwill, property and equipment and other assets associated with the disposition. The Company will continue to sell retirement plans during a transition period of 18-24 months and MassMutual will assume all expenses and risk for these sales through the reinsurance agreement.

The Retirement Plans business is included in the Talcott Resolution reporting segment. For the three and nine months ended September 30, 2012, Retirement Plans total revenues were \$193 and \$592, respectively and net income (loss) was (\$7) and \$9, respectively.

Sale of Individual Life

On January 2, 2013, the Company completed the sale of its Individual Life insurance business to Prudential for consideration of \$615 consisting primarily of a ceding commission. The business sold included variable universal life, universal life, and term life insurance. The sale was structured as a reinsurance transaction and resulted in a loss on business disposition consisting of a reinsurance loss partially offset by realized capital gains. The Company recognized a reinsurance loss on business disposition of \$533, pre-tax, which included a goodwill impairment charge of \$342 and a loss accrual for premium deficiency of \$191 for the three and nine months ended September 30, 2012. The loss accrual of \$191 is included in other liabilities as of December 31, 2012. For additional information, see Note 2 - Business Dispositions and Note 9 - Goodwill and Other Intangible Assets in The Hartford's 2012 Annual Report on Form 10-K. Upon closing the Company recognized an additional \$940 in reinsurance loss on disposition offset by

\$940 in realized capital gains for a \$0 impact on income, pre-tax. These amounts are subject to change pending final determination of the value of net assets sold, transaction costs and other adjustments.

Upon closing, the Company reinsured \$8.7 billion of policyholder liabilities and \$5.3 billion of separate account liabilities under indemnity reinsurance arrangements. The reinsurance transaction does not extinguish the Company's primary liability on the insurance policies issued under the Individual Life business. The Company also transferred invested assets with a carrying value of \$8.0 billion, exclusive of \$1.4 billion of assets supporting the modified coinsurance agreement, net of cash transferred in place of short-term investments, to Prudential and recognized other non-cash decreases in assets totaling \$1.8 billion relating to deferred acquisition costs, deferred income taxes, property and equipment and other assets and other non-cash decreases in liabilities totaling \$1.5 billion relating to other liabilities including the \$191 loss accrual for premium deficiency, associated with the disposition. The Company will continue to sell life insurance products and riders during a transition period of 18-24 months and Prudential will assume all expenses and risk for these sales through the reinsurance agreement.

The Individual Life business is included in the Talcott Resolution reporting segment. For the three and nine months ended September 30, 2012, Individual Life total revenues were \$325 and \$1,039, respectively and net loss was \$(259) and \$(204), respectively.

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

2. Business Dispositions (continued)

Composition of Invested Assets Transferred

The following table presents invested assets transferred by the Company in connection with the sale of the Retirement Plans and Individual Life businesses in January 2013.

	Carrying Value As of Closing
Asset-backed securities ("ABS")	\$ 289
Collateralized debt obligations ("CDOs") [1]	474
Commercial mortgage-backed securities ("CMBS")	949
Corporate	11,651
Foreign government/government agencies	263
States, municipalities and political subdivisions ("Municipal")	900
Residential mortgage-backed securities ("RMBS")	707
U.S. Treasuries	116
Total fixed maturities, available-for-sale ("AFS") at fair value (amortized cost of \$13,916) [2]	15,349
Equity securities, AFS, at fair value (cost of \$35) [3]	37
Fixed maturities, at fair value using the fair value option ("FVO") [4]	16
Mortgage loans (net of allowances for loan losses of \$1)	1,364
Policy loans, at outstanding balance	582
Total invested assets transferred	\$ 17,348

[1] The market value includes the fair value of bifurcated embedded derivative features of certain securities. Changes in fair value are recorded in the net realized capital gains (losses).

[2] Includes \$14.7 billion and \$670 of securities in level 2 and 3 of the fair value hierarchy, respectively.

[3] All equity securities transferred are included in level 2 of the fair value hierarchy.

[4] All FVO securities transferred are included in level 3 of the fair value hierarchy.

Purchase Agreement with Forethought Financial Group, Inc.

Effective May 1, 2012, all new U.S. annuity policies sold by the Company are reinsured to Forethought Life Insurance Company. The Company ceased the sale of such annuity policies in the second quarter of 2013. The reinsurance agreement has no impact on in-force policies issued on or before April 27, 2012 and the impact of this transaction was not material to the Company's results of operations, financial position or liquidity. On December 31, 2012, the Company completed the sale of its U.S. individual annuity new business capabilities to Forethought Financial Group. The Individual Annuity business is included in the Talcott Resolution reporting segment.

Sale of Catalyst 360

In October 2013, the Company signed an agreement to sell its member contact center for health insurance products offered through the AARP Health Program ("Catalyst 360") to Optum, Inc., a division of UnitedHealth Group. This agreement is expected to result in an immaterial gain and to close by the end of 2013. The Company will provide limited transition services for 18-24 months. Catalyst 360 is included in the Consumer Markets reporting segment.

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

3. Earnings (Loss) Per Common Share

The following table presents a reconciliation of net income (loss) and shares used in calculating basic earnings (loss) per common share to those used in calculating diluted earnings (loss) per common share.

(In millions, except for per share data)	Three Months		Nine Months	
	Ended September 30,		Ended September 30,	
	2013	2012	2013	2012
Earnings				
Income (loss) from continuing operations				
Income (loss) from continuing operations, net of tax	\$298	\$(7)	\$(6)	\$(55)
Less: Preferred stock dividends	—	10	10	31
Income (loss) from continuing operations, net of tax, available to common shareholders	\$298	\$(17)	\$(16)	\$(86)
Income (loss) from discontinued operations, net of tax	\$(5)	\$20	\$(132)	\$63
Net income (loss)	\$293	\$13	\$(138)	\$8
Less: Preferred stock dividends	—	10	10	31
Net income (loss) available to common shareholders	\$293	\$3	\$(148)	\$(23)
Shares				
Weighted average common shares outstanding, basic	452.1	435.8	446.6	438.2
Dilutive effect of warrants	33.9	23.8	—	—
Dilutive effect of stock compensation plans	4.6	2.1	—	—
Weighted average shares outstanding and dilutive potential common shares	490.6	461.7	446.6	438.2
Earnings (loss) per common share				
Basic				
Income (loss) from continuing operations, net of tax, available to common shareholders	\$0.66	\$(0.04)	\$(0.04)	\$(0.20)
Income (loss) from discontinued operations, net of tax	(0.01)	0.05	(0.29)	0.15
Net income (loss) available to common shareholders	\$0.65	\$0.01	\$(0.33)	\$(0.05)
Diluted				
Income (loss) from continuing operations, net of tax, available to common shareholders	\$0.61	\$(0.04)	\$(0.04)	\$(0.20)
Income (loss) from discontinued operations, net of tax	(0.01)	0.05	(0.29)	0.15
Net income (loss) available to common shareholders	\$0.60	\$0.01	\$(0.33)	\$(0.05)

As a result of the losses available to common shareholders for the nine months ended September 30, 2013, the Company was required to use basic weighted average common shares outstanding in the calculation of diluted loss per share, since the inclusion of shares for warrants of 33.0 million, stock compensation plans of 4.2 million, and mandatory convertible preferred shares, along with the related dividend adjustment, of 8.3 million, would have been antidilutive to the earnings (loss) per share calculations. In the absence of the losses, weighted average common shares outstanding and dilutive potential common shares would have totaled 492.1 million.

For the three months ended September 30, 2012, mandatory convertible preferred shares, along with the related dividend adjustment, of 21.0 million, would have been antidilutive to the earnings per share calculations. Assuming the impact of the mandatory convertible preferred shares was not antidilutive, weighted average common shares outstanding and dilutive potential common shares would have totaled 482.7 million for the three months ended September 30, 2012.

As a result of the losses available to common shareholders for the nine months ended September 30, 2012, the Company was required to use basic weighted average common shares outstanding in the calculation of diluted loss per share, since the inclusion of shares for warrants of 25.1 million, stock compensation plans of 1.9 million and mandatory convertible preferred shares, along with the related dividend adjustment, of 20.9 million, would have been antidilutive to the earnings (loss) per share calculations. In the absence of the losses, weighted average common shares outstanding and dilutive potential common shares would have totaled 486.1 million.

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

3. Earnings (Loss) Per Common Share (continued)

The declaration of a quarterly common stock dividend of \$0.10 during the first and second quarter and \$0.15 during the third quarter of 2013 triggered a provision in The Hartford's Warrant Agreement with The Bank of New York Mellon, relating to warrants to purchase common stock issued in connection with the Company's participation in the Capital Purchase Program, resulting in an adjustment to the warrant exercise price. The warrant exercise price at September 30, 2013, June 30, 2013, March 31, 2013 was \$9.531, \$9.563 and \$9.579, respectively.

The declaration of a quarterly common stock dividend in the first quarter of 2013 triggered a provision in The Hartford's Fixed Conversion Rate Agreement, relating to the Company's mandatory convertible preferred stock, resulting in an adjustment to the minimum conversion rate to 30.1920 from 29.8831 shares of Common Stock per share of Series F Preferred Stock and the maximum conversion rate to 36.8365 from 36.4596 shares of Common Stock per share of Series F Preferred Stock. On April 1, 2013 the mandatory convertible preferred stock converted to 21.2 million shares of common stock at the conversion rate of 36.8365.

4. Segment Information

The Company currently conducts business principally in six reporting segments, as well as a Corporate category. Historical financial results for the Individual Life and Retirement Plans businesses sold in the first quarter of 2013 have been reported in the Talcott Resolution reporting segment.

The Company's reporting segments, as well as the Corporate category, are as follows:

Property & Casualty Commercial

Property & Casualty Commercial provides workers' compensation, property, automobile, marine, livestock, liability and umbrella coverages primarily throughout the United States ("U.S."), along with a variety of customized insurance products and risk management services including professional liability, fidelity, surety, and specialty casualty coverages.

Consumer Markets

Consumer Markets provides standard automobile, homeowners and home-based business coverages to individuals across the U.S., including a special program designed exclusively for members of AARP. Consumer Markets also operates a member contact center for health insurance products offered through the AARP Health program.

Property & Casualty Other Operations

Property & Casualty Other Operations includes certain property and casualty operations, currently managed by the Company, that have discontinued writing new business and substantially all of the Company's asbestos and environmental exposures.

Group Benefits

Group Benefits provides employers, associations, affinity groups and financial institutions with group life, accident and disability coverage, along with other products and services, including voluntary benefits, and group retiree health.

Mutual Funds

Mutual Funds offers mutual funds for retail accounts such as retirement plans and 529 college savings plans and provides investment-management and administrative services such as product design, implementation and oversight.

Talcott Resolution

Talcott Resolution is comprised of runoff business from the Company's U.S. annuity, international (primarily in Japan) annuity, institutional and private-placement life insurance businesses, as well as the Retirement Plans and Individual Life businesses that were sold in the first quarter of 2013 and the Company's discontinued U.K. variable annuity business. For information regarding the sale of the Retirement Plans and Individual Life businesses and the discontinued U.K variable annuity business, see Note 2 - Business Dispositions and Note 14 - Discontinued Operations, respectively, of Notes to Condensed Consolidated Financial Statements.

Corporate

The Company includes in the Corporate category the Company's debt financing and related interest expense, as well as other capital raising activities; and certain purchase accounting adjustments and other charges not allocated to the segments.

Financial Measures and Other Segment Information

Certain transactions between segments occur during the year that primarily relate to tax settlements, insurance coverage, expense reimbursements, services provided, security transfers and capital contributions. Also, one segment may purchase group annuity contracts from another to fund pension costs and annuities to settle casualty claims. In addition, certain inter-segment transactions occur that relate to interest income on allocated surplus. Consolidated net investment income is unaffected by such transactions.

The following table presents net income (loss) for each reporting segment, as well as the Corporate category.

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

5. Fair Value Measurements

The following section applies the fair value hierarchy and disclosure requirements for the Company's financial instruments that are carried at fair value. The fair value hierarchy prioritizes the inputs in the valuation techniques used to measure fair value into three broad Levels (Level 1, 2 or 3).

Level 1 Observable inputs that reflect quoted prices for identical assets or liabilities in active markets that the Company has the ability to access at the measurement date. Level 1 securities include highly liquid U.S. Treasuries, money market funds and exchange traded equity securities, open-ended mutual funds reported in separate account assets and exchange-traded derivative instruments.

Level 2 Observable inputs, other than quoted prices included in Level 1, for the asset or liability or prices for similar assets and liabilities. Most fixed maturities and preferred stocks, including those reported in separate account assets, are model priced by vendors using observable inputs and are classified within Level 2. Also included are limited partnerships and other alternative assets measured at fair value where an investment can be redeemed, or substantially redeemed, at the NAV at the measurement date or in the near-term, not to exceed 90 days.

Level 3 Valuations that are derived from techniques in which one or more of the significant inputs are unobservable (including assumptions about risk). Level 3 securities include less liquid securities, guaranteed product embedded and reinsurance derivatives and other complex derivative instruments, as well as limited partnerships and other alternative investments carried at fair value that cannot be redeemed in the near-term at the NAV. Because Level 3 fair values, by their nature, contain one or more significant unobservable inputs as there is little or no observable market for these assets and liabilities, considerable judgment is used to determine the Level 3 fair values. Level 3 fair values represent the Company's best estimate of an amount that could be realized in a current market exchange absent actual market exchanges.

In many situations, inputs used to measure the fair value of an asset or liability position may fall into different levels of the fair value hierarchy. In these situations, the Company will determine the level in which the fair value falls based upon the lowest level input that is significant to the determination of the fair value. Transfers of securities among the levels occur at the beginning of the reporting period. The amount of transfers from Level 1 to Level 2 was \$443 and \$909, respectively, for the three and nine months ended September 30, 2013, and \$1,080 and \$1,999 for the three and nine months ended September 30, 2012, which represented previously on-the-run U.S. Treasury securities that are now off-the-run, and there were no transfers from Level 2 to Level 1. In most cases, both observable (e.g., changes in interest rates) and unobservable (e.g., changes in risk assumptions) inputs are used in the determination of fair values that the Company has classified within Level 3. Consequently, these values and the related gains and losses are based upon both observable and unobservable inputs. The Company's fixed maturities included in Level 3 are classified as such because these securities are primarily priced by independent brokers and/or within illiquid markets.

The following tables present assets and (liabilities) carried at fair value by hierarchy level. These disclosures provide information as to the extent to which the Company uses fair value to measure financial instruments and information about the inputs used to value those financial instruments to allow users to assess the relative reliability of the measurements.

[1] Includes over-the-counter("OTC") and OTC-cleared derivative instruments in a net asset value position after consideration of the impact of collateral posting requirements which may be imposed by agreements, clearing house rules and applicable law. As of September 30, 2013 and December 31, 2012, \$128 and \$160, respectively, of cash collateral liability was netted against the derivative asset value in the Condensed Consolidated Balance Sheet and is excluded from the table above. See footnote 4 below for derivative liabilities.

[2] Represents hedge funds where investment company accounting has been applied to a wholly-owned fund of funds measured at fair value.

[3] Approximately \$3.4 billion and \$3.1 billion of investment sales receivable that are not subject to fair value accounting are excluded as of September 30, 2013 and December 31, 2012, respectively.

[4] Includes OTC and OTC-cleared derivative instruments in a net negative market value position (derivative liability).

[5] In the Level 3 roll-forward table included below in this Note 4, the derivative asset and liability are referred to as "freestanding derivatives" and are presented on a net basis.

[6] Represents embedded derivatives associated with non-funding agreement-backed consumer equity linked notes.

Determination of Fair Values

The valuation methodologies used to determine the fair values of assets and liabilities under the "exit price" notion, reflect market-participant objectives and are based on the application of the fair value hierarchy that prioritizes relevant observable market inputs over unobservable inputs. The Company determines the fair values of certain financial assets and financial liabilities based on quoted market prices where available and where prices represent a reasonable estimate of fair value. The Company also determines fair value based on future cash flows discounted at

the appropriate current market rate. Fair values reflect adjustments for counterparty credit quality, the Company's default spreads, liquidity and, where appropriate, risk margins on unobservable parameters. The following is a discussion of the methodologies used to determine fair values for the financial instruments listed in the above tables. The fair value process is monitored by the Valuation Committee, which is a cross-functional group of senior management within the Company that meets at least quarterly. The Valuation Committee is co-chaired by the Heads of Investment Operations and Accounting and has representation from various investment sector professionals, accounting, operations, legal, compliance and risk management. The purpose of the committee is to oversee the pricing policy and procedures by ensuring objective and reliable valuation practices and pricing of financial instruments, as well as addressing fair valuation issues and approving changes to valuation methodologies and pricing sources.

Table of Contents

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

5. Fair Value Measurements (continued)

There is also a Fair Value Working Group (“Working Group”) which includes the Heads of Investment Operations and Accounting, as well as other investment, operations, accounting and risk management professionals that meet monthly to review market data trends, pricing and trading statistics and results, and any proposed pricing methodology changes. The Working Group performs ongoing analysis of the prices and credit spreads received from third parties to ensure that the prices represent a reasonable estimate of the fair value. This process involves quantitative and qualitative analysis and is overseen by investment and accounting professionals. As a part of this analysis, the Company considers trading volume, new issuance activity and other factors to determine whether the market activity is significantly different than normal activity in an active market, and if so, whether transactions may not be orderly considering the weight of available evidence. If the available evidence indicates that pricing is based upon transactions that are stale or not orderly, the Company places little, if any, weight on the transaction price and will estimate fair value utilizing an internal pricing model. In addition, the Company ensures that prices received from independent brokers represent a reasonable estimate of fair value through the use of internal and external cash flow models developed based on spreads, and when available, market indices. As a result of this analysis, if the Company determines that there is a more appropriate fair value based upon the available market data, the price received from the third party is adjusted accordingly and approved by the Valuation Committee.

AFS Securities, Fixed Maturities, FVO, Equity Securities, Trading, and Short-term Investments

The fair value of AFS securities, fixed maturities, FVO, equity securities, trading, and short-term investments in an active and orderly market (e.g. not distressed or forced liquidation) are determined by management after considering one of three primary sources of information: third-party pricing services, independent broker quotations or pricing matrices. Security pricing is applied using a “waterfall” approach whereby publicly available prices are first sought from third-party pricing services, the remaining unpriced securities are submitted to independent brokers for prices, or lastly, securities are priced using a pricing matrix. Typical inputs used by these pricing methods include, but are not limited to, reported trades, benchmark yields, issuer spreads, bids, offers, and/or estimated cash flows, prepayments speeds and default rates. Based on the typical trading volumes and the lack of quoted market prices for fixed maturities, third-party pricing services will normally derive the security prices from recent reported trades for identical or similar securities making adjustments through the reporting date based upon available market observable information as outlined above. If there are no recently reported trades, the third-party pricing services and independent brokers may use matrix or model processes to develop a security price where future cash flow expectations are developed based upon collateral performance and discounted at an estimated market rate. Included in the pricing of ABS and RMBS are estimates of the rate of future prepayments of principal over the remaining life of the securities. Such estimates are derived based on the characteristics of the underlying structure and prepayment speeds previously experienced at the interest rate levels projected for the underlying collateral. Actual prepayment experience may vary from these estimates.

Prices from third-party pricing services are often unavailable for securities that are rarely traded or are traded only in privately negotiated transactions. As a result, certain securities are priced via independent broker quotations which utilize inputs that may be difficult to corroborate with observable market based data. Additionally, the majority of these independent broker quotations are non-binding.

The Company’s internal pricing model utilizes the Company’s best estimate of expected future cash flows discounted at a rate of return that a market participant would require. The significant inputs to the model include, but are not limited to, current market inputs, such as credit loss assumptions, estimated prepayment speeds and market risk premiums. A pricing matrix is used to price private placement securities for which the Company is unable to obtain a price from a third-party pricing service by discounting the expected future cash flows from the security by a developed market discount rate utilizing current credit spreads. Credit spreads are developed each month using market based data for public securities adjusted for credit spread differentials between public and private securities which are obtained from a survey of multiple private placement brokers. The appropriate credit spreads determined through this survey

approach are based upon the issuer's financial strength and term to maturity, utilizing an independent public security index and trade information and adjusting for the non-public nature of the securities.

The Company conducts other specific activities to monitor controls around pricing. Daily analyses identify price changes over 3-5%, sale trade prices that differ over 3% from the prior day's price and purchase trade prices that differ more than 3% from the current day's price. Weekly analyses identify prices that differ more than 5% from published bond prices of a corporate bond index. Monthly analyses identify price changes over 3%, prices that haven't changed and missing prices. Also on a monthly basis, a second source validation is performed on most sectors. Analyses are conducted by a dedicated pricing unit that follows up with trading and investment sector professionals and challenges prices with vendors when the estimated assumptions used differ from what the Company feels a market participant would use. Any changes from the identified pricing source are verified by further confirmation of assumptions used. Examples of other procedures performed include, but are not limited to, initial and on-going review of third-party pricing services' methodologies, review of pricing statistics and trends and back testing recent trades.

Table of Contents

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

5. Fair Value Measurements (continued)

The Company has analyzed the third-party pricing services' valuation methodologies and related inputs, and has also evaluated the various types of securities in its investment portfolio to determine an appropriate fair value hierarchy level based upon trading activity and the observability of market inputs. Most prices provided by third-party pricing services are classified into Level 2 because the inputs used in pricing the securities are market observable. Due to a general lack of transparency in the process that brokers use to develop prices, most valuations that are based on brokers' prices are classified as Level 3. Some valuations may be classified as Level 2 if the price can be corroborated with observable market data.

Derivative Instruments, including embedded derivatives within investments

Derivative instruments are fair valued using pricing valuation models for OTC and OTC-cleared derivatives that utilize independent market data inputs, quoted market prices for exchange-traded derivatives, or independent broker quotations. Excluding embedded and reinsurance related derivatives, as of September 30, 2013 and December 31, 2012, 97% and 97%, respectively, of derivatives, based upon notional values, were priced by valuation models or quoted market prices. The remaining derivatives were priced by broker quotations.

The Company performs various controls on derivative valuations which include both quantitative and qualitative analysis. Analyses are conducted by a dedicated derivative pricing team that works directly with investment sector professionals to analyze impacts of changes in the market environment and investigate variances. There is a monthly analysis to identify market value changes greater than pre-defined thresholds, stale prices, missing prices and zero prices. Also on a monthly basis, a second source validation, typically to broker quotations, is performed for certain of the more complex derivatives, as well as for all new deals during the month. A model validation review is performed on any new models, which typically includes detailed documentation and validation to a second source. The model validation documentation and results of validation are presented to the Valuation Committee for approval. There is a monthly control to review changes in pricing sources to ensure that new models are not moved to production until formally approved.

The Company utilizes derivative instruments to manage the risk associated with certain assets and liabilities.

However, the derivative instrument may not be classified with the same fair value hierarchy level as the associated assets and liabilities. Therefore the realized and unrealized gains and losses on derivatives reported in Level 3 may not reflect the offsetting impact of the realized and unrealized gains and losses of the associated assets and liabilities.

Limited partnerships and other alternative investments

Limited partnerships and other alternative investments include hedge funds where investment company accounting has been applied to a wholly-owned fund of funds measured at fair value. These funds are fair valued using the net asset value per share or equivalent ("NAV"), as a practical expedient, calculated on a monthly basis and is the amount at which a unit or shareholder may redeem their investment, if redemption is allowed. Certain impediments to redemption include, but are not limited to the following: 1) redemption notice periods vary and may be as long as 90 days, 2) redemption may be restricted (e.g. only be allowed on a quarter-end), 3) a holding period referred to as a lock-up may be imposed whereby an investor must hold their investment for a specified period of time before they can make a notice for redemption, 4) gating provisions may limit all redemptions in a given period to a percentage of the entities' equity interests, or may only allow an investor to redeem a portion of their investment at one time and 5) early redemption penalties may be imposed that are expressed as a percentage of the amount redeemed. The Company will assess impediments to redemption and current market conditions that will restrict the redemption at the end of the notice period. Any funds that are subject to significant liquidity restrictions are reported in Level 3; all others are classified as Level 2.

5. Fair Value Measurements (continued)

Valuation Techniques and Inputs for Investments

Generally, the Company determines the estimated fair value of its AFS securities, fixed maturities, FVO, equity securities, trading, and short-term investments using the market approach. The income approach is used for securities priced using a pricing matrix, as well as for derivative instruments. Certain limited partnerships and other alternative investments are measured at fair value using a NAV as a practical expedient. For Level 1 investments, which are comprised of on-the-run U.S. Treasuries, exchange-traded equity securities, short-term investments, and exchange traded futures and option contracts, valuations are based on observable inputs that reflect quoted prices for identical assets in active markets that the Company has the ability to access at the measurement date.

For most of the Company's debt securities, the following inputs are typically used in the Company's pricing methods: reported trades, benchmark yields, bids and/or estimated cash flows. For securities except U.S. Treasuries, inputs also include issuer spreads, which may consider credit default swaps. Derivative instruments are valued using mid-market inputs that are predominantly observable in the market.

A description of additional inputs used in the Company's Level 2 and Level 3 measurements is listed below:

Level 2 The fair values of most of the Company's Level 2 investments are determined by management after considering prices received from third party pricing services. These investments include most fixed maturities and preferred stocks, including those reported in separate account assets, as well as certain limited partnerships and other alternative investments and derivative instruments.

ABS, CDOs, CMBS and RMBS – Primary inputs also include monthly payment information, collateral performance, which varies by vintage year and includes delinquency rates, collateral valuation loss severity rates, collateral refinancing assumptions, credit default swap indices and, for ABS and RMBS, estimated prepayment rates.

Corporates, including investment grade private placements – Primary inputs also include observations of credit default swap curves related to the issuer.

Foreign government/government agencies—Primary inputs also include observations of credit default swap curves related to the issuer and political events in emerging markets.

Municipals – Primary inputs also include Municipal Securities Rulemaking Board reported trades and material event notices, and issuer financial statements.

Short-term investments – Primary inputs also include material event notices and new issue money market rates.

Equity securities, trading – Consist of investments in mutual funds. Primary inputs include net asset values obtained from third party pricing services.

Credit derivatives – Primary inputs include the swap yield curve and credit default swap curves.

Foreign exchange derivatives – Primary inputs include the swap yield curve, currency spot and forward rates, and cross currency basis curves.

Interest rate derivatives – Primary input is the swap yield curve.

Limited partnerships and other alternative investments — Primary inputs include a NAV for investment companies with no redemption restrictions as reported on their U.S. GAAP financial statements.

Level 3 Most of the Company's securities classified as Level 3 include less liquid securities such as lower quality ABS, CMBS, commercial real estate ("CRE") CDOs and RMBS primarily backed by below-prime loans. Securities included in level 3 are primarily valued based on broker prices or broker spreads, without adjustments.

Primary inputs for non-broker priced investments, including structured securities, are consistent with the typical inputs used in Level 2 measurements noted above, but are Level 3 due to their less liquid markets.

Additionally, certain long-dated securities are priced based on third party pricing services, including municipal securities, foreign government/government agencies, bank loans and below investment grade private placement securities. Primary inputs for these long-dated securities are consistent with the typical inputs used in Level 1 and Level 2 measurements noted above, but include benchmark interest rate or credit spread assumptions that are not observable in the marketplace. Level 3 investments also include certain limited

partnerships and other alternative investments measured at fair value where the Company does not have the ability to redeem the investment in the near-term at the NAV. Also included in Level 3 are certain derivative instruments that either have significant unobservable inputs or are valued based on broker quotations. Significant inputs for these derivative contracts primarily include the typical inputs used in the Level 1 and Level 2 measurements noted above; but also include equity and interest rate volatility and swap yield curves beyond observable limits.

[1]

Conversely, the impact of a decrease in input would have the opposite impact to the fair value as that presented in the table. Changes are based on long positions, unless otherwise noted. Changes in fair value will be inversely impacted for short positions.

Securities and derivatives for which the Company bases fair value on broker quotations predominately include ABS, CDOs, corporate, fixed maturities, FVO and certain credit derivatives. Due to the lack of transparency in the process brokers use to develop prices for these investments, the Company does not have access to the significant unobservable inputs brokers use to price these securities and derivatives. The Company believes however, the types of inputs brokers may use would likely be similar to those used to price securities and derivatives for which inputs are available to the Company, and therefore may include, but not be limited to, loss severity rates, constant prepayment rates, constant default rates and counterparty credit spreads. Therefore, similar to non broker priced securities and derivatives, generally, increases in these inputs would cause fair values to decrease. For the three and nine months ended September 30, 2013, no significant adjustments were made by the Company to broker prices received. As of September 30, 2013 and December 31, 2012, excluded from the tables above are limited partnerships and other alternative investments which total \$336 and \$314, respectively, of level 3 assets measured at fair value. The predominant valuation method uses a NAV calculated on a monthly basis and represents funds where the Company does not have the ability to redeem the investment in the near-term at that NAV, including an assessment of the investee's liquidity.

Table of Contents

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

5. Fair Value Measurements (continued)

Product Derivatives

The Company formerly offered certain variable annuity products with GMWB riders in the U.S., the U.K., and Japan. The GMWB represents an embedded derivative in the variable annuity contract. When it is determined that (1) the embedded derivative possesses economic characteristics that are not clearly and closely related to the economic characteristics of the host contract, and (2) a separate instrument with the same terms would qualify as a derivative instrument, the embedded derivative is bifurcated from the host for measurement purposes. The embedded derivative is carried at fair value, with changes in fair value reported in net realized capital gains and losses. The Company's GMWB liability is reported in other policyholder funds and benefits payable in the Condensed Consolidated Balance Sheets.

In valuing the embedded derivative, the Company attributes to the derivative a portion of the expected fees to be collected over the expected life of the contract from the contract holder equal to the present value of future GMWB claims (the "Attributed Fees"). The excess of fees collected from the contract holder in the current period over the current period's Attributed Fees are associated with the host variable annuity contract and reported in fee income.

U.S. GMWB Reinsurance Derivative

The Company has reinsurance arrangements in place to transfer a portion of its risk of loss due to GMWB. These arrangements are recognized as derivatives and carried at fair value in reinsurance recoverables. Changes in the fair value of the reinsurance agreements are reported in net realized capital gains and losses.

The fair value of the U.S. GMWB reinsurance derivative is calculated as an aggregation of the components described in the Living Benefits Required to be Fair Valued discussion below and is modeled using significant unobservable inputs, as well as policyholder behavior inputs, identical to those used in calculating the underlying liability, such as lapses, fund selection, resets and withdrawal utilization and risk margins.

Living Benefits Required to be Fair Valued (in Other Policyholder Funds and Benefits Payable)

Living benefits required to be fair valued include U.S. GMWB, international GMWB and international other guaranteed living benefits. Fair values for GMWB and guaranteed minimum accumulation benefit ("GMAB") contracts are calculated using the income approach based upon internally developed models because active, observable markets do not exist for those items. The fair value of the Company's guaranteed benefit liabilities, classified as embedded derivatives, and the related reinsurance and customized freestanding derivatives is calculated as an aggregation of the following components: Best Estimate Claim Payments; Credit Standing Adjustment; and Margins. The resulting aggregation is reconciled or calibrated, if necessary, to market information that is, or may be, available to the Company, but may not be observable by other market participants, including reinsurance discussions and transactions. The Company believes the aggregation of these components, as necessary and as reconciled or calibrated to the market information available to the Company, results in an amount that the Company would be required to transfer or receive, for an asset, to or from market participants in an active liquid market, if one existed, for those market participants to assume the risks associated with the guaranteed minimum benefits and the related reinsurance and customized derivatives. The fair value is likely to materially diverge from the ultimate settlement of the liability as the Company believes settlement will be based on our best estimate assumptions rather than those best estimate assumptions plus risk margins. In the absence of any transfer of the guaranteed benefit liability to a third party, the release of risk margins is likely to be reflected as realized gains in future periods' net income. Each component described below is unobservable in the marketplace and require subjectivity by the Company in determining their value.

Oversight of the Company's valuation policies and processes for product and U.S. GMWB reinsurance derivatives is performed by a multidisciplinary group comprised of finance, actuarial and risk management professionals. This multidisciplinary group reviews and approves changes and enhancements to the Company's valuation model as well as associated controls.

5. Fair Value Measurements (continued)

Best Estimate

Claim Payments

The Best Estimate Claim Payments is calculated based on actuarial and capital market assumptions related to projected cash flows, including the present value of benefits and related contract charges, over the lives of the contracts, incorporating expectations concerning policyholder behavior such as lapses, fund selection, resets and withdrawal utilization. For the customized derivatives, policyholder behavior is prescribed in the derivative contract. Because of the dynamic and complex nature of these cash flows, best estimate assumptions and a Monte Carlo stochastic process is used in valuation. The Monte Carlo stochastic process involves the generation of thousands of scenarios that assume risk neutral returns consistent with swap rates and a blend of observable implied index volatility levels. Estimating these cash flows involves numerous estimates and subjective judgments regarding a number of variables –including expected market rates of return, market volatility, correlations of market index returns to funds, fund performance, discount rates and assumptions about policyholder behavior which emerge over time.

At each valuation date, the Company assumes expected returns based on:

- risk-free rates as represented by the euro dollar futures, LIBOR deposits and swap rates to derive forward curve rates;
- market implied volatility assumptions for each underlying index based primarily on a blend of observed market “implied volatility” data;
- correlations of historical returns across underlying well known market indices based on actual observed returns over the ten years preceding the valuation date; and
- three years of history for fund indexes compared to separate account fund regression.

On a daily basis, the Company updates capital market assumptions used in the GMWB liability model such as interest rates, equity indices and the blend of implied equity index volatilities. The Company monitors various aspects of policyholder behavior and may modify certain of its assumptions, including living benefit lapses and withdrawal rates, if credible emerging data indicates that changes are warranted. In addition, the Company will continue to evaluate policyholder behavior assumptions as we implemented initiatives to reduce the size of the variable annuity business. At a minimum, all policyholder behavior assumptions are reviewed and updated, as appropriate, in conjunction with the completion of the Company’s comprehensive study to refine its estimate of future gross profits during the third quarter of each year.

Credit Standing Adjustment

This assumption makes an adjustment that market participants would make, in determining fair value, to reflect the risk that guaranteed benefit obligations or the GMWB reinsurance recoverables will not be fulfilled (“nonperformance risk”). The Company incorporates a blend of observable Company and reinsurer credit default spreads from capital markets, adjusted for market recoverability. The credit standing adjustment assumption, net of reinsurance, resulted in pre-tax realized gains/(losses) of \$0 and \$(31), for the three months ended September 30, 2013 and 2012, respectively, and \$13 and \$(64) for the nine months ended September 30, 2013 and 2012, respectively. As of September 30, 2013 and December 31, 2012 the credit standing adjustment was \$1 and \$(12), respectively.

Margins

The behavior risk margin adds a margin that market participants would require, in determining fair value, for the risk that the Company’s assumptions about policyholder behavior could differ from actual experience. The behavior risk margin is calculated by taking the difference between adverse policyholder behavior assumptions and best estimate assumptions.

Assumption updates, including policyholder behavior assumptions, affected best estimates and margins for total pre-tax realized gains of \$75 and \$301 for the three and nine months ended September 30, 2013 and 2012. As of September 30, 2013 and December 31, 2012 the behavior risk margin was \$137 and \$302, respectively.

In addition to the non-market-based updates described above, the Company recognized non-market-based updates driven by the relative outperformance (underperformance) of the underlying actively managed funds as compared to

their respective indices resulting in pre-tax realized gains/(losses) of approximately \$22 and \$25, for the three months ended September 30, 2013 and 2012, respectively and \$29 and \$34 for the nine months ended September 30, 2013 and 2012, respectively.

5. Fair Value Measurements (continued)

Significant unobservable inputs used in the fair value measurement of living benefits required to be fair valued and the U.S. GMWB reinsurance derivative are withdrawal utilization and withdrawal rates, lapse rates, reset elections and equity volatility. The following table provides quantitative information about the significant unobservable inputs and is applicable to all of the Living Benefits Required to be Fair Valued and the U.S. GMWB Reinsurance Derivative. Significant increases in any of the significant unobservable inputs, in isolation, will generally have an increase or decrease correlation with the fair value measurement, as shown in the table.

Significant Unobservable Input	Unobservable Inputs (Minimum)	Unobservable Inputs (Maximum)	Impact of Increase in Input on Fair Value Measurement [1]
Withdrawal Utilization[2]	20%	100%	Increase
Withdrawal Rates [2]	—%	8%	Increase
Lapse Rates [3]	—%	75%	Decrease
Reset Elections [4]	20%	75%	Increase
Equity Volatility [5]	10%	50%	Increase

[1] Conversely, the impact of a decrease in input would have the opposite impact to the fair value as that presented in the table.

[2] Ranges represent assumed cumulative percentages of policyholders taking withdrawals and the annual amounts withdrawn.

[3] Range represents assumed annual percentages of full surrender of the underlying variable annuity contracts across all policy durations for in force business.

[4] Range represents assumed cumulative percentages of policyholders that would elect to reset their guaranteed benefit base.

[5] Range represents implied market volatilities for equity indices based on multiple pricing sources.

Generally, a change in withdrawal utilization assumptions would be accompanied by a directionally opposite change in lapse rate assumptions, as the behavior of policyholders that utilize GMWB or GMAB riders is typically different from policyholders that do not utilize these riders.

Separate Account Assets

Separate account assets are primarily invested in mutual funds. Other separate account assets include fixed maturities, limited partnerships, equity securities, short-term investments and derivatives that are valued in the same manner, and using the same pricing sources and inputs, as those investments held by the Company. Separate account assets classified as Level 3 primarily include limited partnerships in which fair value represents the separate account's share of the fair value of the equity in the investment ("net asset value") and are classified in level 3 based on the Company's ability to redeem its investment.

Assets and Liabilities Measured at Fair Value on a Recurring Basis Using Significant Unobservable Inputs (Level 3)

The tables below provide fair value roll-forwards for the three and nine months ended September 30, 2013 and 2012, for the financial instruments classified as Level 3.

For the three months ended September 30, 2013

Assets	Fixed Maturities, AFS							Total Fixed Maturities, AFS	Fixed Maturities, FVO

[2] [7]

The Company classifies gains and losses on GMWB reinsurance derivatives and Guaranteed Living Benefit [1] embedded derivatives as unrealized gains (losses) for purposes of disclosure in this table because it is impracticable to track on a contract-by-contract basis the realized gains (losses) for these derivatives and embedded derivatives.

All amounts in these rows are reported in net realized capital gains/losses. The realized/unrealized gains (losses) included in net income for separate account assets are offset by an equal amount for separate account liabilities, [2] which results in a net zero impact on net income for the Company. All amounts are before income taxes and amortization DAC.

[3] All amounts are before income taxes and amortization of DAC.

[4] Transfers in and/or (out) of Level 3 are primarily attributable to the availability of market observable information and the re-evaluation of the observability of pricing inputs.

[5] Derivative instruments are reported in this table on a net basis for asset/(liability) positions and reported in the Condensed Consolidated Balance Sheet in other investments and other liabilities.

[6] Includes both market and non-market impacts in deriving realized and unrealized gains (losses).

[7] Amounts presented are for Level 3 only and therefore may not agree to other disclosures included herein.

Fair Value Option

The Company holds fair value option investments that contain an embedded credit derivative with underlying credit risk primarily related to corporate bonds and commercial real estate. Also included are foreign government securities that align with the accounting for yen-based fixed annuity liabilities, which are adjusted for changes in spot rates through realized gains and losses. Similar to other fixed maturities, income earned from FVO securities is recorded in net investment income and changes in fair value are recorded in net realized capital gains and losses.

The Company elected the fair value option for consolidated VIE investment funds that were established in 2012. The Company elected the fair value option in order to report investments of consolidated investment companies at fair value with changes in the fair value of these securities recognized in net realized capital gains and losses, which is consistent with accounting requirements for investment companies. The investment funds hold fixed income securities and the Company has management and control of the funds as well as a significant ownership interest.

The following table presents the changes in fair value of those assets and liabilities accounted for using the fair value option reported in net realized capital gains and losses in the Company's Condensed Consolidated Statements of Operations.

Financial Instruments Not Carried at Fair Value

The following table presents carrying amounts and fair values of the Company's financial instruments not carried at fair value and not included in the above fair value discussion.

	Fair Value Hierarchy Level	September 30, 2013		December 31, 2012	
		Carrying Amount	Fair Value	Carrying Amount	Fair Value
Assets					
Policy loans	Level 3	\$1,415	\$1,483	\$1,997	\$2,165
Mortgage loans	Level 3	5,575	5,616	6,711	6,933
Liabilities					
Other policyholder funds and benefits payable [1]	Level 3	\$9,426	\$9,636	\$9,558	\$9,910
Senior notes [2]	Level 2	5,206	5,863	5,706	7,071
Junior subordinated debentures [2]	Level 2	1,100	1,242	1,100	1,265
Consumer notes [3]	Level 3	82	82	159	159

[1] Excludes guarantees on variable annuities, group accident and health and universal life insurance contracts, including corporate owned life insurance.

[2] Included in debt in the Condensed Consolidated Balance Sheets.

[3] Excludes amounts carried at fair value and included in disclosures above.

The Company has not made any changes in its valuation methodologies for the following assets and liabilities since December 31, 2012.

Fair value for policy loans and consumer notes were estimated using discounted cash flow calculations using current interest rates adjusted for estimated loan durations.

Fair values for mortgage loans were estimated using discounted cash flow calculations based on current lending rates for similar type loans. Current lending rates reflect changes in credit spreads and the remaining terms of the loans.

Fair values for other policyholder funds and benefits payable, not carried at fair value, are estimated based on the cash surrender values of the underlying policies or by estimating future cash flows discounted at current interest rates adjusted for credit risk.

Fair values for senior notes and junior subordinated debentures are determined using the market approach based on reported trades, benchmark interest rates and issuer spread for the Company which may consider credit default swaps.

[1] Includes \$1.5 billion of gains relating to the sales of the Retirement Plans and Individual Life businesses for the nine months ended September 30, 2013.

Relates to the Japanese fixed annuity product (adjustment of product liability for changes in spot currency

[2] exchange rates, related derivative hedging instruments, excluding net periodic coupon settlements, and Japan FVO securities).

Primarily consists of transactional foreign currency re-valuation associated with the internal reinsurance of the

[3] Japan variable annuity business, which is offset in AOCI, and change in value of non-qualifying derivatives.

[3] Includes \$71 of gains relating to the sales of the Retirement Plans and Individual Life businesses for the nine months ended September 30, 2013.

Net realized capital gains and losses from investment sales, after deducting the life and pension policyholders' share for certain products, are reported as a component of revenues and are determined on a specific identification basis. Before tax, net gains and losses on sales and impairments previously reported as unrealized gains in AOCI were \$(59) and \$1.6 billion, respectively, for the three and nine months ended September 30, 2013 and \$26 and \$116 for the three and nine months ended September 30, 2012, respectively. Proceeds from sales of AFS securities totaled \$6.1 billion and \$25.5 billion, respectively, for the three and nine months ended September 30, 2013 and \$10.8 billion and \$34.2 billion for the three and nine months ended September 30, 2012, respectively.

Represents the amount of cumulative non-credit OTTI losses recognized in OCI on securities that also had credit [1] impairments. These losses are included in gross unrealized losses as of September 30, 2013 and December 31, 2012.

[2] Gross unrealized gains (losses) exclude the change in fair value of bifurcated embedded derivative features of certain securities. Changes in fair value are recorded in net realized capital gains (losses).

As of December 31, 2012, includes fixed maturities, AFS and equity securities, AFS relating to the sales of the [3] Retirement Plans and Individual Life Businesses; see Note 2 - Business Dispositions of the Notes to Condensed Consolidated Financial Statements for further discussion of this transaction.

The following table presents the Company's fixed maturities, AFS, by contractual maturity year.

Contractual Maturity	September 30, 2013	
	Amortized Cost	Fair Value
One year or less	\$2,111	\$2,146
Over one year through five years	11,317	11,856
Over five years through ten years	11,870	12,263
Over ten years	22,564	23,271
Subtotal	47,862	49,536
Mortgage-backed and asset-backed securities	14,365	14,487
Total fixed maturities, AFS	\$62,227	\$64,023

Estimated maturities may differ from contractual maturities due to security call or prepayment provisions. Due to the potential for variability in payment speeds (i.e. prepayments or extensions), mortgage-backed and asset-backed

securities are not categorized by contractual maturity.

Unrealized losses exclude the change in fair value of bifurcated embedded derivative features of certain securities.

[1] Changes in fair value are recorded in net realized capital gains (losses).

As of September 30, 2013, AFS securities in an unrealized loss position, consisted of 3,290 securities, primarily related to floating rate corporate securities within the financial services sector, municipal, and foreign government and government agencies which are depressed due to an increase in interest rates since the securities were purchased. As

of September 30, 2013, 94% of these securities were depressed less than 20% of cost or amortized cost. The increase in unrealized losses during 2013 was primarily attributable to an increase in interest rates.

Table of Contents

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

6. Investments and Derivative Instruments (continued)

Most of the securities depressed for twelve months or more relate to structured securities with exposure to commercial and residential real estate, as well as certain floating rate corporate securities or securities with greater than 10 years to maturity, concentrated in the financial services sector. Current market spreads continue to be wider than spreads at the security's respective purchase date for structured securities with exposure to commercial and residential real estate largely due to the economic and market uncertainties regarding future performance of certain commercial and residential real estate backed securities. The majority of these securities have a floating-rate coupon referenced to a market index that has declined substantially. In addition, equity securities include investment grade perpetual preferred securities that contain "debt-like" characteristics where the decline in fair value is not attributable to issuer-specific credit deterioration, none of which have, nor are expected to, miss a periodic dividend payment. These securities have been depressed due to the securities' floating-rate coupon in the current low interest rate environment, general market credit spread widening since the date of purchase and the long-dated nature of the securities. The Company neither has an intention to sell nor does it expect to be required to sell the securities outlined above.

Mortgage Loans

	September 30, 2013			December 31, 2012		
	Amortized Cost [1]	Valuation Allowance	Carrying Value	Amortized Cost [1]	Valuation Allowance	Carrying Value
Total commercial mortgage loans [2]	\$5,642	\$(67)	\$5,575	\$6,779	\$(68)	\$6,711

[1] Amortized cost represents carrying value prior to valuation allowances, if any.

As of December 31, 2012, includes commercial mortgage loans relating to the sales of the Retirement Plans and [2] Individual Life businesses; see Note 2 - Business Dispositions of the Notes to Condensed Consolidated Financial Statements for further discussion of this transaction.

As of September 30, 2013 and December 31, 2012, the carrying value of mortgage loans associated with the valuation allowance was \$299 and \$291, respectively. Included in the table above are mortgage loans held-for-sale with a carrying value and valuation allowance of \$47 and \$3, respectively, as of September 30, 2013 and December 31, 2012. The carrying value of these loans is included in mortgage loans in the Company's Condensed Consolidated Balance Sheets. As of September 30, 2013, loans within the Company's mortgage loan portfolio that have had extensions or restructurings other than what is allowable under the original terms of the contract are immaterial. The following table presents the activity within the Company's valuation allowance for mortgage loans. These loans have been evaluated both individually and collectively for impairment. Loans evaluated collectively for impairment are immaterial.

	2013	2012
Balance, as of January 1	\$(68)	\$(102)
(Additions)/Reversals	(1)	1
Deductions	2	18
Balance, as of September 30	\$(67)	\$(83)

The current weighted-average LTV ratio of the Company's commercial mortgage loan portfolio was 61% as of September 30, 2013, while the weighted-average LTV ratio at origination of these loans was 63%. LTV ratios compare the loan amount to the value of the underlying property collateralizing the loan. The loan values are updated no less than annually through property level reviews of the portfolio. Factors considered in the property valuation include, but are not limited to, actual and expected property cash flows, geographic market data and capitalization rates. Debt service coverage ratios ("DSCR") compare a property's net operating income to the borrower's principal and interest payments. The current weighted average DSCR of the Company's commercial mortgage loan portfolio was 2.22x as of September 30, 2013. The Company held only two delinquent commercial mortgage loans past due by 90 days or more. The total carrying value and valuation allowance of these loans totaled \$4 and \$51, respectively, as of September 30, 2013, and are not accruing income.

The following table presents the carrying value of the Company's commercial mortgage loans by LTV and DSCR. Commercial Mortgage Loans Credit Quality

Loan-to-value	September 30, 2013		December 31, 2012	
	Carrying Value	Avg. Debt-Service Coverage Ratio	Carrying Value	Avg. Debt-Service Coverage Ratio

Variable Interest Entities

The Company is involved with various special purpose entities and other entities that are deemed to be VIEs primarily as a collateral manager and as an investor through normal investment activities, as well as a means of accessing capital. A VIE is an entity that either has investors that lack certain essential characteristics of a controlling financial interest or lacks sufficient funds to finance its own activities without financial support provided by other entities.

The Company performs ongoing qualitative assessments of its VIEs to determine whether the Company has a controlling financial interest in the VIE and therefore is the primary beneficiary. The Company is deemed to have a controlling financial interest when it has both the ability to direct the activities that most significantly impact the economic performance of the VIE and the obligation to absorb losses or right to receive benefits from the VIE that could potentially be significant to the VIE. Based on the Company's assessment, if it determines it is the primary beneficiary, the Company consolidates the VIE in the Company's Condensed Consolidated Financial Statements.

6. Investments and Derivative Instruments (continued)

Consolidated VIEs

The following table presents the carrying value of assets and liabilities, and the maximum exposure to loss relating to the VIEs for which the Company is the primary beneficiary. Creditors have no recourse against the Company in the event of default by these VIEs nor does the Company have any implied or unfunded commitments to these VIEs. The Company's financial or other support provided to these VIEs is limited to its investment management services and original investment.

	September 30, 2013			December 31, 2012		
	Total Assets	Total Liabilities [1]	Maximum Exposure to Loss [2]	Total Assets	Total Liabilities [1]	Maximum Exposure to Loss [2]
CDOs [3]	\$33	\$36	\$—	\$89	\$88	\$7
Investment funds [4]	157	—	166	163	—	162
Limited partnerships	4	—	4	6	1	5
Total	\$194	\$36	\$170	\$258	\$89	\$174

[1] Included in other liabilities in the Company's Condensed Consolidated Balance Sheets.

[2] The maximum exposure to loss represents the maximum loss amount that the Company could recognize as a reduction in net investment income or as a realized capital loss and is the cost basis of the Company's investment.

[3] Total assets included in fixed maturities, AFS, in the Company's Condensed Consolidated Balance Sheets.

[4] Total assets included in fixed maturities, FVO, short-term investments, and equity, AFS in the Company's Condensed Consolidated Balance Sheets.

CDOs represent structured investment vehicles for which the Company has a controlling financial interest as it provides collateral management services, earns a fee for those services and also holds investments in the securities issued by these vehicles. Investment funds represents wholly-owned fixed income funds established in 2012 for which the Company has exclusive management and control of this investment which is the activity that most significantly impacts its economic performance. Limited partnerships represent one hedge fund for which the Company holds a majority interest in the fund as an investment.

Non-Consolidated VIEs

The Company holds a significant variable interest for one VIE for which it is not the primary beneficiary and, therefore, was not consolidated on the Company's Condensed Consolidated Balance Sheets. This VIE represents a contingent capital facility ("facility") that has been held by the Company since February 2007 for which the Company has no implied or unfunded commitments. Assets and liabilities recorded for the facility were \$19 and \$18, respectively as of September 30, 2013 and \$23 and \$23, respectively, as of December 31, 2012. Additionally, the Company has a maximum exposure to loss of \$3 and \$3, respectively, as of September 30, 2013 and December 31, 2012, which represents the issuance costs that were incurred to establish the facility. The Company does not have a controlling financial interest as it does not manage the assets of the facility nor does it have the obligation to absorb losses or the right to receive benefits that could potentially be significant to the facility, as the asset manager has significant variable interest in the vehicle. The Company's financial or other support provided to the facility is limited to providing ongoing support to cover the facility's operating expenses. For further information on the facility, see Note 15 of Notes to Consolidated Financial Statements included in The Hartford's 2012 Form 10-K Annual Report. In addition, the Company, through normal investment activities, makes passive investments in structured securities issued by VIEs for which the Company is not the manager which are included in ABS, CDOs, CMBS and RMBS in the Available-for-Sale Securities table and fixed maturities, FVO, in the Company's Condensed Consolidated Balance Sheets. The Company has not provided financial or other support with respect to these investments other than its original investment. For these investments, the Company determined it is not the primary beneficiary due to the

relative size of the Company's investment in comparison to the principal amount of the structured securities issued by the VIEs, the level of credit subordination which reduces the Company's obligation to absorb losses or right to receive benefits and the Company's inability to direct the activities that most significantly impact the economic performance of the VIEs. The Company's maximum exposure to loss on these investments is limited to the amount of the Company's investment.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

6. Investments and Derivative Instruments (continued)

Repurchase Agreements and Dollar Roll Agreements

The Company enters into repurchase agreements and dollar roll transactions to manage liquidity or to earn incremental spread income. A repurchase agreement is a transaction in which one party (transferor) agrees to sell securities to another party (transferee) in return for cash (or securities), with a simultaneous agreement to repurchase the same securities at a specified price at a later date. A dollar roll is a type of repurchase transaction where a mortgage backed security is sold with an agreement to repurchase substantially the same security at a specified time in the future. These transactions are generally short-term in nature, and therefore, the carrying amounts of these instruments approximate fair value.

As part of repurchase agreements and dollar roll transactions, the Company transfers collateral of U.S. government and government agency securities and receives cash. For the repurchase agreements, the Company obtains cash in an amount equal to at least 95% of the fair value of the securities transferred. The agreements with third parties contain contractual provisions that require additional collateral to be transferred when necessary. The counterparty has the right to sell or re-pledge the securities transferred. The cash received from the repurchase program is typically invested in short-term investments or fixed maturities. The Company accounts for the repurchase agreements and dollar roll transactions as collateralized borrowings. The securities transferred under repurchase agreements and dollar roll transactions are included in fixed maturities, AFS with the obligation to repurchase those securities recorded in Other Liabilities on the Company's Condensed Consolidated Balance Sheets. The fair value of the securities transferred was \$977 and \$1.9 billion with a corresponding obligation to repurchase \$960 and \$1.9 billion as of September 30, 2013 and December 31, 2012, respectively.

The Company's repurchase agreements include master netting provisions that provide the counterparties the right to set off claims and apply securities held by them in respect of their obligations in the event of a default. The Company reported gross amounts of recognized liabilities of \$930 and \$923 in Other Liabilities on the Condensed Consolidated Balance sheets as of September 30, 2013 and December 31, 2012, respectively. These amounts represent the Company's obligations to repurchase securities under master netting agreements. The Company reported financial collateral pledged of \$946 and \$923 in fixed maturities, AFS on the Condensed Consolidated Balance sheets as of September 30, 2013 and December 31, 2012, respectively. The fixed maturities are predominantly U.S. government/government agency securities and are disallowed for offsetting under U.S. GAAP.

Derivative Instruments

The Company utilizes a variety of OTC, OTC-cleared and exchange traded derivative instruments as a part of its overall risk management strategy; as well as, to enter into replication transactions. Derivative instruments are used to manage risk associated with interest rate, equity market, credit spread, issuer default, price, and currency exchange rate risk or volatility. Replication transactions are used as an economical means to synthetically replicate the characteristics and performance of assets that would be permissible investments under the Company's investment policies. The Company also purchases and has previously issued financial instruments and products that either are accounted for as free-standing derivatives, such as certain reinsurance contracts, or may contain features that are deemed to be embedded derivative instruments, such as the GMWB rider included with certain variable annuity products.

Strategies that qualify for hedge accounting

Certain derivatives that the Company enters into satisfy the hedge accounting requirements as outlined in Note 1 - Basis of Presentation and Accounting Policies of Notes to Consolidated Financial Statements included in The Hartford's 2012 Form 10-K Annual Report. Typically, these hedge relationships include interest rate and foreign currency swaps where the terms or expected cash flows of the hedged item closely match the terms of the swap. The swaps are typically used to manage interest rate duration of certain fixed maturity securities or liability contracts, or to convert securities or liabilities denominated in a foreign currency to U.S. dollars. The hedge strategies by hedge accounting designation include:

Cash flow hedges

Interest rate swaps are predominantly used to manage portfolio duration and better match cash receipts from assets with cash disbursements required to fund liabilities. These derivatives convert interest receipts on floating-rate fixed maturity securities or interest payments on floating-rate guaranteed investment contracts to fixed rates. The Company also enters into forward starting swap agreements primarily to hedge interest rate risk inherent in the assumptions used to price certain liabilities. In addition, during the first quarter of 2013 the Company entered into a treasury lock contract to hedge the anticipated interest payments of a fixed rate debt issuance and was subsequently terminated upon the debt issuance.

Foreign currency swaps are used to convert foreign currency-denominated cash flows related to certain investment receipts and liability payments to U.S. dollars in order to reduce cash flow fluctuations due to changes in currency rates.

Table of Contents

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

6. Investments and Derivative Instruments (continued)

Fair value hedges

Interest rate swaps are used to hedge the changes in fair value of certain fixed rate liabilities and fixed maturity securities due to fluctuations in interest rates. Foreign currency swaps are used to hedge the changes in fair value of certain foreign currency-denominated fixed rate liabilities due to changes in foreign currency rates by swapping the fixed foreign payments to floating rate U.S. dollar denominated payments.

Non-qualifying strategies

Derivative relationships that do not qualify for hedge accounting or “non-qualifying strategies” primarily include the hedge programs for our U.S. and international variable annuity products; as well as, the hedging and replication strategies that utilize credit default swaps. In addition, hedges of interest rate and foreign currency risk of certain fixed maturities and liabilities do not qualify for hedge accounting. The non-qualifying strategies include:

Interest rate swaps, swaptions, caps, floors, and futures

The Company uses interest rate swaps, swaptions, caps, floors, and futures to manage duration between assets and liabilities in certain investment portfolios. In addition, the Company enters into interest rate swaps to terminate existing swaps, thereby offsetting the changes in value of the original swap going forward. As of September 30, 2013 and December 31, 2012 the notional amount of interest rate swaps in offsetting relationships was \$6.9 billion and \$7.5 billion, respectively.

Foreign currency swaps and forwards

The Company enters into foreign currency swaps and forwards to convert the foreign currency exposures of certain foreign currency-denominated fixed maturity investments to U.S. dollars.

Japan 3Win foreign currency swaps

The Company formerly offered certain variable annuity products with a guaranteed minimum income benefit ("GMIB") rider through a wholly-owned Japanese subsidiary. The GMIB rider is reinsured to a wholly-owned U.S. subsidiary which invests in U.S. dollar denominated assets to support the liability. The U.S. subsidiary entered into pay U.S. dollar, receive yen swap contracts to hedge the currency and yen interest rate exposure between the U.S. dollar denominated assets and the yen denominated fixed liability reinsurance payments.

Japanese fixed annuity hedging instruments

The Company formerly offered a yen denominated fixed annuity product through a wholly-owned Japanese subsidiary and reinsured to a wholly-owned U.S. subsidiary. The U.S. subsidiary invests in U.S. dollar denominated securities to support the yen denominated fixed liability payments and entered into currency rate swaps to hedge the foreign currency exchange rate and yen interest rate exposures that exist as a result of U.S. dollar assets backing the yen denominated liability.

Credit contracts

Credit default swaps are used to purchase credit protection on an individual entity or referenced index to economically hedge against default risk and credit-related changes in value on fixed maturity securities. Credit default swaps are also used to assume credit risk related to an individual entity, referenced index, or asset pool, as a part of replication transactions. These contracts require the Company to pay or receive a periodic fee in exchange for compensation from the counterparty should the referenced security issuers experience a credit event, as defined in the contract. The Company is also exposed to credit risk related to credit derivatives embedded within certain fixed maturity securities. These securities are primarily comprised of structured securities that contain credit derivatives that reference a standard index of corporate securities. In addition, the Company enters into credit default swaps to terminate existing credit default swaps, thereby offsetting the changes in value of the original swap going forward.

Equity index swaps and options

The Company formerly offered certain equity indexed products, which may contain an embedded derivative that requires bifurcation. The Company has entered into equity index swaps and options to economically hedge the equity volatility risk associated with these embedded derivatives. The Company also enters into equity index options and

futures with the purpose of hedging the impact of an adverse equity market environment on the investment portfolio.

6. Investments and Derivative Instruments (continued)

U.S. GMWB derivatives, net

The Company formerly offered certain variable annuity products with GMWB riders in the U.S. The GMWB product is a bifurcated embedded derivative ("U.S. GMWB product derivatives") that has a notional value equal to the guaranteed remaining balance ("GRB"). The Company uses reinsurance contracts to transfer a portion of its risk of loss due to U.S. GMWB. The reinsurance contracts covering U.S. GMWB ("U.S. GMWB reinsurance contracts") are accounted for as free-standing derivatives with a notional amount equal to the GRB amount.

The Company utilizes derivatives ("U.S. GMWB hedging instruments") as part of an actively managed program designed to hedge a portion of the capital market risk exposures of the un-reinsured GMWB riders due to changes in interest rates, equity market levels, and equity volatility. These derivatives include customized swaps, interest rate swaps and futures, and equity swaps, options and futures, on certain indices including the S&P 500 index, EAFE index and NASDAQ index.

The following table represents notional and fair value for U.S. GMWB hedging instruments.

	Notional Amount		Fair Value	
	September 30, 2013	December 31, 2012	September 30, 2013	December 31, 2012
Customized swaps	\$7,659	\$7,787	\$111	\$238
Equity swaps, options, and futures	4,548	5,130	107	267
Interest rate swaps and futures	6,924	5,705	(60)	67
Total	\$19,131	\$18,622	\$158	\$572

U.S. macro hedge program

The Company utilizes equity options to partially hedge against a decline in the equity markets and the resulting statutory surplus and capital impact primarily arising from GMDB and GMWB obligations. The following table represents notional and fair value for the U.S. macro hedge program.

	Notional Amount		Fair Value	
	September 30, 2013	December 31, 2012	September 30, 2013	December 31, 2012
Equity options	6,599	7,442	181	286
Total	\$6,599	\$7,442	\$181	\$286

International program

The Company formerly offered certain variable annuity products in Japan with GMWB or GMAB riders, which are bifurcated embedded derivatives ("International program product derivatives"). The GMWB provides the policyholder with a GRB if the account value is reduced to zero through a combination of market declines and withdrawals. The GRB is generally equal to premiums less withdrawals. Certain contract provisions can increase the GRB at contractholder election or after the passage of time. The GMAB provides the policyholder with their initial deposit in a lump sum after a specified waiting period. The notional amount of the International program product derivatives are the foreign currency denominated GRBs converted to U.S. dollars at the current foreign spot exchange rate as of the reporting period date.

The Company enters into derivative contracts ("International program hedging instruments") to hedge a portion of the capital market risk exposures associated with the guaranteed benefits associated with the international variable annuity contracts. During 2013, the Company expanded its hedging program to effectively eliminate equity and foreign currency exchange risk. The hedging derivatives are comprised of equity futures, options, swaps and currency forwards and options to hedge against a decline in the debt and equity markets or changes in foreign currency exchange rates and the resulting statutory surplus and capital impact primarily arising from GMDB, GMIB and GMWB obligations issued in Japan. The Company also enters into foreign currency denominated interest rate swaps and swaptions to hedge the interest rate exposure related to the potential annuitization of certain benefit obligations.

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

6. Investments and Derivative Instruments (continued)

The following table represents notional and fair value for the international program hedging instruments. As of September 30, 2013 the table below does not include hedging instruments used to hedge certain variable annuity products issued in the U.K since the Company entered into a definitive agreement to sell HLIL. For further information, see the Sale of Hartford Life International Limited ("HLIL") section below.

	Notional Amount		Fair Value	
	September 30, 2013	December 31, 2012	September 30, 2013	December 31, 2012
Credit derivatives	\$350	\$ 350	\$18	\$ 28
Currency forwards [1]	6,681	9,327	(151)(87)
Currency options	11,882	10,342	(9)(24)
Equity futures	2,377	2,332	—	—
Equity options	4,267	3,952	(138)(47)
Equity swaps	4,619	2,617	(10)(12)
Customized swaps	—	899	—	(11)
Interest rate futures	1,033	634	—	—
Interest rate swaps and swaptions	46,584	32,632	201	228
Total	\$77,793	\$ 63,085	\$(89)\$ 169

As of September 30, 2013 and December 31, 2012 net notional amounts are \$1.3 billion and \$0.1 billion, [1] respectively, which include \$4.0 billion and \$4.7 billion, respectively, related to long positions and \$2.7 billion and \$4.6 billion, respectively, related to short positions.

Contingent capital facility put option

The Company entered into a put option agreement that provides the Company the right to require a third-party trust to purchase, at any time, The Hartford's junior subordinated notes in a maximum aggregate principal amount of \$500. Under the put option agreement, The Hartford will pay premiums on a periodic basis and will reimburse the trust for certain fees and ordinary expenses.

Modified coinsurance reinsurance contracts

As of September 30, 2013 the Company had approximately \$1.3 billion of invested assets supporting other policyholder funds and benefits payable reinsured under a modified coinsurance arrangement in connection with the sale of the Individual Life business structured as a reinsurance transaction. The assets are held in a trust established by the Company. The Company pays or receives cash quarterly to settle the results of the reinsured business, including the investment results. As a result of this modified coinsurance arrangement, the Company has an embedded derivative that transfers to the reinsurer certain unrealized changes in fair value due to interest rate and credit risks of these assets. The notional amounts of the reinsurance contracts are the invested assets supporting the reinsured reserves that are carried at fair value.

Sale of Hartford Life International Limited ("HLIL")

The Company formerly offered certain variable annuity products in the U.K. through HLIL, an indirect wholly-owned subsidiary. During 2012 the Company entered into a customized swap to hedge the capital markets impacts. The Company has since entered into a definitive agreement to sell HLIL which is expected to close by the end of 2013. For additional information on the sale agreement, refer to Note 2 - Business Dispositions of Notes to Condensed Consolidated Financial Statements. Upon executing the sale agreement in the second quarter of 2013, the Company entered into equity futures contracts to substantially offset the equity market impacts of the customized swap. As of September 30, 2013 the Company terminated the customized swap and equity futures.

Derivative Balance Sheet Classification

The table below summarizes the balance sheet classification of the Company's derivative related fair value amounts; as well as, the gross asset and liability fair value amounts. For reporting purposes, the Company offsets the fair value

amounts, income accruals, and cash collateral held related to derivative instruments executed in a legal entity and with the same counterparty under a master netting agreement, which provides the Company with the legal right of offset. The fair value amounts presented below do not include income accruals or cash collateral held amounts, which are netted with derivative fair value amounts to determine balance sheet presentation. Derivative fair value reported as liabilities after taking into account the master netting agreements, is \$1.3 billion and \$1.5 billion as of September 30, 2013, and December 31, 2012, respectively. Derivatives in the Company's separate accounts where the associated gains and losses accrue directly to policyholders are not included. The Company's derivative instruments are held for risk management purposes, unless otherwise noted in the table below. The notional amount of derivative contracts represents the basis upon which pay or receive amounts are calculated and is presented in the table to quantify the volume of the Company's derivative activity. Notional amounts are not necessarily reflective of credit risk.

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

6. Investments and Derivative Instruments (continued)

Change in Notional Amount

The net decrease in notional amount of derivatives since December 31, 2012 was primarily due to the following:

The decrease in notional amount of non-qualifying interest rate contracts primarily resulted from the termination of interest rate swaptions purchased during the third quarter of 2012 designed to hedge the interest rate risk of the securities being transferred related to the sale of the Retirement Plan business segment.

The decrease in notional amount related to the U.S. GMWB product derivatives was primarily driven by lapses and partial withdrawals.

The decrease in notional amount related to the international program product derivatives was due to the announced sale of HLIL and the subsequent termination of the customized swap. Also related to the sale were certain derivatives included in international program hedging instruments that were reclassified to discontinued operations. For additional information on the sale agreement, refer to Note 2 - Business Dispositions of Notes to Condensed Consolidated Financial Statements.

The increase in notional amount related to the international program hedging instruments resulted from the Company expanding its hedging program to effectively eliminate equity and foreign currency exchange risk related to international product program guarantees.

Change in Fair Value

The net decrease in the total fair value of derivative instruments since December 31, 2012 was primarily related to the following:

The fair value related to the Japanese fixed annuity hedging instruments and Japan 3Win foreign currency swaps decreased primarily due to a depreciation of the Japanese yen in relation to the U.S. dollar.

The fair value associated with the international program hedging instruments decreased primarily due to an improvement in global equity markets and depreciation of the Japanese yen in relation to the euro and the U.S. dollar.

The increase in fair value related to the combined U.S. GMWB hedging program, which includes the U.S. GMWB product, reinsurance and hedging derivatives, was primarily due to favorable policyholder behavior largely related to increased surrenders, liability assumption updates for lapses and withdrawal rates, and the passage of time.

Offsetting of Derivative Assets/Liabilities

The following tables present the gross fair value amounts, the amounts offset, and net position of derivative instruments eligible for offset in the Company's Condensed Consolidated Balance Sheets. Amounts offset include fair value amounts, income accruals and cash collateral held related to derivative instruments that are traded under a common master netting agreement, as described above. Also included in the tables are financial collateral received and pledged, which is contractually permitted to be offset upon an event of default, although is disallowed for offsetting under U.S. GAAP.

[4] Excludes exchange-traded futures which are settled daily.

Cash Flow Hedges

For derivative instruments that are designated and qualify as cash flow hedges, the effective portion of the gain or loss on the derivative is reported as a component of OCI and reclassified into earnings in the same period or periods during which the hedged transaction affects earnings. Gains and losses on the derivative representing hedge ineffectiveness are recognized in current period earnings. All components of each derivative's gain or loss were included in the assessment of hedge effectiveness.

The following table presents the components of the gain or loss on derivatives that qualify as cash flow hedges:

Derivatives in Cash Flow Hedging Relationships

	Gain (Loss) Recognized in OCI on Derivative (Effective Portion)				Net Realized Capital Gains(Losses) Recognized in Income on Derivative (Ineffective Portion)			
	Three Months Ended September 30, 2013		Nine Months Ended September 30, 2013		Three Months Ended September 30, 2013		Nine Months Ended September 30, 2013

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

6. Investments and Derivative Instruments (continued)

As of September 30, 2013 the before tax deferred net gains on derivative instruments recorded in AOCI that are expected to be reclassified to earnings during the next twelve months are \$88. This expectation is based on the anticipated interest payments on hedged investments in fixed maturity securities that will occur over the next twelve months, at which time the Company will recognize the deferred net gains (losses) as an adjustment to interest income over the term of the investment cash flows. The maximum term over which the Company is hedging its exposure to the variability of future cash flows (for forecasted transactions, excluding interest payments on existing variable-rate financial instruments) is approximately three years.

During the three months and nine months ended September 30, 2013 the Company had no net reclassifications from AOCI to earnings resulting from the discontinuance of cash-flow hedges due to forecasted transactions that were no longer probable of occurring. During the three months ended September 30, 2012 the Company had no net reclassifications from AOCI to earnings resulting from the discontinuance of cash-flow hedges due to forecasted transactions that were no longer probable of occurring. During the nine months ended September 30, 2012 the Company had \$15 of net reclassifications from AOCI to earnings resulting from the discontinuance of cash-flow hedges due to forecasted transactions that were no longer probable of occurring.

Fair Value Hedges

For derivative instruments that are designated and qualify as a fair value hedge, the gain or loss on the derivative; as well as, the offsetting loss or gain on the hedged item attributable to the hedged risk are recognized in current earnings. The Company includes the gain or loss on the derivative in the same line item as the offsetting loss or gain on the hedged item. All components of each derivative's gain or loss were included in the assessment of hedge effectiveness.

The Company recognized in income gains (losses) representing the ineffective portion of fair value hedges as follows: Derivatives in Fair-Value Hedging Relationships

	Gain or (Loss) Recognized in Income [1]							
	Three Months Ended September 30, 2013				Nine Months Ended September 30, 2012			
	Derivative	Hedge Item	Derivative	Hedge Item	Derivative	Hedge Item	Derivative	Hedge Item
Interest rate swaps								
Net realized capital gain/(loss)	\$ (2) \$ 12	\$ (2) \$ 1	\$ 27	\$ (25) \$ (7) \$ 4
Foreign currency swaps								
Net realized capital gain/(loss)	2	(2) (6) 6	—	—	(8) 8
Benefits, losses and loss adjustment expenses	(1) 1	—	—	(2) 2	(6) 6
Total	\$ (1) \$ 11	\$ (8) \$ 7	\$ 25	\$ (23) \$ (21) \$ 18

The amounts presented do not include the periodic net coupon settlements of the derivative or the coupon income [1](expense) related to the hedged item. The net of the amounts presented represents the ineffective portion of the hedge.

Non-qualifying Strategies

For non-qualifying strategies, including embedded derivatives that are required to be bifurcated from their host contracts and accounted for as derivatives, the gain or loss on the derivative is recognized currently in earnings within net realized capital gains (losses). The following table presents the gain or loss recognized in income on non-qualifying strategies:

Derivatives Used in Non-Qualifying Strategies

Gain or (Loss) Recognized within Net Realized Capital Gains and Losses

The associated liability is adjusted for changes in spot rates through realized capital gains and was \$(16) and \$(46) [1] for the three months ended September 30, 2013 and 2012, respectively, and \$173 and \$19 for the nine months ended September 30, 2013 and 2012, respectively.

The associated liability is adjusted for changes in spot rates through realized capital gains and was \$(19) and \$(54) [2] for the three months ended September 30, 2013 and 2012, respectively, and \$222 and \$33 for the nine months ended September 30, 2013 and 2012, respectively.

For the three months and nine months ended September 30, 2013 the net realized capital gain (loss) related to derivatives used in non-qualifying strategies was primarily comprised of the following:

For the three and nine months ended September 30, 2013 the net losses associated with the international program hedging instruments were primarily driven by an improvement in global equity markets and depreciation of the Japanese yen in relation to the euro.

For the three and nine months ended September 30, 2013 the net gain related to the combined U.S. GMWB hedging program, which includes the U.S. GMWB product, reinsurance, and hedging derivatives, was primarily due to

favorable policyholder behavior largely related to increased surrenders, liability assumption updates for lapses and withdrawal rates, and the passage of time.

For the nine months ended September 30, 2013 the net loss related to the Japanese fixed annuity hedging instruments and the Japan 3Win foreign currency swaps was primarily due to a depreciation of the Japanese yen in relation to the U.S. dollar.

For the three and nine months ended September 30, 2013 the net loss on the U.S. macro hedge program was primarily due to an improvement in domestic equity markets, passage of time and an increase in long term interest rates.

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

6. Investments and Derivative Instruments (continued)

For the three and nine months ended September 30, 2012 the net realized capital gain (loss) related to derivatives used in non-qualifying strategies was primarily comprised of the following:

The net loss for the three months ended September 30, 2012 associated with the international program hedging instruments was primarily driven by an improvement in global and domestic equity markets, partially offset by appreciation of the Japanese yen in relation to the euro and the U.S. dollar. The net loss for the nine months ended September 30, 2012 associated with the international program hedging instruments was primarily driven by an improvement in global and domestic equity markets, and depreciation of the Japanese yen in relation to the euro and the U.S. dollar, partially offset by a decrease in interest rates.

For the three and nine months ended September 30, 2012 the net gain related to the combined U.S. GMWB hedging program, which includes the U.S. GMWB product, reinsurance, and hedging derivatives, was primarily a result of a liability model assumption update, a decrease in equity volatility, and outperformance of the underlying actively managed funds as compared to their respective indices.

For the three and nine months ended September 30, 2012 the net gain related to credit derivatives that assume credit risk was primarily due to credit spread tightening.

For the nine months ended September 30, 2012 the net loss related to the Japan 3Win foreign currency swaps was primarily due to a decline in U.S. interest rates, depreciation of the Japanese yen in relation to the U.S. dollar, and strengthening of the currency basis swap spread between U.S. dollar and Japanese yen.

Refer to Note 9 for additional disclosures regarding contingent credit related features in derivative agreements.

Credit Risk Assumed through Credit Derivatives

The Company enters into credit default swaps that assume credit risk of a single entity, referenced index, or asset pool in order to synthetically replicate investment transactions. The Company will receive periodic payments based on an agreed upon rate and notional amount and will only make a payment if there is a credit event. A credit event payment will typically be equal to the notional value of the swap contract less the value of the referenced security issuer's debt obligation after the occurrence of the credit event. A credit event is generally defined as a default on contractually obligated interest or principal payments or bankruptcy of the referenced entity. The credit default swaps in which the Company assumes credit risk primarily reference investment grade single corporate issuers and baskets, which include standard and customized diversified portfolios of corporate issuers. The diversified portfolios of corporate issuers are established within sector concentration limits and may be divided into tranches that possess different credit ratings.

The following tables present the notional amount, fair value, weighted average years to maturity, underlying referenced credit obligation type and average credit ratings, and offsetting notional amounts and fair value for credit derivatives in which the Company is assuming credit risk as of September 30, 2013 and December 31, 2012.

[1] The average credit ratings are based on availability and the midpoint of the applicable ratings among Moody's, S&P, and Fitch. If no rating is available from a rating agency, then an internally developed rating is used.

[2] Notional amount is equal to the maximum potential future loss amount. These derivatives are governed by agreements and clearing house rules and applicable law which include collateral posting requirements. There is no additional specific collateral related to these contracts or recourse provisions included in the contracts to offset losses.

[3] The Company has entered into offsetting credit default swaps to terminate certain existing credit default swaps, thereby offsetting the future changes in value of, or losses paid related to, the original swap going forward.

[4] Includes \$3.8 billion and \$4.5 billion as of September 30, 2013 and December 31, 2012, respectively, of standard market indices of diversified portfolios of corporate issuers referenced through credit default swaps. These swaps are subsequently valued based upon the observable standard market index.

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

7. Reinsurance

The Company cedes insurance to affiliated and unaffiliated insurers to enable the Company to manage capital and risk exposure. Such arrangements do not relieve the Company of its primary liability to policyholders. Failure of reinsurers to honor their obligations could result in losses to the Company. The Company's procedures include careful initial selection of its reinsurers, structuring agreements to provide collateral funds where necessary, and regularly monitoring the financial condition and ratings of its reinsurers. The Company entered into two reinsurance transactions in connection with the sales of its Retirement Plans and Individual Life businesses in January 2013. For further discussion of these transactions, see Note 2 - Business Dispositions of Notes to Condensed Consolidated Financial Statements.

The effect of reinsurance on property and casualty premiums written and earned is as follows:

	Three Months Ended		Nine Months Ended	
	September 30,		September 30,	
	2013	2012	2013	2012
Premiums Written				
Direct	\$2,790	\$2,725	\$8,120	\$7,991
Assumed	96	64	207	186
Ceded	(330)	(277)	(747)	(644)
Net	\$2,556	\$2,512	\$7,580	\$7,533
Premiums Earned				
Direct	\$2,651	\$2,640	\$7,829	\$7,848
Assumed	87	54	196	151
Ceded	(250)	(200)	(659)	(585)
Net	\$2,488	\$2,494	\$7,366	\$7,414

Ceded losses, which reduce losses and loss adjustment expenses incurred, were \$143 and \$375 for the three and nine months ended September 30, 2013, respectively and \$149 and \$389 for the three and nine months ended September 30, 2012.

Life insurance fees, earned premiums and other are comprised of the following:

	Three Months Ended		Nine Months Ended	
	September 30,		September 30,	
	2013	2012	2013	2012
Gross fee income, earned premiums and other	\$1,880	\$2,099	\$5,612	\$6,403
Reinsurance assumed	49	50	147	148
Reinsurance ceded	(374)	(136)	(1,144)	(392)
Net fee income, earned premiums and other	\$1,555	\$2,013	\$4,615	\$6,159

The Company reinsures certain of its risks to other reinsurers under yearly renewable term, coinsurance, and modified coinsurance arrangements, and variations thereto. Yearly renewable term and coinsurance arrangements result in passing all or a portion of the risk to the reinsurer. Generally, the reinsurer receives a proportionate amount of the premiums less an allowance for commissions and expenses and is liable for a corresponding proportionate amount of all benefit payments. Modified coinsurance is similar to coinsurance except that the cash and investments that support the liabilities for contract benefits are not transferred to the assuming company, and settlements are made on a net basis between the companies. Coinsurance with funds withheld is a form of coinsurance except that the investment assets that support the liabilities are withheld by the ceding company.

The cost of reinsurance related to long-duration contracts is accounted for over the life of the underlying reinsured policies using assumptions consistent with those used to account for the underlying policies. Insurance recoveries on ceded reinsurance agreements, which reduce death and other benefits, were \$214 and \$680 for the three and nine months ended September 30, 2013, respectively and \$88 and \$213 for the three and nine months ended September 30, 2012.

In addition, the Company has reinsured a portion of the risk associated with U.S. variable annuities and the associated GMDB and GMWB riders, and of the risks associated with variable annuity contract and rider benefits issued by Hartford Life Insurance KK (“HLIKK”), an indirect wholly owned subsidiary.

Table of Contents

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

7. Reinsurance (continued)

Reinsurance recoverables include balances due from reinsurance companies for paid and unpaid losses and loss adjustment expenses and are presented net of an allowance for uncollectible reinsurance. The reinsurance recoverables balance includes an estimate of the amount of gross losses and loss adjustment expense reserves that may be ceded under the terms of the reinsurance agreements, including incurred but not reported unpaid losses. The Company's estimate of losses and loss adjustment expense reserves ceded to reinsurers is based on assumptions that are consistent with those used in establishing the gross reserves for business ceded to the reinsurance contracts. The Company calculates its ceded reinsurance projection based on the terms of any applicable facultative and treaty reinsurance, including an estimate of how incurred but not reported losses will ultimately be ceded by reinsurance agreements. Accordingly, the Company's estimate of reinsurance recoverables is subject to similar risks and uncertainties as the estimate of the gross reserve for unpaid losses and loss adjustment expenses.

The allowance for uncollectible reinsurance was \$246 and \$268, as of September 30, 2013 and December 31, 2012, respectively. The allowance for uncollectible reinsurance reflects management's best estimate of reinsurance cessions that may be uncollectible in the future due to reinsurers' unwillingness or inability to pay. The Company analyzes recent developments in commutation activity between reinsurers and cedants, recent trends in arbitration and litigation outcomes in disputes between reinsurers and cedants and the overall credit quality of the Company's reinsurers. Based on this analysis, the Company may adjust the allowance for uncollectible reinsurance or charge off reinsurer balances that are determined to be uncollectible. Where its contracts permit, the Company secures future claim obligations with various forms of collateral, including irrevocable letters of credit, secured trusts, funds held accounts and group-wide offsets.

Due to the inherent uncertainties as to collection and the length of time before reinsurance recoverables become due, it is possible that future adjustments to the Company's reinsurance recoverables, net of the allowance, could be required, which could have a material adverse effect on the Company's consolidated results of operations or cash flows in a particular quarter or annual period.

As of September 30, 2013, the Company has reinsurance recoverables from MassMutual and Prudential of \$9.5 billion and \$9.6 billion, respectively. These reinsurance recoverables are secured by invested assets held in trust for the benefit of the Company in the event of a default by the reinsurers. As of September 30, 2013, the fair value of assets held in trust securing the reinsurance recoverables from MassMutual and Prudential were \$9.4 billion and \$7.5 billion, respectively. As of September 30, 2013, the net reinsurance recoverable from Prudential represents approximately 11% of the Company's consolidated stockholders' equity. As of September 30, 2013, the Company has no other reinsurance-related concentrations of credit risk greater than 10% of the Company's consolidated stockholders' equity.

8. Deferred Policy Acquisition Costs and Present Value of Future Profits

Changes in the DAC balance are as follows:

	Nine Months Ended	
	September 30,	
	2013	2012
Balance, beginning of period	\$5,725	\$6,556
Deferred costs	1,003	1,251
Amortization — DAC	(1,230)	(1,397)
Amortization — Unlock benefit (charge), pre-tax [1]	(1,091)	(44)
Amortization — DAC related to business dispositions [2] [3]	(2,229)	—
Adjustments to unrealized gains and losses on securities AFS and other	157	(408)
Effect of currency translation	(86)	(11)

Balance, end of period \$2,249 \$5,947

Includes Unlock charge of \$887 related to elimination of future estimated gross profits on the Japan variable annuity block in the first quarter of 2013 due to the increased costs associated with expanding the Japan variable annuity hedging program.

[2] Includes accelerated amortization of \$352 and \$2,374 recognized upon the sale of the Retirement Plans and Individual Life businesses, respectively, in the first quarter of 2013. For further information, see Note 2 - Business Dispositions of Notes to Consolidated Financial Statements.

[3] Includes previously unrealized gains on securities AFS of \$148 and \$349 recognized upon the sale of the Retirement Plans and Individual Life businesses, respectively, in the first quarter of 2013.

9. Separate Accounts, Death Benefits and Other Insurance Benefit Features (continued)

The following table provides details concerning GMDB and GMIB exposure as of September 30, 2013:

Individual Variable and Group Annuity Account Value by GMDB/GMIB Type

	Account Value ("AV") [8]	Net Amount at Risk ("NAR") [10]	Retained Net Amount at Risk ("RNAR") [10]	Weighted Average Attained Age of Annuitant
Maximum anniversary value ("MAV") [1]				
MAV only	\$19,367	\$3,112	\$562	69
With 5% rollup [2]	1,579	271	76	69
With Earnings Protection Benefit Rider ("EPB") [3]	4,828	582	82	67
With 5% rollup & EPB	573	117	26	70
Total MAV	26,347	4,082	746	
Asset Protection Benefit ("APB") [4]	18,669	383	257	67
Lifetime Income Benefit ("LIB") — Death Benefit [5]	378	11	11	66
Reset [6] (5-7 years)	3,205	84	83	69
Return of Premium ("ROP") [7]/Other	20,733	108	86	67
Subtotal U.S. GMDB	69,832	4,668	1,183	68
Less: General Account Value with U.S. GMDB	7,412			
Subtotal Separate Account Liabilities with GMDB	62,420			
Separate Account Liabilities without U.S. GMDB	77,456			
Total Separate Account Liabilities	\$139,876			
Japan GMDB [9], [11]	\$22,846	\$1,624	\$1,250	71
Japan GMIB [9], [11]	\$21,102	\$509	\$509	70

[1] MAV GMDB is the greatest of current AV, net premiums paid and the highest AV on any anniversary before age 80 years (adjusted for withdrawals).

[2] Rollup GMDB is the greatest of the MAV, current AV, net premium paid and premiums (adjusted for withdrawals) accumulated at generally 5% simple interest up to the earlier of age 80 years or 100% of adjusted premiums.

EPB GMDB is the greatest of the MAV, current AV, or contract value plus a percentage of the contract's growth.

[3] The contract's growth is AV less premiums net of withdrawals, subject to a cap of 200% of premiums net of withdrawals.

[4] APB GMDB is the greater of current AV or MAV, not to exceed current AV plus 25% times the greater of net premiums and MAV (each adjusted for premiums in the past 12 months).

[5] LIB GMDB is the greatest of current AV, net premiums paid, or for certain contracts a benefit amount that ratchets over time, generally based on market performance.

[6] Reset GMDB is the greatest of current AV, net premiums paid and the most recent five to seven year anniversary AV before age 80 years (adjusted for withdrawals).

[7] ROP GMDB is the greater of current AV or net premiums paid.

[8] AV includes the contract holder's investment in the separate account and the general account.

[9] GMDB includes a ROP and MAV (before age 80 years) paid in a single lump sum. GMIB is a guarantee to return initial investment, adjusted for earnings liquidity which allows for free withdrawal of earnings, paid through a fixed payout annuity, after a minimum deferral period of 10 years, 15 years or 20 years. The GRB related to the Japan GMIB was \$20.4 billion and \$28.6 billion as of September 30, 2013 and December 31, 2012, respectively. The GRB related to the Japan GMAB and GMWB was \$440 as of September 30, 2013 and \$578 as of December 31, 2012. These liabilities are not included in the Separate Account as they are not legally insulated from the general account liabilities of the insurance enterprise. As of September 30, 2013, 46% of the GMDB RNAR and 89% of the GMIB NAR is reinsured to a Hartford affiliate, as a result, the effects of the reinsurance are

not reflected in this disclosure.

[10] NAR is defined as the guaranteed benefit in excess of the current AV. RNAR represents NAR reduced for reinsurance. NAR and RNAR are highly sensitive to equity markets movements and increase when equity markets decline. Additionally Japan's NAR and RNAR are highly sensitive to currency movements and increase when the Yen strengthens.

[11] Policies with a guaranteed living benefit (GMIB in Japan) also have a guaranteed death benefit. The NAR for each benefit is shown in the table above, however these benefits are not additive. When a policy terminates due to death, any NAR related to GMWB or GMIB is released. Similarly, when a policy goes into benefit status on a GMWB or GMIB, its GMDB NAR is released.

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

9. Separate Accounts, Death Benefits and Other Insurance Benefit Features (continued)

In the U.S., account balances of contracts with guarantees were invested in variable separate accounts as follows:

Asset type	As of September 30, 2013	As of December 31, 2012
Equity securities (including mutual funds)	\$56,808	\$58,208
Cash and cash equivalents	5,612	6,940
Total	\$62,420	\$65,148

As of September 30, 2013 and December 31, 2012, approximately 15% and 16%, respectively, of the equity securities above were invested in fixed income securities through these funds and approximately 85% and 84%, respectively, were invested in equity securities through these funds.

For further information on guaranteed living benefits that are accounted for at fair value, such as GMWB see Note 5 - Fair Value Measurements of Notes to Condensed Consolidated Financial Statements.

10. Sales Inducements

Changes in sales inducement activity are as follows:

	Nine Months Ended September 30,	
	2013	2012
Balance, beginning of period	\$325	\$434
Sales inducements deferred	3	10
Amortization — Unlock benefit (charge) [1]	(71)(68
Amortization charged to income	(22)(26
Amortization related to business dispositions [2]	(71)—
Balance end of period	\$164	\$350

Includes Unlock charge of \$52 in the first quarter of 2013 related to elimination of future estimated gross profits on [1]the Japan variable annuity block due to the increased costs associated with expanding the Japan variable annuity hedging program.

Represents accelerated amortization of \$22 and \$49 in the first quarter of 2013 recognized upon the sale of the [2]Retirement Plans and Individual Life businesses, respectively. For further information, see Note 2 - Business Dispositions of Notes to Condensed Consolidated Financial Statements.

11. Commitments and Contingencies

Litigation

The Hartford is involved in claims litigation arising in the ordinary course of business, both as a liability insurer defending or providing indemnity for third-party claims brought against insureds and as an insurer defending coverage claims brought against it. The Hartford accounts for such activity through the establishment of unpaid loss and loss adjustment expense reserves. Subject to the uncertainties discussed below under the caption “Asbestos and Environmental Claims,” management expects that the ultimate liability, if any, with respect to such ordinary-course claims litigation, after consideration of provisions made for potential losses and costs of defense, will not be material to the consolidated financial condition, results of operations or cash flows of The Hartford.

The Hartford is also involved in other kinds of legal actions, some of which assert claims for substantial amounts. These actions include, among others, and in addition to the matters described below, putative state and federal class actions seeking certification of a state or national class. Such putative class actions have alleged, for example, underpayment of claims or improper underwriting practices in connection with various kinds of insurance policies, such as personal and commercial automobile, property, disability, life and inland marine. The Hartford also is involved in individual actions in which punitive damages are sought, such as claims alleging bad faith in the handling

of insurance claims or other allegedly unfair or improper business practices. Like many other insurers, The Hartford also has been joined in actions by asbestos plaintiffs asserting, among other things, that insurers had a duty to protect the public from the dangers of asbestos and that insurers committed unfair trade practices by asserting defenses on behalf of their policyholders in the underlying asbestos cases. Management expects that the ultimate liability, if any, with respect to such lawsuits, after consideration of provisions made for estimated losses, will not be material to the consolidated financial condition of The Hartford. Nonetheless, given the large or indeterminate amounts sought in certain of these actions, and the inherent unpredictability of litigation, the outcome in certain matters could, from time to time, have a material adverse effect on the Company's results of operations or cash flows in particular quarterly or annual periods.

Table of Contents

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

11. Commitments and Contingencies (continued)

Apart from the inherent difficulty of predicting litigation outcomes, the Mutual Funds Litigation identified below purports to seek substantial damages for unsubstantiated conduct spanning a multi-year period based on novel applications of complex legal theories. The alleged damages are not quantified or factually supported in the complaint, and, in any event, the Company's experience shows that demands for damages often bear little relation to a reasonable estimate of potential loss. The matter is in the earliest stages of litigation, with no substantive legal decisions by the court defining the scope of the claims or the potentially available damages; fact discovery is also in its early stages. Accordingly, management cannot reasonably estimate the possible loss or range of loss, if any, or predict the timing of the eventual resolution of this matter.

Mutual Funds Litigation — In February 2011, a derivative action was brought on behalf of six Hartford retail mutual funds in the United States District Court for the District of New Jersey, alleging that Hartford Investment Financial Services, LLC ("HIFSCO"), an indirect subsidiary of the Company, received excessive advisory and distribution fees in violation of its statutory fiduciary duty under Section 36(b) of the Investment Company Act of 1940. HIFSCO moved to dismiss and, in September 2011, the motion was granted in part and denied in part, with leave to amend the complaint. In November 2011, plaintiffs filed an amended complaint on behalf of The Hartford Global Health Fund, The Hartford Conservative Allocation Fund, The Hartford Growth Opportunities Fund, The Hartford Inflation Plus Fund, The Hartford Advisors Fund, and The Hartford Capital Appreciation Fund. Plaintiffs seek to rescind the investment management agreements and distribution plans between HIFSCO and these funds and to recover the total fees charged thereunder or, in the alternative, to recover any improper compensation HIFSCO received, in addition to lost earnings. HIFSCO filed a partial motion to dismiss the amended complaint and, in December 2012, the court dismissed without prejudice the claims regarding distribution fees and denied the motion with respect to the advisory fees claims. HIFSCO disputes the allegations and intends to defend vigorously.

Asbestos and Environmental Claims – As discussed in Note 12, Commitments and Contingencies, of the Notes to Consolidated Financial Statements under the caption "Asbestos and Environmental Claims", included in the Company's 2012 Form 10-K Annual Report, The Hartford continues to receive asbestos and environmental claims that involve significant uncertainty regarding policy coverage issues. Regarding these claims, The Hartford continually reviews its overall reserve levels and reinsurance coverages, as well as the methodologies it uses to estimate its exposures. Because of the significant uncertainties that limit the ability of insurers and reinsurers to estimate the ultimate reserves necessary for unpaid losses and related expenses, particularly those related to asbestos, the ultimate liabilities may exceed the currently recorded reserves. Any such additional liability cannot be reasonably estimated now but could be material to The Hartford's consolidated operating results and liquidity.

Derivative Commitments

Certain of the Company's derivative agreements contain provisions that are tied to the financial strength ratings of the individual legal entity that entered into the derivative agreement as set by nationally recognized statistical rating agencies. If the legal entity's financial strength were to fall below certain ratings, the counterparties to the derivative agreements could demand immediate and ongoing full collateralization and in certain instances demand immediate settlement of all outstanding derivative positions traded under each impacted bilateral agreement. The settlement amount is determined by netting the derivative positions transacted under each agreement. If the termination rights were to be exercised by the counterparties, it could impact the legal entity's ability to conduct hedging activities by increasing the associated costs and decreasing the willingness of counterparties to transact with the legal entity. The aggregate fair value of all derivative instruments with credit-risk-related contingent features that are in a net liability position as of September 30, 2013 is \$1.1 billion. Of this \$1.1 billion the legal entities have posted collateral of \$1.3 billion in the normal course of business. In addition, the Company has posted collateral of \$44 associated with a customized GMWB derivative. Based on derivative market values as of September 30, 2013 a downgrade of one level below the current financial strength ratings by either Moody's or S&P could require approximately an additional \$6 to be posted as collateral. Based on derivative market values as of September 30, 2013 a downgrade by either Moody's or

S&P of two levels below the legal entities' current financial strength ratings could require approximately an additional \$27 of assets to be posted as collateral. These collateral amounts could change as derivative market values change, as a result of changes in our hedging activities or to the extent changes in contractual terms are negotiated. The nature of the collateral that we would post, if required, would be primarily in the form of U.S. Treasury bills, U.S. Treasury notes and government agencies.

On June 17, 2013 S&P lowered its counterparty credit and insurer financial strength ratings on Hartford Life Insurance Company to BBB+. Given this downgrade action, termination rating triggers of one derivative counterparty relationship was impacted. This counterparty has the right to terminate this relationship and would have to settle the outstanding derivatives prior to exercising its termination right. The Company is in the process of re-negotiating the rating trigger which it expects to successfully complete. Accordingly, the Company's hedging programs have not been adversely impacted by the announcement of the downgrade of Hartford Life Insurance Company. As of September 30, 2013 the notional amount and fair value related to this counterparty is \$1.3 billion and \$(6), respectively.

Table of Contents

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

12. Employee Benefit Plans

Components of Net Periodic Benefit Cost

Net periodic benefit cost includes the following components:

	Pension Benefits		Other Postretirement Benefits	
	Three Months Ended September 30,		Three Months Ended September 30,	
	2013	2012	2013	2012
Service cost	\$1	\$20	\$—	\$—
Interest cost	59	64	3	3
Expected return on plan assets	(80)(78)(4)(4
Amortization of prior service credit	—	(2)(2)(2
Amortization of actuarial loss	15	52	1	—
Net periodic benefit cost	\$(5)\$56	\$(2)\$3

	Pension Benefits		Other Postretirement Benefits	
	Nine Months Ended September 30,		Nine Months Ended September 30,	
	2013	2012	2013	2012
Service cost	\$1	\$70	\$—	\$2
Interest cost	178	188	8	11
Expected return on plan assets	(237)(234)(11)(11
Amortization of prior service credit	—	(7)(5)(3
Amortization of actuarial loss	44	171	2	—
Curtailment gain due to plan freeze	—	(11) —	—
Net periodic benefit cost	\$(14)\$177	\$(6)\$1

The income in 2013 is a result of the expected return on plan assets more than offsetting the lower expenses due to the announced plan freeze. Lower expenses are primarily due to a change in the amortization period resulting in lower amortization of actuarial losses.

13. Stock Compensation Plans

The Company's stock-based compensation plans include The Hartford 2010 Incentive Stock Plan, The Hartford Employee Stock Purchase Plan and The Hartford Deferred Stock Unit Plan. For a description of these plans, see Note 19 of the Notes to Consolidated Financial Statements included in The Hartford's 2012 Form 10-K Annual Report. Shares issued in satisfaction of stock-based compensation may be made available from authorized but unissued shares, shares held by the Company in treasury or from shares purchased in the open market. The Company typically issues shares from treasury in satisfaction of stock-based compensation.

	Three Months Ended		Nine Months Ended	
	September 30,	September 30,	September 30,	September 30,
	2013	2012	2013	2012
Stock-based compensation plans expense	\$19	\$20	\$51	\$73
Income tax benefit	(7)(7)(18)(25
Total stock-based compensation plans expense, after-tax	\$12	\$13	\$33	\$48

The Company did not capitalize any cost of stock-based compensation. As of September 30, 2013, the total compensation cost related to non-vested awards not yet recognized was \$95, which is expected to be recognized over a weighted average period of 1.8 years.

Individual Life [3]	—	—	—	224	(224)	—
Retirement Plans [3]	87	(87)	—	87	—	87
Total Talcott Resolution	87	(87)	—	311	(224)	87
Corporate [3] [4]	299	(69)	230	417	(118)	299
Total	\$654	\$(156)	\$498	\$1,006	\$(352)	\$654

[1] Represents a reduction in goodwill recognized in connection with the sale of Retirement Plans.

[2] Represents a reduction in goodwill recognized in connection with the sale of WFS and a goodwill impairment recognized in connection with the sale of ILD.

[3] For further information, see Note 2 - Business Dispositions of Notes to Condensed Consolidated Financial Statements.

[4] Carrying value as of September 30, 2013 and December 31, 2012 includes \$138 for the Group Benefits and \$92 for Mutual Funds reporting units. Carrying value as of December 31, 2012 also includes \$69 for the Retirement Plans reporting unit.

16. Debt

The Hartford's long-term debt securities are issued by either The Hartford Financial Services Group, Inc. ("HFSG Holding Company") or Hartford Life, Inc. ("HLI"), an indirect wholly owned subsidiary, and are unsecured obligations of HFSG Holding Company or HLI and rank on a parity with all other unsecured and unsubordinated indebtedness of HFSG Holding Company or HLI.

On January 31, 2013, the Board of Directors authorized a capital management plan which provides for the repayment of approximately \$1.0 billion of debt including repayment of \$320 of 4.625% senior notes due in July 2013 and \$200 of 4.75% senior notes due in March 2014. The Company repaid the 4.625% senior notes on July 15, 2013.

Senior Debt

On March 26, 2013, the Company repurchased principal amounts of approximately \$800, plus a payment for unpaid interest on senior notes due through the settlement date. The Company recognized a loss on extinguishment in 2013 of approximately \$213, before tax, representing the excess of the repurchase price over the principal repaid and the write-off of the unamortized discount and debt issuance costs.

On April 18, 2013, the Company issued \$300 aggregate principal amount of 4.3% Senior Notes (the "4.3% Notes") due April 15, 2043 for net proceeds of approximately \$295, after deducting underwriting discounts and expenses from the offering. The 4.3% Notes bear interest at an annual fixed rate of 4.3% from the date of issuance to, April 15, 2043, payable semi-annually in arrears on April 15 and October 15, commencing October 15, 2013. The Company, at its option, can redeem the 4.3% Notes at any time in whole, or from time to time in part, at a redemption price at a discount rate of US Treasury due November 15, 2042 plus 25 basis points or, if greater, 100% of the principal amount of notes to be redeemed, plus accrued and unpaid interest to the date of redemption.

Total Debt	6,306	7,126
Less: Current maturities of long-term debt	200	320
Long-term Debt	\$6,106	\$6,806

Revolving Credit Facility

The Company has a senior unsecured revolving credit facility (the “Credit Facility”) that provides for borrowing capacity up to \$1.75 billion (which is available in U.S. dollars, and in Euro, Sterling, Canadian dollars and Japanese Yen) through January 6, 2016. Of the total availability under the Credit Facility, up to \$250 is available to support letters of credit issued on behalf of the Company or subsidiaries of the Company. Under the Credit Facility, the Company must maintain a minimum level of consolidated net worth of \$14.9 billion. The definition of consolidated net worth under the terms of the Credit Facility, excludes AOCI and includes the Company’s outstanding junior subordinated debentures and perpetual preferred securities, net of discount. In addition, the Company’s maximum ratio of consolidated total debt to consolidated total capitalization is 35%, and the ratio of consolidated total debt of subsidiaries to consolidated total capitalization is limited to 10%. As of September 30, 2013, the Company was in compliance with all financial covenants under the Credit Facility.

Table of Contents

THE HARTFORD FINANCIAL SERVICES GROUP, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)

17. Equity

On January 31, 2013, the Board of Directors authorized a capital management plan which provides for a \$500 equity repurchase program to be completed by December 31, 2014. During the nine months ended September 30, 2013, the Company repurchased 12.7 million common shares, for \$375, and 1.6 million warrants, for \$33, through this program. In addition, the Company repurchased 1.8 million common shares, for \$60, from October 1, 2013 to October 24, 2013. On June 26, 2013 the Board of Directors approved a \$750 increase in the Company's authorized equity repurchase program, bringing the total authorization to \$1.25 billion, with \$842 remaining as of September 30, 2013. The warrants outstanding at September 30, 2013 were 47.5 million.

The declaration of a quarterly common stock dividend in the first quarter of 2013 triggered a provision in The Hartford's Fixed Conversion Rate Agreement, relating to the Company's mandatory convertible preferred stock, resulting in an adjustment to the minimum conversion rate to 30.1920 from 29.8831 shares of Common Stock per share of Series F Preferred Stock and the maximum conversion rate to 36.8365 from 36.4596 shares of Common Stock per share of Series F Preferred Stock. On April 1, 2013 the mandatory convertible preferred stock converted to 21.2 million shares of common stock.

18. Restructuring and Other Costs

As a result of a strategic business realignment announced in 2012, the Company is currently focusing on its Property & Casualty, Group Benefits and Mutual Fund businesses. In addition, the Company implemented restructuring activities in 2011 across several areas aimed at reducing overall expense levels. The Company intends to substantially complete the related restructuring activities over the next 24 months. For related discussion of the Company's business disposition transactions, see Note 2 - Business Dispositions of Notes to Condensed Consolidated Financial Statements.

Termination benefits related to workforce reductions and lease and other contract terminations have been accrued through September 30, 2013. Additional costs, mainly severance benefits and other related costs and professional fees, expected to be incurred subsequent to September 30, 2013, and asset impairment and related charges, will be expensed as appropriate.

In the second quarter of 2013, the Company initiated a plan to consolidate its real estate operations in Connecticut, including the intention to exit certain facilities and relocate employees. The consolidation of real estate in Connecticut is consistent with the Company's strategic business realignment and follows the completion of sales of the Retirement Plans and Individual Life businesses. Asset related charges will be incurred over the remaining estimated useful life of facilities, and relocation and other maintenance charges will be recognized as incurred. The program costs will be recognized in the Corporate category for segment reporting.

Restructuring costs and other costs of approximately \$276, pre-tax have been incurred by the Company to date in connection with these activities. As the Company executes on its operational and strategic initiatives, the Company's estimate of and actual costs incurred for restructuring activities may differ from these estimates.

Estimated restructuring and other costs as of September 30, 2013 are as follows:

Property & Casualty Commercial	\$7
Consumer Markets	3
Group Benefits	1
Mutual Funds	4
Talcott Resolution	69
Corporate	261
Total restructuring and other costs, pre-tax	\$345

Item 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

(Dollar amounts in millions except share data unless otherwise stated)

Management's Discussion and Analysis of Financial Condition and Results of Operations ("MD&A") addresses the financial condition of The Hartford Financial Services Group, Inc. and its subsidiaries (collectively, "The Hartford" or the "Company") as of September 30, 2013, compared with December 31, 2012, and its results of operations for the three and nine months ended September 30, 2013, compared to the equivalent 2012 periods. This discussion should be read in conjunction with MD&A in The Hartford's 2012 Form 10-K Annual Report. Certain reclassifications have been made to prior period financial information to conform to the current period presentation.

On January 1, 2013, the Company completed the sale of its Retirement Plans business to Massachusetts Mutual Life Insurance Company ("MassMutual") and on January 2, 2013 the Company completed the sale of its Individual Life insurance business to The Prudential Insurance Company of America ("Prudential"), a subsidiary of Prudential Financial, Inc. For further discussion of these and other such transactions, see Note 2 - Business Dispositions and Note 7 - Reinsurance of Notes to Condensed Consolidated Financial Statements. In connection with the Company's June 27, 2013 announcement of the signing of a definitive agreement to sell HLIL, the operations of the Company's U.K. variable annuity business met the criteria for reporting as discontinued operations as further discussed in Note 14 - Discontinued Operations of Notes to Condensed Consolidated Financial Statements.

The Hartford defines increases or decreases greater than or equal to 200%, or changes from a net gain to a net loss position, or vice versa, as "NM" or not meaningful.

Three months ended September 30, 2013 compared to the three months ended September 30, 2012

The increase in net income from 2012 to 2013 was primarily due to the following items:

Reinsurance loss on disposition of \$533, before tax, in 2012 consisting of an impairment of goodwill and a loss accrual for premium deficiency related to the disposition of the Individual Life business, and losses in 2012 from the operations of the Retirement Plans and Individual Life businesses sold in the first quarter of 2013. For further discussion of the sale of these businesses, see Note 2 - Business Dispositions of Condensed Consolidated Financial Statements

A decrease in insurance operating costs and other expenses due to a benefit of \$57, before tax, for an insurance recovery from the Company's insurers for past legal expenses associated with closed litigation and a benefit of \$19, before tax, from the resolution of an item under the Company's spin-off agreement with its former parent company. Current accident year loss and loss adjustment expenses before catastrophes of \$1.6 billion, before tax, decreased in 2013, compared to \$1.7 billion, before tax, in 2012 driven by lower loss and loss adjustment expense ratios in P&C Commercial workers' compensation and professional liability, and for the three month period, lower non-catastrophe property losses in Middle Market.

A decrease in the Unlock charge to \$104, before tax in 2013 compared to \$124, before tax, in 2012, primarily due to assumption changes in connection with the annual policyholder behavior assumption study, partially offset by actual separate account returns above our aggregated estimated returns during both periods. For further discussion of Unlocks, see MD&A - Critical Accounting Estimates, Estimated Gross Profits Used in the Valuation and Amortization of Assets and Liabilities Associated with Variable Annuity and Other Universal Life-Type Contracts and MD&A - Talcott Resolution.

Partially offsetting the increase in net income were the following items:

Current accident year catastrophe losses of \$66, before tax, increased in 2013, compared to \$10, before tax, in 2012.

Losses in 2013 were primarily due to thunderstorms and tornadoes in the Midwest, South and mid-Atlantic states.

Losses in 2012 were primarily due to a hurricane event in the South.

Unfavorable current accident year prior year loss reserve development of \$17, before tax, in 2013, compared to favorable prior year loss reserve development of \$33, before tax, in 2012.

Net realized capital gains (losses) decreased to a net realized capital loss of \$162 in 2013 compared to net realized capital gains of \$95 in 2012, primarily due to losses on the international variable annuity hedge program in 2013. The losses in 2013 primarily resulted from the rising equity markets. Certain hedge assets generated realized capital losses on rising equity markets and weakening of the yen and are used to hedge liabilities that are not carried at fair value. For further discussion of investment results, see MD&A - Key Performance Measures and Ratios, Net Realized Capital Gains (Losses). For information on the related sensitivities of the variable annuity hedging program, see Enterprise Risk Management, Variable Product Guarantee Risks and Risk Management.

Table of Contents

Nine months ended September 30, 2013 compared to the nine months ended September 30, 2012

The decrease in net income from 2012 to 2013 was primarily due to the following items:

An increase in the Unlock charge of \$881, before tax, in 2013 compared to \$18, before tax, in 2012. The Unlock charge in 2013 was primarily due to Japan hedge cost assumption changes, partially offset by actual separate account returns being above our aggregated estimated returns during the period. The Unlock charge in 2012 was driven by assumption changes in connection with the annual policyholder behavior assumption study in the third quarter, partially offset by actual separate account returns above our aggregated estimated returns during the period. For further discussion of Unlocks, see MD&A - Critical Accounting Estimates, Estimated Gross Profits Used in the Valuation and Amortization of Assets and Liabilities Associated with Variable Annuity and Other Universal Life-Type Contracts and MD&A - Talcott Resolution.

Net realized capital gains (losses), excluding the realized capital gain on business dispositions, decreased to a loss of \$779, before tax, from a loss in the prior year of \$266, before tax, primarily due to losses on the international variable annuity hedge program in 2013. The losses in 2013 primarily resulted from the weakening of the yen and rising equity markets. Certain hedge assets generated realized capital losses on rising equity markets and weakening of the yen and are used to hedge liabilities that are not carried at fair value. For further discussion of investment results, see MD&A - Key Performance Measures and Ratios, Net Realized Capital Gains (Losses). For information on the related sensitivities of the variable annuity hedging program, see Enterprise Risk Management, Variable Product Guarantee Risks and Risk Management.

Income (loss) from discontinued operations, net of tax, decreased, primarily due to the realized capital loss on the sale of Hartford Life International, Ltd. ("HLIL") of \$102, after-tax, in the second quarter of 2013.

Net asbestos reserve strengthening of \$130, before tax in 2013, compared to \$48, before tax in 2012, resulting from the Company's annual review of its asbestos liabilities. For further information, see Critical Accounting Estimates, Property & Casualty Other Operations Claims with the Property and Casualty Insurance Product Reserves, Net of Reinsurance.

Partially offsetting the decrease in net income were the following items:

Reinsurance loss on disposition of \$533, before tax, in 2012 consisting of an impairment of goodwill and a loss accrual for premium deficiency related to the disposition of the Individual Life business, and losses in 2012 from the operations of the Retirement Plans and Individual Life businesses sold in the first quarter of 2013. For further discussion of the sale of these businesses, see Note 2 - Business Dispositions of Condensed Consolidated Financial Statements.

A loss on extinguishment of debt of \$213, before tax, in 2013, compared to \$910, before tax in 2012. The loss in 2013 related to the repurchase of approximately \$800 of senior notes at a premium to the face amount of the then outstanding debt. The resulting loss on extinguishment of debt consists of the repurchase premium, the write-off of the unamortized discount, and debt issuance and other costs related to the repurchase transaction. The loss in 2012 related to the repurchase of all outstanding 10% fixed-to-floating rate junior subordinated debentures due 2068 with a \$1.75 billion aggregate principal amount all held by Allianz. The loss in 2012 consisted of the premium associated with repurchasing the 10% Debentures at an amount greater than the face amount, the write-off of the unamortized discount and debt issuance costs related to the 10% Debentures and other costs related to the repurchase transaction. Current accident year catastrophe losses of \$284, before tax, in 2013, compared to \$371, before tax, in 2012. Losses in 2013 were primarily due to hail, tornadoes and wind in the South and Midwest and winter storms in the South. Losses in 2012 were primarily due to severe thunderstorms, hail events, and tornadoes in the South, Midwest and Mid-Atlantic states.

See the segment sections of the MD&A for a discussion on their respective performances.

Table of Contents

OUTLOOKS

The Hartford provides projections and other forward-looking information in the following discussions, which contain many forward-looking statements, particularly relating to the Company's future financial performance. These forward-looking statements are estimates based on information currently available to the Company, are made pursuant to the safe harbor provisions of the Private Securities Litigation Reform Act of 1995 and are subject to the cautionary statements set forth on pages 3 and 4 of this Form 10-Q. Actual results are likely to differ, and in the past have differed, materially from those forecast by the Company, depending on the outcome of various factors, including, but not limited to, those set forth in each discussion below and in Part I, Item 1A, Risk Factors in The Hartford's 2012 Form 10-K Annual Report and Part II, Item 1A, Risk Factors in The Hartford's Quarterly Report on Form 10-Q for the quarter ended March 31, 2013.

Overview

As a result of a strategic business realignment announced in March 2012, the Company is currently focusing its new business efforts on Property & Casualty, Group Benefits and Mutual Fund businesses. The objective of this realignment is to position the organization for higher returns on equity, reduced sensitivity to capital markets, a lower cost of capital and increased financial flexibility.

In 2012, the Company completed the sale of its U.S. individual annuities new business capabilities, the sale of the administration and operating assets of its private placement life insurance business and the sale of Woodbury Financial Services, Inc. ("WFS"). In January 2013, the Company completed the sale of its Retirement Plans and Individual Life insurance businesses. In June 2013, the Company announced the signing of a definitive agreement to sell Hartford Life International Limited ("HLIL"), an indirect wholly-owned subsidiary. For further discussion of these transactions, see Note 2 - Business Dispositions and Note 14 - Discontinued Operations of Notes to Condensed Consolidated Financial Statements.

On January 31, 2013, the Board of Directors authorized a capital management plan which provides for an equity repurchase program to be completed by December 31, 2014 and the reduction of approximately \$1.0 billion of debt including repayment of 2013 and 2014 debt maturities totaling \$520 in aggregate principal amount. In June 2013, the Board of Directors approved a \$750 increase in the Company's 2013-2014 equity repurchase program, bringing the total authorization to \$1.25 billion.

During the nine months ended September 30, 2013, the Company repurchased 12.7 million common shares, for \$375, and 1.6 million warrants, for \$33 under the equity repurchase program. In addition, the Company repurchased 1.8 million common shares, for \$60, from October 1, 2013 to October 24, 2013.

On March 26, 2013, the Company repurchased principal amounts of approximately \$800, plus a payment for unpaid interest on senior notes due through the settlement date. The Company recognized a loss on extinguishment in the nine months ended September 30, 2013 of approximately \$213, before tax, representing the excess of the repurchase price over the principal repaid and the write-off of the unamortized discount and debt issuance costs. On April 15, 2013, the Company issued \$300 aggregate principal amount of 4.3% Senior Notes (the "4.3% Notes") due April 15, 2043. On July 15, 2013, the Company repaid \$320 of 4.625% senior notes upon maturity. For additional information regarding debt, see Note 16 - Debt of Notes to Condensed Consolidated Financial Statements.

Slow economic and employment expansion may adversely impact the performance of the Company's insurance protection businesses where insureds may change their level of insurance, and asset accumulation businesses may see customers changing their investment choices and level of savings based on anticipated economic conditions. In addition, the performance of the Company's businesses is subject to uncertainty due to capital market conditions, which impact the earnings of its asset management businesses and valuations and earnings in its investment portfolio. The current and future interest rate environment also affects the performance of the Company's businesses. A sustained low interest rate environment would result in lower net investment income, lower estimated gross profits on certain Talcott Resolution products, and lower margins.

Table of Contents

Property & Casualty Commercial

Property & Casualty Commercial focuses on growth through market-differentiated products and services while maintaining a disciplined underwriting approach. Improving market conditions are expected to continue, which should enable the Company to also continue achieving price increases, while a slowly recovering economy is anticipated to drive a modest increase in insurance exposures. The Company expects flat to low single-digit written premium growth for 2013, as compared to 2012, driven by small commercial, with programs aimed at growing total policy counts, the rollout of new product enhancements, a leveraging of the payroll model, and the continued expansion of ease of doing business technology, and middle market, driven by strong pricing and initiatives which management believes positions the Company to expand its property and general liability footprint. In specialty lines, the Company expects written premiums to decline as management continues to streamline its programs business and adjust the mix within professional liability. The Property & Casualty Commercial combined ratio before catastrophes and prior accident year development is expected to improve for full year 2013 as compared to 2012 due to anticipated margin expansion across all businesses as expected earned pricing increases outpace loss costs.

Consumer Markets

The Company expects written premiums to be approximately 2% higher in 2013 compared to 2012, with growth in both AARP Direct and in business sold through independent agents to AARP members. Most of Consumer Markets' direct sales to the consumer are associated with its exclusive licensing arrangement with AARP to market automobile, homeowners and home-based business insurance products to AARP's approximately 37 million members. The company recently announced that this licensing arrangement had been extended through January 1, 2023. In 2013, management expects an increase in new business and improvement in premium retention driven by the effect of renewal written price increases on retained business. Within the Agency channel, management expects written premiums from policyholders other than AARP members to decline, driven by continued pricing and underwriting actions to improve profitability, including efforts to reposition the book into more mature, preferred market business. Management expects that the combined ratio before catastrophes and prior accident year development will be flat to slightly improved for full year 2013 as compared to 2012. For auto, the current accident year loss and loss adjustment expense ratio before catastrophes is expected to improve slightly for the 2013 full year driven by anticipated earned pricing increases that are expected to outpace the combination of slightly lower claim frequency and higher average claim severity. For homeowners, the current accident year loss and loss adjustment expense ratio before catastrophes is expected to be flat in 2013, driven by earned pricing increases and a continuation of the favorable non-catastrophe weather claim frequency that occurred in 2012.

Group Benefits

Group Benefits premiums are expected to decline for 2013 as compared to 2012, reflecting the Company's continued pricing discipline on new sales and renewals to improve profitability, including the loss of our largest account due to pricing and other considerations, and management actions within the Association business. Overall, the reductions to premiums will not significantly impact Group Benefits profitability due to expected improvements in the disability loss ratios as a result of pricing actions and improvements in claims management. The Company expects Group Benefits' disability results to improve for the full year 2013 as compared to 2012.

Mutual Funds

The primary objective of Mutual Funds is to increase earnings by growing total assets under management. Fund performance, fluctuations in the financial markets, developing and maintaining client relationships and net flows are all factors that influence assets under management. The relationship with Wellington Management Company, our primary sub-advisor, provides our retail and defined contribution clients with a diversified lineup of domestic and international equity, fixed income and asset allocation funds. These products, combined with our fund performance and expanded key client relationships, should drive improved net flows and earnings going forward.

Talcott Resolution

The principal goal for Talcott Resolution is to reduce the size and risk associated with the Company's U.S. and international in-force variable annuities. As a result, the Company expects account values and consequently earnings to decline over time as fees decrease due to surrenders, policyholder initiatives or transactions with third parties that will reduce the size of this legacy book of business. Our international variable annuity business will also continue to

be a significant driver of earnings variability due to hedge programs which generate mark to market gains and losses while the underlying international liabilities being hedged are not marked to market. This can result in unpredictable earnings volatility period to period. Contract surrender rates for the Japan book of business have increased significantly over the past six months as market appreciation has increased account values though it is difficult to determine whether increased surrender rates will persist and for how long. Higher surrender rates in Japan reduces the Company's exposure to guarantees under the variable annuity contracts, but also results in lower fee income.

CRITICAL ACCOUNTING ESTIMATES

The preparation of financial statements, in conformity with accounting principles generally accepted in the United States of America (“U.S. GAAP”), requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ, and in the past have differed, from those estimates.

The Company has identified the following estimates as critical in that they involve a higher degree of judgment and are subject to a significant degree of variability:

- property and casualty insurance product reserves, net of reinsurance;
- estimated gross profits used in the valuation and amortization of assets and liabilities associated with variable annuity and other universal life-type contracts;
- evaluation of other-than-temporary impairments on available-for-sale securities and valuation allowances on mortgage loans;
- living benefits required to be fair valued (in other policyholder funds and benefits payable);
- goodwill impairment;
- valuation of investments and derivative instruments;
- valuation allowance on deferred tax assets; and
- contingencies relating to corporate litigation and regulatory matters.

Certain of these estimates are particularly sensitive to market conditions, and deterioration and/or volatility in the worldwide debt or equity markets could have a material impact on the Condensed Consolidated Financial Statements. In developing these estimates management makes subjective and complex judgments that are inherently uncertain and subject to material change as facts and circumstances develop. Although variability is inherent in these estimates, management believes the amounts provided are appropriate based upon the facts available upon compilation of the financial statements.

Table of Contents

Property and Casualty Insurance Product Reserves, Net of Reinsurance

Based on the results of the quarterly reserve review process, the Company determines the appropriate reserve adjustments, if any, to record. Recorded reserve estimates are changed after consideration of numerous factors, including but not limited to, the magnitude of the difference between the actuarial indication and the recorded reserves, improvement or deterioration of actuarial indications in the period, the maturity of the accident year, trends observed over the recent past and the level of volatility within a particular line of business. In general, adjustments are made more quickly to more mature accident years and less volatile lines of business. Such adjustments of reserves are referred to as “reserve development”. Reserve development that increases previous estimates of ultimate cost is called “reserve strengthening”. Reserve development that decreases previous estimates of ultimate cost is called “reserve releases”. Reserve development can influence the comparability of year over year underwriting results and is set forth in the paragraphs and tables that follow.

Reserve Roll Forwards and Development

A roll-forward of property and casualty insurance product liabilities for unpaid losses and loss adjustment expenses for the nine months ended September 30, 2013 follows:

Nine Months Ended September 30, 2013

	Property & Casualty Commercial	Consumer Markets	Property & Casualty Other Operations	Total Property and Casualty Insurance
Beginning liabilities for unpaid losses and loss adjustment expenses, gross	\$16,020	\$1,926	\$3,770	\$21,716
Reinsurance and other recoverables	2,365	16	646	3,027
Beginning liabilities for unpaid losses and loss adjustment expenses, net	13,655	1,910	3,124	18,689
Provision for unpaid losses and loss adjustment expenses				
Current accident year before catastrophes	2,925	1,769	—	4,694
Current accident year catastrophes [3]	98	186	—	284
Prior accident years	71	(39) 145	177
Total provision for unpaid losses and loss adjustment expenses	3,094	1,916	145	5,155
Less: Payments	2,973	2,027	225	5,225
Ending liabilities for unpaid losses and loss adjustment expenses, net	13,776	1,799	3,044	18,619

During the three and nine months ended September 30, 2013, the Company's re-estimates of prior accident years reserves included the following significant reserve changes:

• Strengthened reserves in commercial auto liability, primarily related to specialty lines claims, arising from a higher frequency of large loss bodily injury claims in accident years 2010 through 2012.

• Released reserves in general liability in accident years 2006 through 2011. The emergence of claim severity as well as the frequency of late reported claims for these years was lower than expected and management has placed more weight on the emerged experience.

• Released reserves in professional liability for accident years 2008 through 2012 due to lower than expected claim severity, primarily for large-sized accounts.

• Released reserves for catastrophes primarily related to Storm Sandy.

• Other reserve re-estimates, net includes an \$18 recovery related to a class action settlement with American International Group involving prior accident years involuntary workers compensation pool loss and loss adjustment expense.

Table of Contents

Reserve strengthening in the nine months ended September 30, 2013 related to the closing of the New York Section 25A Fund for Reopened Cases (the "Fund"). These claims were previously funded through assessments and paid by the Fund. The claims will become payable by the Company effective January 1, 2014.

The Company reviewed its allowance for uncollectible reinsurance in the second quarter of 2013 and reduced its allowance as a result of favorable collections compared to expectations.

Refer to the Property & Casualty Other Operations Claims section for further discussion on net asbestos and net environmental reserves.

A roll-forward of property and casualty insurance product liabilities for unpaid losses and loss adjustment expenses for the nine months ended September 30, 2012 follows:

Nine Months Ended September 30, 2012

	Property & Casualty Commercial	Consumer Markets	Property & Casualty Other Operations	Total Property and Casualty Insurance
Beginning liabilities for unpaid losses and loss adjustment expenses, gross	\$15,437	\$2,061	\$4,052	\$21,550

Total prior accident years development	\$54	\$(127) \$60	\$(13)

During the three and nine months ended September 30, 2012, the Company's re-estimates of prior accident years reserves included the following significant reserve changes:

Released reserves for personal auto liability claims, primarily for accident years 2008 through 2010. As these accident years matured, favorable bodily injury severity trends were observed and management placed more weight on the emerged experience.

- Strengthened reserves for commercial auto liability claims, primarily for accident year 2011. Higher than expected bodily injury severity had been observed for this accident year.

Strengthened reserves for professional liability directors and officers claims for accident years 2010 and prior as a result of higher severity, primarily for mid-sized accounts.

Released reserves in package business liability coverages and general liability, primarily for accident years 2006 through 2011. Claim severity emergence for these years was lower than expected and management placed more weight on the emerged experience.

Strengthened reserves in workers' compensation primarily due to the emergence of lost time claims from 2011.

Table of Contents

Released reserves in commercial property for accident year 2011. Loss emergence for this accident year was favorable to expectations.

The change in workers' compensation discount, including accretion, primarily reflected a decrease in the number of tabular claims, and to a lesser extent, the decrease in interest rates.

Reserve releases on certain prior year catastrophes, primarily related to 2001 World Trade Center worker's compensation claims.

Refer to the Property & Casualty Other Operations Claims section for further discussion on net asbestos and net environmental reserves.

Property & Casualty Other Operations Claims

Reserve Activity

Reserves and reserve activity in Property & Casualty Other Operations are categorized and reported as asbestos, environmental, or "all other". The "all other" category of reserves covers a wide range of insurance and assumed reinsurance coverages, including, but not limited to, potential liability for construction defects, lead paint, silica, pharmaceutical products, molestation and other long-tail liabilities.

The following table presents reserve activity, inclusive of estimates for both reported and incurred but not reported claims, net of reinsurance, categorized by asbestos, environmental and all other claims, for the three and nine months ended September 30, 2013.

Property & Casualty Other Operations Losses and Loss Adjustment Expenses

Three Months Ended September 30, 2013	Asbestos	Environmental	All Other [1]	Total
Beginning liability—net [2][3]	\$ 1,805	\$ 289	\$ 1,007	\$ 3,101
Losses and loss adjustment expenses incurred	—	1	1	2
Less : losses and loss adjustment expenses paid	42	7	10	59
Ending liability – net [2][3]	\$ 1,763	[4] \$ 283	\$ 998	\$ 3,044
Nine Months Ended September 30, 2013	Asbestos	Environmental	All Other [1]	Total
Beginning liability—net [2][3]	\$ 1,776	\$ 290	\$ 1,058	\$ 3,124
Losses and loss adjustment expenses incurred	130	12	3	145
Less : losses and loss adjustment expenses paid	143	19	63	225
Ending liability – net [2][3]	\$ 1,763	[4] \$ 283	\$ 998	\$ 3,044

In addition to various insurance and assumed reinsurance exposures, "All Other" includes unallocated loss adjustment expense reserves. "All Other" also includes The Company's allowance for uncollectible reinsurance.

[1] When the Company commutes a ceded reinsurance contract or settles a ceded reinsurance dispute, the portion of the allowance for uncollectible reinsurance attributable to that commutation or settlement, if any, is reclassified to the appropriate cause of loss.

[2] Excludes amounts reported in Property & Casualty Commercial and Consumer Markets reporting segments (collectively "Ongoing Operations") for asbestos and environmental net liabilities of \$14 and \$6, respectively, as of September 30, 2013, \$14 and \$7, respectively, as of March 31, 2013 and June 30, 2013 and \$15 and 7, respectively, as of December 31, 2012; total net losses and loss adjustment expenses incurred for the three and nine months ended September 30, 2013 includes \$2 and \$6, respectively, related to asbestos and environmental claims, and total net losses and loss adjustment expenses paid for the three and nine months ended September 30, 2013 includes \$3 and \$8, respectively, related to asbestos and environmental claims.

[3] Gross of reinsurance, asbestos and environmental reserves, including liabilities in Ongoing Operations, were \$2,257 and \$325, respectively, as of September 30, 2013, \$2,310 and \$333, respectively, as of June 30, 2013, \$2,226 and \$330, respectively, as of March 31, 2013 and \$2,294 and \$334, respectively as of December 31, 2012.

[4] The one year and average three year net paid amounts for asbestos claims, including Ongoing Operations, are \$201 and \$214, respectively, resulting in a one year net survival ratio of 8.8 and a three year net survival ratio of 8.3. Net survival ratio is the quotient of the net carried reserves divided by the average annual payment amount and is an

indication of the number of years that the net carried reserve would last (i.e. survive) if the future annual claim payments were consistent with the calculated historical average.

For paid and incurred losses and loss adjustment expenses reporting, the Company classifies its asbestos and environmental reserves into three categories: Direct, Assumed Reinsurance and London Market. Direct insurance includes primary and excess coverage. Assumed reinsurance includes both “treaty” reinsurance (covering broad categories of claims or blocks of business) and “facultative” reinsurance (covering specific risks or individual policies of primary or excess insurance companies). London Market business includes the business written by one or more of the Company’s subsidiaries in the United Kingdom, which are no longer active in the insurance or reinsurance business. Such business includes both direct insurance and assumed reinsurance.

Table of Contents

Of the three categories of claims (Direct, Assumed Reinsurance and London Market), direct policies tend to have the greatest factual development from which to estimate the Company's exposures.

Assumed reinsurance exposures are inherently less predictable than direct insurance exposures because the Company may not receive notice of a reinsurance claim until the underlying direct insurance claim is mature. This causes a delay in the receipt of information at the reinsurer level and adds to the uncertainty of estimating related reserves. London Market exposures are the most uncertain of the three categories of claims. As a participant in the London Market (comprised of both Lloyd's of London and London Market companies), certain subsidiaries of the Company wrote business on a subscription basis, with those subsidiaries' involvement being limited to a relatively small percentage of a total contract placement. Claims are reported, via a broker, to the "lead" underwriter and, once agreed to, are presented to the following markets for concurrence. This reporting and claim agreement process makes estimating liabilities for this business the most uncertain of the three categories of claims.

The following table sets forth, for the three and nine months ended September 30, 2013, paid and incurred loss activity by the three categories of claims for asbestos and environmental.

Paid and Incurred Losses and Loss Adjustment Expenses ("LAE") Development – Asbestos and Environmental

	Asbestos [1]		Environmental [1]	
	Paid	Incurred	Paid	Incurred
Three Months Ended September 30, 2013	Losses & LAE	Losses & LAE	Losses & LAE	Losses & LAE
Gross

Direct	\$107	\$72	\$16	\$6
Assumed Reinsurance	44	50	2	6
London Market	13	8	3	—
Total	164	130	21	12
Ceded	(21)—	(2)—
Net	\$143	\$130	\$19	\$12

Excludes asbestos and environmental paid and incurred loss and LAE reported in Ongoing Operations. Total gross losses and LAE incurred in Ongoing Operations for the three and nine months ended September 30, 2013 includes [1]\$2 and \$6, respectively, related to asbestos and environmental claims. Total gross losses and LAE paid in Ongoing Operations for the three and nine months ended September 30, 2013 includes \$3 and \$8, respectively, related to asbestos and environmental claims.

During the second quarter of 2013, the Company completed its annual ground-up asbestos reserve evaluation. As part of this evaluation, the Company reviewed all of its open direct domestic insurance accounts exposed to asbestos liability, as well as assumed reinsurance accounts and its London Market exposures for both direct insurance and assumed reinsurance. Based on this evaluation, the Company increased its net asbestos reserves by \$130. The Company found estimates for individual cases changed based upon the particular circumstances of such accounts. These changes were case specific and not as a result of any underlying change in the current environment. The Company experienced moderate increases in claim frequency and severity as well as expense and costs associated

with litigating asbestos coverage matters, particularly against certain smaller, more peripheral insureds. The Company also experienced unfavorable development on certain of its assumed reinsurance accounts driven largely by the same factors experienced by the direct policyholders. The Company currently expects to continue to perform an evaluation of its asbestos liabilities annually.

83

Table of Contents

During the second quarter of 2013, the Company completed its annual ground-up environmental reserve evaluation. As part of this evaluation, the Company reviewed all of its open direct domestic insurance accounts exposed to environmental liability, as well as assumed reinsurance accounts and its London Market exposures for both direct and assumed reinsurance. Based on this evaluation, the Company increased its net environmental reserves by \$10. The Company found estimates for certain individual account exposures increased based upon unfavorable litigation results and increased clean-up or expense costs. The Company currently expects to continue to perform a ground-up evaluation of its environmental liabilities annually and regularly evaluate the Company's historical direct net loss and expense paid and reported experience, and net loss and expense paid and reported experience by calendar and/or report year, to assess any emerging trends, fluctuations or characteristics suggested by the aggregate paid and reported activity.

Uncertainties Regarding Adequacy of Asbestos and Environmental Reserves

A number of factors affect the variability of estimates for asbestos and environmental reserves including assumptions with respect to the frequency of claims, the average severity of those claims settled with payment, the dismissal rate of claims with no payment and the expense to indemnity ratio. The uncertainty with respect to the underlying reserve assumptions for asbestos and environmental adds a greater degree of variability to these reserve estimates than reserve estimates for more traditional exposures. While this variability is reflected in part in the size of the range of reserves developed by the Company, that range may still not be indicative of the potential variance between the ultimate outcome and the recorded reserves. The recorded net reserves as of September 30, 2013 of \$2.1 billion (\$1.78 billion and \$289 for asbestos and environmental, respectively) is within an estimated range, unadjusted for covariance, of \$1.7 billion to \$2.4 billion. The process of estimating asbestos and environmental reserves remains subject to a wide variety of uncertainties, which are detailed in the Company's 2012 Form 10-K Annual Report. The Company believes that its current asbestos and environmental reserves are appropriate. However, analyses of future developments could cause the Company to change its estimates and ranges of its asbestos and environmental reserves, and the effect of these changes could be material to the Company's consolidated operating results and liquidity.

Consistent with the Company's long-standing reserve practices, the Company will continue to review and monitor its reserves in Property & Casualty Other Operations regularly, including its annual reviews of asbestos liabilities, reinsurance recoverables and the allowance for uncollectible reinsurance, and environmental liabilities, and where future developments indicate, make appropriate adjustments to the reserves. For a discussion of the Company's reserving practices, see the Critical Accounting Estimates - Property and Casualty Insurance Product Reserves, Net of Reinsurance section of the MD&A included in the Company's 2012 Form 10-K Annual Report.

Table of Contents

Estimated Gross Profits Used in the Valuation and Amortization of Assets and Liabilities Associated with Variable Annuity and Other Universal Life-Type Contracts

Estimated gross profits ("EGPs") are used in the amortization of: the deferred policy acquisition costs ("DAC") asset, which includes the present value of future profits; sales inducement assets ("SIA"); and unearned revenue reserves ("URR").

In the third quarter of 2013, the Company completed its annual comprehensive non-market related policyholder behavior assumption study and incorporated the results of the study into its projections of estimated future gross profits. All assumptions changes are considered an Unlock in the period of revision. The Company will continue to evaluate our assumptions related to policyholder behavior as we begin to implement initiatives to reduce the size of the variable annuity business.

The most significant EGP based balances are as follows:

	Talcott Resolution	
	As of September 30, 2013	As of December 31, 2012
DAC [1]	\$1,632	\$5,112
SIA [1]	\$164	\$325
URR [2]	\$53	\$1,880
Death and Other Insurance Benefit Reserves [3]	\$1,214	\$1,942

For additional information on DAC and SIA, see Note 8 - Deferred Policy Acquisition Costs and Present Value of [1]Future Profits and Note 10 - Sales Inducements, respectively, of Notes to Condensed Consolidated Financial Statements.

URR associated with the Retirement Plans and Individual Life businesses are no longer included in EGP based balances due to the sales of these business in January 2013. As of December 31, 2012, URR included [2]approximately \$1.8 billion related to the Retirement Plans and Individual Life businesses. For additional information regarding business dispositions, see Note 2 - Business Dispositions of Notes to Condensed Consolidated Financial Statements.

Universal life ("UL") secondary guarantee benefits associated with the Retirement Plans and Individual Life businesses are no longer considered EGP based balances as the sales of these businesses were structured as reinsurance transactions. As of December 31, 2012, death and other insurance benefit reserves included \$363 of [3]UL secondary guarantee benefits. For additional information on death and other insurance benefit reserves, see Note 9 - Separate Accounts, Death Benefits and Other Insurance Benefit Features of Notes to Condensed Consolidated Financial Statements.

Unlocks

The (charge) benefit to net income (loss) by asset and liability as a result of the Unlocks is as follows:

	Talcott Resolution				
	Three Months Ended September 30,		Nine Months Ended September 30,		
	2013	2012	2013	2012	
DAC	\$(170)\$(79) \$(1,091)\$(44)
SIA	(12)\$(67) (71)\$(68)
URR	12	14	15	19	
Death and Other Insurance Benefit Reserves	66	8	266	75	
Total (before tax)	\$(104)\$(124) \$(881)\$(18)
Income tax effect	(37)\$(45) (309)\$(7)
Total (after-tax)	\$(67)\$(79) \$(572)\$(11)

The Unlock charge for the three months ended September 30, 2013 was primarily due to assumption changes in connection with the annual policyholder behavior assumption study, partially offset by actual separate account returns above our aggregated estimated returns during the period. The Unlock charge in 2013 was driven by an increase in lapses and partial withdrawals and a reduction in the spread between assumed investment income and contract

crediting rates. The Unlock charge for the three months ended September 30, 2012 was primarily due to the annual policyholder assumption update, partially offset by actual separate account returns above our aggregated estimated returns during the period. The Unlock charge in 2012 was driven by lower estimated gross profits due to increased unit costs and changes to benefit utilization assumptions.

85

Table of Contents

The Unlock charge for the nine months ended September 30, 2013 was primarily due to the Japan hedge cost assumption changes in the first quarter, partially offset by actual separate account returns above our aggregated estimated returns during the period. The Unlock charge for the nine months ended September 30, 2013 includes a charge of \$887, before tax, for hedge cost assumption changes related to the elimination of future estimated gross profits on the Japan variable annuity block based on increased costs associated with expanding the Japan variable annuity hedging program earlier in 2013. The Unlock charge for the nine months ended September 30, 2012 was primarily due to assumption changes in connection with the annual policyholder behavior assumption study in the third quarter, partially offset by actual separate account returns above our aggregated estimated returns during the period.

The after-tax (charge) benefit related to the annual policyholder assumption changes and market performance and other attributes for the three months ended September 30, 2013 is as follows:

	Talcott Resolution			Total	
	Three Months Ended September 30, 2013				
	U.S. Annuity	Japan Annuity	PPLI [1]		
Assumption changes	\$(108))\$4	\$(4))\$(108))
Market performance and other attributes [2]	8	33	—	41	
Total (after-tax)	\$(100))\$37	\$(4))\$(67))

[1] Private Placement Life Insurance.

[2] Other attributes include non-market components such as lapses.

An Unlock revises EGPs, on a quarterly basis, to reflect the Company's current best estimate assumptions and market updates of policyholder account value. Modifications to the Company's hedging programs may impact EGPs, and correspondingly impact DAC recoverability. After each quarterly Unlock, the Company also tests the aggregate recoverability of DAC by comparing the DAC balance to the present value of future EGPs. The margin between the DAC balance and the present value of future EGPs for U.S. individual variable annuities was 37% as of September 30, 2013. If the margin between the DAC asset and the present value of future EGPs is exhausted, then further reductions in EGPs would cause portions of DAC to be unrecoverable and the DAC asset would be written down to equal future EGPs.

Goodwill Impairment

The carrying value of goodwill allocated to reporting units is as follows:

	As of September 30, 2013			As of December 31, 2012		
	Segment Goodwill	Goodwill in Corporate	Total	Segment Goodwill	Goodwill in Corporate	Total
Group Benefits	\$—	\$138	\$138	\$—	\$138	\$138
Consumer Markets	119	—	119	119	—	119
Mutual Funds [2]	149	92	241	149	92	241
Talcott Resolution:						
Retirement Plans [1] [2]	—	—	—	87	69	156
Total	\$268	\$230	\$498	\$355	\$299	\$654

[1] For further information, see Note 2 - Business Dispositions of Notes to Condensed Consolidated Financial Statements.

[2] For further information, see Note 15 - Goodwill of Notes to Condensed Consolidated Financial Statements.

Goodwill balances are reviewed for impairment at least annually or more frequently if events occur or circumstances change that would indicate that a triggering event for a potential impairment has occurred.

Management's determination of the fair value of each reporting unit incorporates multiple inputs into discounted cash flow calculations including assumptions that market participants would make in valuing the reporting unit.

Assumptions include levels of economic capital, future business growth, earnings projections, and assets under

management for Mutual Funds and the reporting units within Talcott Resolution and the weighted average cost of capital used for purposes of discounting. Decreases in the amount of economic capital allocated to a reporting unit, decreases in business growth, decreases in earnings projections and increases in the weighted average cost of capital will all cause a reporting unit's fair value to decrease.

A reporting unit is defined as an operating segment or one level below an operating segment. Certain of the Company's reporting units, for which goodwill has been allocated, are equivalent to the Company's operating segments as there is no discrete financial information available for the separate components of the segment or all of the components of the segment have similar economic characteristics. The Group Benefits, Consumer Markets and Mutual Funds operating segments all have equivalent reporting units.

Table of Contents

THE HARTFORD'S OPERATIONS OVERVIEW

The Hartford is a financial holding company for a group of subsidiaries that provide property and casualty and investment products to both individual and business customers in the United States and continues to manage life and annuity products previously sold.

The Company currently conducts business principally in the following six reporting segments Property & Casualty Commercial, Consumer Markets, Property & Casualty Other Operations, Group Benefits, Mutual Funds and Talcott Resolution. For additional discussion regarding The Hartford's reporting segments, see Note 4 - Segment Information of Notes to Condensed Consolidated Financial Statements.

The Company derives its revenues principally from: (a) premiums earned for insurance coverages provided to insureds; (b) fee income, including asset management fees, on separate account and mutual fund assets and mortality and expense fees, as well as cost of insurance charges; (c) net investment income; (d) fees earned for services provided to third parties; and (e) net realized capital gains and losses. Premiums charged for insurance coverages are earned principally on a pro rata basis over the terms of the related policies in-force. Asset management fees and mortality and expense fees are primarily generated from separate account assets, which are deposited through the sale of variable annuity and variable universal life products and from mutual funds. The fees earned on variable universal life products are subsequently ceded through third-party reinsurance agreements. Cost of insurance charges are assessed on the net amount at risk for investment-oriented life insurance products. Service fees principally include revenues from member contact center services provided through the AARP Health program.

Profitability over time is greatly influenced by the Company's underwriting discipline, which seeks to manage exposure to loss through favorable risk selection and diversification, its management of claims, its use of reinsurance, the size of its in force block, actual mortality and morbidity experience, and its ability to manage its expense ratio which it accomplishes through economies of scale and its management of acquisition costs and other underwriting expenses.

Pricing adequacy depends on a number of factors, including the ability to obtain regulatory approval for rate changes, proper evaluation of underwriting risks, the ability to project future loss cost frequency and severity based on historical loss experience adjusted for known trends, the Company's response to rate actions taken by competitors, and expectations about regulatory and legal developments and expense levels. The Company seeks to price its insurance policies such that insurance premiums and future net investment income earned on premiums received will cover underwriting expenses and the ultimate cost of paying claims reported on the policies and provide for a profit margin. For many of its insurance products, the Company is required to obtain approval for its premium rates from state insurance departments.

The financial results in the Company's variable annuity and mutual fund businesses, depend largely on the amount of the contract holder account value or assets under management on which it earns fees and the level of fees charged. Changes in account value or assets under management are driven by two main factors: net flows, which measure the success of the Company's asset gathering and retention efforts within the mutual funds business, and the market return of the funds, which is heavily influenced by the return realized in the equity markets. Net flows are comprised of deposits less surrenders, death benefits, policy charges and annuitizations of investment type contracts, such as variable annuity contracts. In the mutual fund business, net flows are known as net sales. Net sales are comprised of new sales less redemptions by mutual fund customers. The Company uses the average daily value of the S&P 500 Index as an indicator for evaluating market returns of the underlying account portfolios in the United States. Relative financial results of variable products, net of hedging, are highly correlated to the growth in account values or assets under management since these products generally earn fee income on a daily basis. Equity market movements could also result in benefits for or charges against deferred acquisition costs.

The profitability of fixed annuities and other "spread-based" products depends largely on the Company's ability to earn target spreads between earned investment rates on its general account assets and interest credited to policyholders. In addition, the size and persistency of gross profits from these businesses is an important driver of earnings as it affects the rate of amortization of deferred policy acquisition costs.

The investment return, or yield, on invested assets is an important element of the Company's earnings since insurance products are priced with the assumption that premiums received can be invested for a period of time before benefits,

loss and loss adjustment expenses are paid. Due to the need to maintain sufficient liquidity to satisfy claim obligations, the majority of the Company's invested assets have been held in available-for-sale securities, including, among other asset classes, corporate bonds, municipal bonds, government debt, short-term debt, mortgage-backed securities and asset-backed securities.

The primary investment objective for the Company is to maximize economic value, consistent with acceptable risk parameters, including the management of credit risk and interest rate sensitivity of invested assets, while generating sufficient after-tax income to meet policyholder and corporate obligations. Investment strategies are developed based on a variety of factors including business needs, regulatory requirements and tax considerations.

For a discussion on how the Company establishes property and casualty insurance product reserves, see "Property and Casualty Insurance Product Reserves, Net of Reinsurance" in the Critical Accounting Estimates section of MD&A and for further information on Unlocks, see "Estimated Gross Profits Used in the Valuation and Amortization of Assets and Liabilities Associated with Variable Annuity and Other Universal Life-Type Contracts" also in the Critical Accounting Estimates section of MD&A.

Table of Contents

KEY PERFORMANCE MEASURES AND RATIOS

The Company considers several measures and ratios to be the key performance indicators for its businesses. The following discussions include the more significant ratios and measures of profitability for the three and nine months ended September 30, 2013 and 2012. Management believes that these ratios and measures are useful in understanding the underlying trends in The Hartford's businesses. However, these key performance indicators should only be used in conjunction with, and not in lieu of, the results presented in the segment discussions that follow in this MD&A. These ratios and measures may not be comparable to other performance measures used by the Company's competitors. For additional information on key performance measures and ratios, see Definitions of Non-GAAP and other measures and ratios within MD&A of The Hartford's 2012 Form 10-K Annual Report.

Definitions of Non-GAAP and other measures and ratios

Account Value

Account value includes policyholders' balances for investment contracts and reserves for future policy benefits for insurance contracts. Account value is a measure used by the Company because a significant portion of the Company's fee income is based upon the level of account value. These revenues increase or decrease with a rise or fall in the amount of account value whether caused by changes in the market or through net flows.

After-tax Margin, excluding buyouts and realized gains (losses)

After-tax margin, excluding buyouts and realized gains (losses), is a non-GAAP financial measure that the Company uses to evaluate, and believes is an important measure of, the Group Benefits segment's operating performance.

After-tax margin is the most directly comparable U.S. GAAP measure. The Company believes that after-tax margin, excluding buyouts and realized gains (losses), provides investors with a valuable measure of the performance of Group Benefits because it reveals trends in the business that may be obscured by the effect of buyouts and realized gains (losses). After-tax margin, excluding buyouts and realized gains (losses), should not be considered as a substitute for after-tax margin and does not reflect the overall profitability of Group Benefits. Therefore, the Company believes it is important for investors to evaluate both after-tax margin, excluding buyouts and realized gains (losses), and after-tax margin when reviewing performance. After-tax margin, excluding buyouts and realized gains (losses) is calculated by dividing core earnings excluding buyouts and realized gains (losses) by total core revenues excluding buyouts and realized gains (losses). A reconciliation of after-tax margin to after-tax margin, core earnings excluding buyouts and realized gains (losses) for the three and nine months ended September 30, 2013 and 2012 is set forth in the After-tax Margin section within MD&A - Group Benefits.

Assets Under Management

Assets under management ("AUM") include account values and mutual fund assets. AUM is a measure used by the Company because a significant portion of the Company's revenues are based upon asset values. These revenues increase or decrease with a rise or fall in the amount of account value whether caused by changes in the market or through net flows.

Catastrophe ratio

The catastrophe ratio (a component of the loss and loss adjustment expense ratio) represents the ratio of catastrophe losses incurred in the current calendar year (net of reinsurance) to earned premiums and includes catastrophe losses incurred for both the current and prior accident years. A catastrophe is an event that causes \$25 or more in industry insured property losses and affects a significant number of property and casualty policyholders and insurers. The catastrophe ratio includes the effect of catastrophe losses, but does not include the effect of reinstatement premiums.

Combined ratio

The combined ratio is the sum of the loss and loss adjustment expense ratio, the expense ratio and the policyholder dividend ratio. This ratio is a relative measurement that describes the related cost of losses and expenses for every \$100 of earned premiums. A combined ratio below 100 demonstrates underwriting profit; a combined ratio above 100 demonstrates underwriting losses.

Combined ratio before catastrophes and prior accident year development

The combined ratio before catastrophes and prior accident year development, a non-GAAP financial measure, represents the combined ratio for the current accident year, excluding the impact of catastrophes. Combined ratio is the most directly comparable U.S. GAAP measure. A reconciliation of combined ratio to combined ratio before prior

accident year reserve development for the three and nine months ended September 30, 2013 and 2012 is set forth in MD&A - Property & Casualty Commercial and Consumer Markets.

Table of Contents

Core Earnings

Core earnings, a non-GAAP measure, is an important measure of the Company's operating performance. The Company believes that core earnings provides investors with a valuable measure of the performance of the Company's ongoing businesses because it reveals trends in our insurance and financial services businesses that may be obscured by including the net effect of certain realized capital gains and losses, discontinued operations, loss on extinguishment of debt, gains and losses on business disposition transactions, certain restructuring charges and the impact of Unlocks to DAC, SIA, URR and death and other insurance benefit reserve balances. Some realized capital gains and losses are primarily driven by investment decisions and external economic developments, the nature and timing of which are unrelated to the insurance and underwriting aspects of our business. Accordingly, core earnings excludes the effect of all realized gains and losses (net of tax and the effects of DAC) that tend to be highly variable from period to period based on capital market conditions. The Company believes, however, that some realized capital gains and losses are integrally related to our insurance operations, so core earnings includes net realized gains and losses such as net periodic settlements on credit derivatives and net periodic settlements on the Japan fixed annuity cross-currency swap. These net realized gains and losses are directly related to an offsetting item included in the income statement such as net investment income. Net income (loss) is the most directly comparable U.S. GAAP measure. Core earnings should not be considered as a substitute for net income (loss) and does not reflect the overall profitability of the Company's business. Therefore, the Company believes that it is useful for investors to evaluate both net income (loss) and core earnings when reviewing the Company's performance.

A reconciliation of net income (loss) to core earnings for the three and nine months ended September 30, 2013 and 2012 is set forth below.

	Three Months Ended		Nine Months Ended	
	September 30,		September 30,	
	2013	2012	2013	2012
Net income (loss)	\$293	\$13	\$(138)	\$8
Less: Unlock charge, after-tax	(67)	(79)	(572)	(11)
Less: Restructuring and other costs, after-tax	(10)	(34)	(34)	(71)
Less: Income (loss) from discontinued operations, after-tax	(5)	20	(132)	63
Less: Loss on extinguishment of debt, after-tax	—	—	(138)	(587)
Less: Net reinsurance loss on dispositions, after-tax	—	(388)	(24)	(388)
Less: Net realized capital gains (losses), after-tax and DAC, excluded from core earnings [1]	(130)	61	(524)	(128)
Core earnings	\$505	\$433	\$1,286	\$1,130

Excludes net realized gain on dispositions of \$1.0 billion, after-tax, for the nine months ended September 30, 2013 [1] relating to the sales of the Retirement Plans and Individual Life businesses which are included in net reinsurance loss on dispositions, after-tax.

Current accident year loss and loss adjustment expense ratio before catastrophes

The current accident year loss and loss adjustment expense ratio before catastrophes is a measure of the cost of non-catastrophe claims incurred in the current accident year divided by earned premiums. Management believes that the current accident year loss and loss adjustment expense ratio before catastrophes is a performance measure that is useful to investors as it removes the impact of volatile and unpredictable catastrophe losses and prior accident year reserve development.

Expense ratio

The expense ratio for the underwriting segments of Property & Casualty Commercial and Consumer Markets is the ratio of underwriting expenses, excluding bad debt expense, to earned premiums. Underwriting expenses include the amortization of deferred policy acquisition costs and insurance operating costs and expenses. Deferred policy acquisition costs include commissions, taxes, licenses and fees and other underwriting expenses and are amortized over the policy term.

The expense ratio for Group Benefits is expressed as a ratio of insurance operating costs and other expenses and amortization of deferred policy acquisition costs, to premiums and other considerations, excluding buyout premiums.

Fee Income

Fee income is largely driven from amounts collected as a result of contractually defined percentages of assets under management. These fees are generally collected on a daily basis. Therefore, the growth in assets under management either through positive net flows or net sales, or favorable equity market performance will have a favorable impact on fee income. Conversely, either negative net flows or net sales, or unfavorable equity market performance will reduce fee income.

Full Surrender Rates

Full surrender rates are an internal measure of contract surrenders calculated using annualized full surrenders divided by a two-point average of annuity account values. The full surrender rate represents full contract liquidation and excludes partial withdrawals.

Table of Contents

Loss and loss adjustment expense ratio

The loss and loss adjustment expense ratio is a measure of the cost of claims incurred in the calendar year divided by earned premium and includes losses incurred for both the current and prior accident years, as well as the costs of mortality and morbidity and other contractholder benefits to policyholders. Among other factors, the loss and loss adjustment expense ratio needed for the Company to achieve its targeted return on equity fluctuates from year to year based on changes in the expected investment yield over the claim settlement period, the timing of expected claim settlements and the targeted returns set by management based on the competitive environment.

The loss and loss adjustment expense ratio is affected by claim frequency and claim severity, particularly for shorter-tail property lines of business, where the emergence of claim frequency and severity is credible and likely indicative of ultimate losses. Claim frequency represents the percentage change in the average number of reported claims per unit of exposure in the current accident year compared to that of the previous accident year. Claim severity represents the percentage change in the estimated average cost per claim in the current accident year compared to that of the previous accident year. As one of the factors used to determine pricing, the Company's practice is to first make an overall assumption about claim frequency and severity for a given line of business and then, as part of the ratemaking process, adjust the assumption as appropriate for the particular state, product or coverage.

Loss ratio, excluding buyouts

The loss ratio is utilized for the Group Benefits segment and is expressed as a ratio of benefits, losses and loss adjustment expenses to premiums and other considerations, excluding buyout premiums. Since Group Benefits occasionally buys a block of claims for a stated premium amount, the Company excludes this buyout from the loss ratio used for evaluating the underwriting results of the business as buyouts may distort the loss ratio. Buyout premiums represent takeover of open claim liabilities and other non-recurring premium amounts.

Mutual Fund Assets

Mutual fund assets are owned by the shareholders of those funds and not by the Company and therefore are not reflected in the Company's consolidated financial statements. Mutual fund assets are a measure used by the Company because a significant portion of the Company's revenues are based upon asset values. These revenues increase or decrease with a rise or fall in the amount of account value whether caused by changes in the market or through net flows.

New business written premium

New business written premium represents the amount of premiums charged for policies issued to customers who were not insured with the Company in the previous policy term. New business written premium plus renewal policy written premium equals total written premium.

Policies in force

Policies in force represent the number of policies with coverage in effect as of the end of the period. The number of policies in force is a growth measure used for Consumer Markets and standard commercial lines within Property & Casualty Commercial and is affected by both new business growth and premium renewal retention.

Policy count retention

Policy count retention represents the ratio of the number of policies renewed during the period divided by the number of policies from the previous policy term period. The number of policies available to renew from the previous policy term represents the number of policies written in the previous policy term net of any cancellations of those policies. Policy count retention is affected by a number of factors, including the percentage of renewal policy quotes accepted and decisions by the Company to non-renew policies because of specific policy underwriting concerns or because of a decision to reduce premium writings in certain classes of business or states. Policy count retention is also affected by advertising and rate actions taken by competitors.

Policyholder dividend ratio

The policyholder dividend ratio is the ratio of policyholder dividends to earned premium.

Prior accident year loss and loss adjustment expense ratio

The prior year loss and loss adjustment expense ratio represents the increase (decrease) in the estimated cost of settling catastrophe and non-catastrophe claims incurred in prior accident years as recorded in the current calendar year divided by earned premiums.

Reinstatement premiums

Reinstatement premium represents additional ceded premium paid for the reinstatement of the amount of reinsurance coverage that was reduced as a result of a reinsurance loss payment.

90

Table of Contents

Renewal earned price increase (decrease)

Written premiums are earned over the policy term, which is six months for certain personal lines auto business and 12 months for substantially all of the remainder of the Company's property and casualty business. Because the Company earns premiums over the 6 to 12 month term of the policies, renewal earned price increases (decreases) lag renewal written price increases (decreases) by 6 to 12 months.

Renewal written price increase (decrease)

Renewal written price increase (decrease) represents the combined effect of rate changes, amount of insurance and individual risk pricing decisions per unit of exposure since the prior year. The rate component represents the change in rate filings during the period and the amount of insurance represents the change in the value of the rating base, such as model year/vehicle symbol for auto, building replacement costs for property and wage inflation for workers' compensation. A number of factors affect renewal written price increases (decreases) including expected loss costs as projected by the Company's pricing actuaries, rate filings approved by state regulators, risk selection decisions made by the Company's underwriters and marketplace competition. Renewal written price changes reflect the property and casualty insurance market cycle. Prices tend to increase for a particular line of business when insurance carriers have incurred significant losses in that line of business in the recent past or the industry as a whole commits less of its capital to writing exposures in that line of business. Prices tend to decrease when recent loss experience has been favorable or when competition among insurance carriers increases. Renewal written price statistics are subject to change from period to period, based on a number of factors, including changes in actuarial estimates and the effect of subsequent cancellations and non-renewals on rate achieved, and modifications made to better reflect ultimate pricing achieved.

Return on Assets ("ROA"), core earnings

ROA, core earnings, is a non-GAAP financial measure that the Company uses to evaluate, and believes is an important measure of, certain of the segment's operating performance. ROA is the most directly comparable U.S. GAAP measure. The Company believes that ROA, core earnings, provides investors with a valuable measure of the performance of certain of the Company's on-going businesses because it reveals trends in our businesses that may be obscured by the effect of realized gains (losses). ROA, core earnings, should not be considered as a substitute for ROA and does not reflect the overall profitability of our businesses. Therefore, the Company believes it is important for investors to evaluate both ROA, core earnings, and ROA when reviewing the Company's performance. ROA is calculated by dividing core earnings by a two-point average AUM. A reconciliation of ROA to ROA, core earnings for the three and nine months ended September 30, 2013 and 2012 is set forth in the ROA section within MD&A - Mutual Funds.

Underwriting gain (loss)

The Company's management evaluates profitability of the P&C businesses primarily on the basis of underwriting gain (loss). Underwriting gain (loss) is a before tax measure that represents earned premiums less incurred losses, loss adjustment expenses and underwriting expenses. Underwriting gain (loss) is influenced significantly by earned premium growth and the adequacy of the Company's pricing. Underwriting profitability over time is also greatly influenced by the Company's underwriting discipline, which seeks to manage exposure to loss through favorable risk selection and diversification, its management of claims, its use of reinsurance and its ability to manage its expense ratio, which it accomplishes through economies of scale and its management of acquisition costs and other underwriting expenses. The Company believes that underwriting gain (loss) provides investors with a valuable measure of before tax profitability derived from underwriting activities, which are managed separately from the Company's investing activities. A reconciliation of underwriting gain (loss) to net income for Property & Casualty Commercial and Consumer Markets is set forth in their respective discussions herein.

Written and earned premiums

Written premium is a statutory accounting financial measure which represents the amount of premiums charged for policies issued, net of reinsurance, during a fiscal period. Earned premium is a U.S. GAAP and statutory measure. Premiums are considered earned and are included in the financial results on a pro rata basis over the policy period. Management believes that written premium is a performance measure that is useful to investors as it reflects current trends in the Company's sale of property and casualty insurance products. Written and earned premium are recorded

net of ceded reinsurance premium.

Traditional life insurance type products, such as those sold by Group Benefits, collect premiums from policyholders in exchange for financial protection for the policyholder from a specified insurable loss, such as death or disability.

These premiums together with net investment income earned from the overall investment strategy are used to pay the contractual obligations under these insurance contracts. Two major factors, new sales and persistency, impact premium growth. Sales can increase or decrease in a given year based on a number of factors, including but not limited to, customer demand for the Company's product offerings, pricing competition, distribution channels and the Company's reputation and ratings. Persistency refers to the percentage of policies remaining in-force from year-to-year.

Equity securities, AFS, at fair value	862	1.1	% 890	0.8	%
Mortgage loans	5,575	6.9	% 6,711	6.4	%
Policy loans, at outstanding balance	1,415	1.8	% 1,997	1.9	%
Limited partnerships and other alternative investments	3,059	3.8	% 3,015	2.9	%
Other investments [1]	647	0.8	% 1,114	1.1	%
Short-term investments	4,146	5.1	% 4,581	4.3	%
Total investments excluding equity securities, trading	80,721	100	% 105,317	100	%
Equity securities, trading, at fair value [2]	22,343		28,933		
Total investments	\$103,064		\$134,250		

[1] Primarily relates to derivative instruments.

As of September 30, 2013 and December 31, 2012, approximately \$22.3 billion and \$27.1 billion, respectively, of equity securities, trading, support Japan variable annuities. Those equity securities, trading, were invested in [2] mutual funds, which, in turn, invested in the following asset classes as of September 30, 2013 and December 31, 2012, respectively, Japan equity 21% and 20%, Japan fixed income (primarily government securities) 15% and 15%, global equity 22% and 21%, global government bonds 41% and 43%, and cash and other 1% and 1%.

Total investments decreased since December 31, 2012, principally due to the sale of the Retirement Plans and Individual Life businesses resulting in the transfer of invested assets with a carrying value of \$17.3 billion in January 2013. Refer to Note 2 - Business Dispositions of the Notes to Condensed Consolidated Financial Statements for further discussion of this transaction. In addition, as a result of the announced sale of the U.K. variable annuity business, HLIL, the carrying values of the assets and liabilities supporting this business have been classified as held for sale on the Condensed Consolidated Balance Sheet as of September 30, 2013. For further discussion of this transaction, see Note 2 - Business Dispositions of Notes to Condensed Consolidated Financial Statements. As of September 30, 2013, fixed maturities, AFS and equity securities trading of \$469 and \$1.7 billion, respectively, are classified as assets held for sale in the Condensed Consolidated Balance Sheet and are excluded from the table above. The remaining decrease in total invested assets is primarily due to a decrease in fixed maturities, AFS, equity securities, trading, short-term investments, and other investments. The decrease in fixed maturities, AFS was due to a decline in valuations due to an increase in interest rates, hedging activity including collateral movements, reductions in dollar rolls and capital management. The decline in equity securities, trading was primarily due to variable annuity policy surrenders and depreciation of the Japanese Yen as compared to the U.S. dollar, partially offset by equity market gains. The decrease in short-term investments is primarily attributable to a decline in derivative collateral held due to decreases in derivative market values. The decline in other investments was primarily related to the variable annuity hedge program, due to a decline in derivative market values, resulting from increases in equity market valuations and depreciation of the Japanese yen in relation to the euro and the U.S. dollar.

Total securities, AFS and other excluding limited partnerships and other alternative investments	\$766	4.1	\$1,000	4.2	\$2,328	4.1	\$3,037	4.3		

[1] Yields calculated using annualized net investment income (excluding income related to equity securities, trading) before investment expenses divided by the monthly average invested assets at cost, or adjusted carrying value, as applicable, excluding equity securities, trading, repurchase agreement and dollar roll collateral, and consolidated variable interest entity non-controlling interests. Yield calculations for the nine months ended September 30, 2013 exclude assets transferred due to the sale of the Retirement Plans and Individual Life businesses. Yield calculations for all periods exclude income and assets associated with the disposal of the HLIL business.

[2] Includes net investment income on short-term investments.

[3] Primarily includes income from derivatives that qualify for hedge accounting and hedge fixed maturities.

Three and nine months ended September 30, 2013 compared to the three and nine months ended September 30, 2012 Total net investment income declined primarily due to a decrease in asset levels as a result of the sale of the Retirement Plans and Individual Life businesses in January 2013, but also reflects a slight decline in yield. Refer to Note 2 - Business Dispositions of the Notes to Condensed Consolidated Financial Statements for further discussion of this transaction. This decline was partially offset by higher income from equity securities, trading, as a result of broad global equity market appreciation; as well as limited partnerships, due to underlying real estate and private equity funds selling underlying investments.

The annualized net investment income yield, excluding limited partnerships and other alternative investments, has declined to 4.1% or approximately 10 basis points in the third quarter of 2013 versus the third quarter of 2012 based upon the impacts of the divested Individual Life and Retirement Plans businesses. The invested assets transferred associated with the divested Individual Life and Retirement Plans businesses had a carrying value of \$17.3 billion and an average book yield, including the impact of associated derivatives, of approximately 5.0% and represent the vast majority of the estimated change in the net investment income yield. The average reinvestment rate for the nine months ended September 30, 2013 was approximately 3.7%, excluding treasury securities and mortgage backed securities related to dollar roll transactions (for further discussion on dollar roll transactions see Note 6 - Investments and Derivative Investments of Notes to Condensed Consolidated Financial Statements), which is slightly higher than the average yield of sales and maturities for the same period. Based upon current reinvestment rates, we expect the annualized net investment income yield, excluding limited partnerships and other alternative investments, for the full year 2013, to remain relatively consistent with the third quarter annualized net investment income yield. The estimated impact on net investment income is subject to change as the composition of the portfolio changes through normal portfolio management and trading activities and changes in market conditions.

Relates to the Japanese fixed annuity product (adjustment of product liability for changes in spot currency [1] exchange rates, related derivative hedging instruments, excluding net periodic coupon settlements, and Japan FVO securities).

[2] Primarily consists of transactional foreign currency re-valuation associated with the internal reinsurance of the Japan variable annuity business, which is offset in AOCI, gains and losses on non-qualifying derivatives.

Details on the Company's net realized capital gains and losses are as follows:

Gross gains and losses on sales

- Gross gains on sales for the three months ended September 30, 2013 were primarily due to gains on the sale of industrial corporate, RMBS, and ABS. Gross losses on sales for the three months ended September 30, 2013 were the result of losses on sales of U.S. treasury and other corporate securities due to rising interest rates. The sales were primarily as a result of management of duration and liquidity; as well as, progress towards sector allocation objectives. Gross gains and losses on sales for the nine months ended September 30, 2013 were predominately from the sale of the Retirement Plans and Individual Life businesses resulting in a gain of \$1.5 billion.
- Gross gains and losses on sales for three and nine months ended September 30, 2012 were predominately from sales of investment grade corporate securities, U.S. Treasuries and municipals bonds due to tactical repositioning of the portfolio.

Net OTTI losses

- For further information, see Other-Than-Temporary Impairments within the Investment Portfolio Risks and Risk Management section of the MD&A.

Variable annuity hedge program

- For the three and nine months ended September 30, 2013 the net gain related to the combined U.S. GMWB hedging program, which includes the U.S. GMWB product, reinsurance, and hedging derivatives, was primarily driven by gains of \$83 and \$186, respectively, due to favorable policyholder behavior largely related to increased surrenders, and gains of \$27 and \$63, respectively, due to the passage of time. Additional gains of \$75 related to the U.S. GMWB product for the three months ended September 30, 2013 were primarily due to liability assumption updates for lapses and withdrawal rates.

For the nine months ended September 30, 2013 the loss on the U.S. macro hedge program was primarily due to

- losses of \$98 related to an improvement in domestic equity markets, losses of \$44 due to passage of time, and losses of \$44 driven by an increase in long term interest rates.

For the three and nine months ended September 30, 2013 the losses associated with the international program were primarily driven by losses of \$271 and \$808, respectively, due to an improvement in global equity markets, and losses

of \$107 and \$505, respectively, due to a depreciation of the Japanese yen in relation to the euro.

- For the three and nine months ended September 30, 2012 the gain on U.S. GMWB related derivatives, net, was primarily due to liability model assumption updates of \$301 related to increased expenses and lower benefit utilization by policyholders offset by lower lapse rates, decreased domestic equity volatility gains of \$42 and \$73, respectively, and outperformance of the underlying actively managed funds as compared to their respective indices of \$25 and \$34, respectively.

- For the three and nine months ended September 30, 2012 the loss on the U.S. macro hedge program was primarily due to losses of \$47 and \$124, respectively, related to an increase in domestic equity markets, losses of \$49 and \$121, respectively, related to the passage of time, and losses of \$16 and \$56, respectively, related to a decrease in equity volatility.

Table of Contents

- For the three months ended September 30, 2012 the loss associated with the international program was primarily driven by losses of \$240 due to an improvement in global and domestic equity markets, partially offset by gains of \$91 due to an appreciation of the Japanese yen in relation to the euro and the U.S. dollar. For the nine months ended September 30, 2012 the loss associated with the international program was primarily driven by losses of \$574 due to an improvement in global and domestic equity markets, losses of \$202 due to depreciation of the Japanese yen in relation to the euro and the U.S. dollar, partially offset by gains of \$79 due to a decline in interest rates.

Other, net

- Other, net gain for the three months ended September 30, 2013 was primarily due to gains of \$35 on credit derivatives due to credit spread tightening, and gains of \$32 on interest rate derivatives driven by an increase in long term U.S. interest rates. These gains were partially offset by losses of \$18 on transactional foreign currency re-valuation associated with the internal reinsurance of the Japan variable annuity business, which is offset in AOCI, due to appreciation of the Japanese yen versus the U.S. dollar.

Other, net gain for the nine months ended September 30, 2013 was primarily due to gains of \$197 on transactional foreign currency re-valuation associated with the internal reinsurance of the Japan variable annuity business, which is offset in AOCI, due to depreciation of the Japanese yen versus the U.S. dollar. Additional gains of \$71 on interest derivatives were primarily associated with fixed rate bonds sold as part of the Individual Life and Retirement Plans business dispositions. For further information on the business dispositions, see Note 2.

- Other, net loss for the three months ended September 30, 2012 was primarily due to losses of \$72 on transactional foreign currency re-valuation associated with the internal reinsurance of the Japan variable annuity business, which is offset in AOCI, due to appreciation of the Japanese yen versus the U.S. dollar. Additional loss of \$31 on Japan 3Win foreign currency swaps was primarily due to the strengthening of the currency basis swap spread between U.S. dollar and Japanese yen and the decline in U.S. interest rates. These losses were primarily offset by gains of \$91 on credit derivatives driven by credit spread tightening.

- Other, net gain for the nine months ended September 30, 2012 was primarily due to gains of \$242 on credit derivatives driven by credit spread tightening, partially offset by losses of \$87 on Japan 3Win foreign currency swaps was primarily driven by the strengthening of the currency basis swap spread between U.S. dollar and Japanese yen and the decline in U.S. interest rates.

[1] Represents servicing revenues.

Three and nine months ended September 30, 2013 compared to the three and nine months ended September 30, 2012 Net income, as compared to the prior year periods, increased for the three and nine months ended September 30, 2013 driven primarily by improvements in underwriting results. For the three months ended September 30, 2013 underwriting results improved primarily due to lower losses and loss adjustment expenses before catastrophes partially offset by increased current accident year catastrophes and underwriting expenses. For the nine months ended September 30, 2013, underwriting results improved primarily due to lower current accident year losses before catastrophes.

Current accident year catastrophe losses for the three and nine months ended September 30, 2013 included thunderstorms and tornadoes in the Midwest and South. Current accident year catastrophe losses for the three and nine months ended September 30, 2012 included thunderstorms, hail and tornadoes in the Midwest, South and mid-Atlantic states.

Unfavorable prior year development, as compared to the prior year periods, increased for the three and nine months ended September 30, 2013. For information regarding prior accident years reserve development, including reserve (releases) strengthenings by reserve line, see the Property and Casualty Insurance Product Reserves, Net of Reinsurance section within Critical Accounting Estimates.

Earned premiums, as compared to the prior year periods, decreased for the three and nine months ended September 30, 2013 primarily due to decreases in middle market workers' compensation business, partially offset by increases in small commercial workers' compensation business. The decrease in middle market was driven by lower policy count retention and policies-in-force. The increase in small commercial was driven by favorable renewal premium due to higher earned pricing, partially offset by lower policy count retention.

Current accident year loss and loss adjustment expenses before catastrophes decreased for the three and nine months ended September 30, 2013 primarily driven by lower loss and loss adjustment expense ratios in workers' compensation and professional liability, and for the three month period, a lower loss and loss adjustment expense ratio in National Accounts and lower non-catastrophe property losses in Middle Market.

Net realized capital gains (losses), as compared to the prior year periods, decreased for the three and nine months ended September 30, 2013. For additional information, see the Investment Results section within Key Performance Measures and Ratios.

The effective tax rates in 2013 and 2012 differ from the U.S. Federal statutory rate of 35% primarily due to permanent differences related to investments in tax exempt securities. For further discussion of income taxes, see the Income Taxes section within Note 1 - Basis of Presentation and Significant Accounting Policies of the Notes to Condensed Consolidated Financial Statements.

Total	91.9	87.9	(4.0)	94.9	95.8	0.9

[1] Represents servicing revenues.

Three and nine months ended September 30, 2013 compared to the three and nine months ended September 30, 2012 Net income decreased for the three months and increased for the nine months ended September 30, 2013, relative to the comparable prior year periods. The decrease in the three months ended was primarily driven by current year catastrophes and lower favorable prior year development, partially offset by improved current accident year underwriting results before catastrophes. The increase in the nine months ended was primarily driven by improvements in current accident year underwriting results before catastrophes and by less severe current year catastrophes offset by lower favorable prior year development.

Current accident year catastrophe losses for the three and nine months ended September 30, 2013 were \$18, before tax, and \$186, before tax, respectively. In the three month period, catastrophes primarily included losses from wind and hail in Colorado and the Great Lakes states. In addition, the nine month period included a blizzard in the Texas panhandle and hail, tornadoes and wind in the Midwest. In 2012, catastrophes primarily included losses from severe thunderstorms and hail events in the South, Midwest and Mid-Atlantic states, as well as severe tornadoes and windstorms in the Midwest and South.

For information regarding prior accident years reserve development, see the Property and Casualty Insurance Product Reserves, Net of Reinsurance section within Critical Accounting Estimates.

Written premiums increased 3% for the three months and 2% for the nine months ended September 30, 2013, due to new business written premium growth in auto and home, primarily from the AARP Direct and AARP through agents distribution channels, improved policy count retention in auto and home for the nine months ended due to initiatives implemented over the last year, and an increase in renewal written pricing in auto and home.

Current accident year losses and loss adjustment expenses before catastrophes decreased for both the three and nine month periods. The current accident year loss and loss adjustment expense ratio before catastrophes for home decreased primarily due to favorable non-catastrophe weather and non-weather related claim frequency and earned pricing. The current accident year loss and loss adjustment expense ratio before catastrophes for auto decreased year over year due to earned pricing increases and moderate liability and physical damage loss cost trends.

Underwriting expenses increased for the three months ended September 30, 2013, due to higher marketing spend, while the related expense ratio remained flat due to higher earned premium. Underwriting expenses, and the related expense ratio, decreased for the nine months ended September 30, 2013, primarily due to reductions in service operation costs and lower commissions expense in the agency channel.

The effective tax rates in 2013 and 2012 differ from the U.S. Federal statutory rate of 35% primarily due to permanent differences related to investments in tax exempt securities. For further discussion of income taxes, see the Income Taxes section within Note 1 - Basis of Presentation and Significant Policies of the Notes to Condensed Consolidated Financial Statements.

Three and nine months ended September 30, 2013 compared to the three and nine months ended September 30, 2012
Net income for the three months ended September 30, 2013, as compared to the prior year period, was relatively flat. The net income (loss) declined for the nine months ended September 30, 2013, as compared to the prior year periods, primarily due to net asbestos and environmental reserve strengthening. As part of its annual ground-up asbestos and environmental reserve evaluations in the second quarter of 2013, the Company strengthened its associated reserves by \$130 and \$10, before tax, respectively. In 2012, the Company strengthened its net asbestos and environmental reserves by \$48 and \$8, before tax, respectively.

For information on net asbestos and environmental reserves, see Property & Casualty Other Operations Claims within the Property and Casualty Insurance Product Reserves, Net of Reinsurance section in Critical Accounting Estimates. The effective tax rates in 2013 and 2012 differ from the U.S. Federal statutory rate of 35% primarily due to permanent differences related to investments in tax exempt securities. For further discussion of income taxes, see the Income Taxes section within Note 1 - Basis of Presentation and Significant Policies of the Notes to Condensed Consolidated Financial Statements.

Three and nine months ended September 30, 2013 compared to the three and nine months ended September 30, 2012
Net income for the three months ended September 30, 2013, as compared to the prior year period, was flat. Favorable total benefits, losses and expenses were offset by unfavorable decreases in premiums and other considerations and net realized capital gains (losses). Net income for the nine months ended September 30, 2013, as compared to the prior year periods, improved primarily due to an increase in net realized capital gains (losses) and lower total benefits, losses and expenses. The favorable items were partially offset by a decrease in premiums and other considerations and lower net investment income.

The decrease in premiums was driven by the Company's continued pricing discipline on new sales and renewals to improve profitability, including the loss of our largest account due to pricing and other considerations, and management actions within the Association business.

The continued improvement in the loss ratio, for the nine months ended September 30, 2013, was primarily due to improved pricing on renewals, favorable long term disability recoveries and the emergence of favorability in the long term disability incidence rate, compared to the 2012 loss ratio which included unfavorable long term disability severity recorded in the first quarter of 2012. Additionally, the three months ending September 30, 2013 included the effect of updating reserve assumptions for claims recoveries and offsets which improved the third quarter 2013 loss

ratio by 1.3 points.

Increased net realized capital gains (losses) was primarily due to trading gains on corporate securities. Insurance operating costs and other expenses declined, as compared to prior year, due to lower commission payments as a result of overall lower premium.

The increase in Group Benefits' after-tax margin, excluding buyouts and net realized capital gains (losses), was primarily due to lower benefits, losses and expenses. This was offset by the impact of lower premiums and other considerations and net investment income.

The effective tax rates in 2013 and 2012 differ from the U.S. Federal statutory rate of 35% primarily due to permanent differences related to investments in tax exempt securities. For further discussion of income taxes, see the Income Taxes section within Note 1 - Basis of Presentation and Significant Accounting Policies of the Notes to Condensed Consolidated Financial Statements.

Total Assets Under Management	\$92,397	\$88,121	5 %	\$92,397	\$88,121	5 %	
Average Assets Under Management	\$90,953	\$87,176	4 %	90,022	86,830	4 %	

[1] Includes compensation to servicing intermediaries of approximately \$5 and \$15 for the three and nine months ended September 30, 2013, respectively.

[2] Includes mutual funds offered within 529 college savings plans previously categorized as Other.

[3] Includes mutual funds offered within employee directed retirement plans including on-going business related to the Company's Retirement Plans and Individual Life businesses sold in January 2013.

[4]

Includes an institutional redemption as well as a portfolio rebalance at a key distributor, together totaling \$2.5 billion in the nine months ended September 30, 2013.

[5] Includes Company-sponsored mutual fund assets held in separate accounts supporting variable insurance and investment products.

ROA, core earnings	8.0	8.7	(8)%	8.6	8.9	(3)%

Three and nine months ended September 30, 2013 compared to the three and nine months ended September 30, 2012 Net income, as compared to the prior year periods, increased for the three and nine months ended September 30, 2013 primarily due to increased fee income driven by higher average mutual funds assets under management. Higher variable distribution-related expenses and increased marketing and advertising expenses related to a new advertising campaign mostly offset the increase in fee income during the three and nine months ended September 30, 2013. Average AUM during the three and nine months ended September 30, 2013 increased compared to the prior year periods reflecting increased sales and market appreciation, partially offset by net outflows. Annuity Mutual Fund Assets decreased during the three and nine months ended September 30, 2013 compared to prior periods as market appreciation was offset by outflows due to redemptions including surrender activity on Company-sponsored mutual fund assets held in separate accounts supporting U.S. variable insurance and investment products.

[1] For the three and nine months ended September 30, 2012 includes Retirement Plans total revenues of \$193 and \$592, respectively and net income (loss) of (\$7) and \$9, respectively. Also includes Individual Life total revenues of \$325 and \$1,039, respectively and net loss of \$(259) and \$(204), respectively for the three and nine months ended September 30, 2012.

[2] Includes investment income and mark-to-market effects of equity securities, trading, supporting the international variable annuity business, which are classified in net investment income with corresponding amounts credited to policyholders within benefits, losses and loss adjustment expenses.

[3]

Included in the balance is approximately \$(1.2) billion as of September 30, 2013 and \$(1.3) billion as of September 30, 2012 related to an intra-segment funding agreement which is eliminated in consolidation.

Other account value includes \$53.7 billion, \$14.2 billion, \$38.3 billion and \$1.7 billion as of September 30, 2013 and \$55.3 billion, \$13.1 billion, \$37.3 billion and \$1.8 billion at September 30, 2012 for the Retirement Plans, [4] Individual Life, Private Placement Life Insurance and the discontinued U.K variable annuity businesses, respectively. Account values associated with the Retirement Plans, Individual Life and the U.K. variable annuity businesses no longer generate asset-based fee income due to the sales of these businesses.

[5] Represents the loss from operations and sale of Hartford Life International Limited ("HLIL"). For additional information, see Note 14 Discontinued Operations of Notes to Condensed Consolidated Financial Statements.

Table of Contents

The Talcott Resolution Operating Summary includes the operating results for the Company's U.K. variable annuities business, as well as the Retirement Plans and Individual Life businesses sold in the first quarter of 2013. For further discussion of these transactions and the reinsurance loss on dispositions, see Note 14 - Discontinued Operations and Note 2 - Business Dispositions of Notes to Condensed Consolidated Financial Statements.

Three and nine months ended September 30, 2013 compared to the three and nine months ended September 30, 2012 Net income (loss), as compared to the prior year period, increased for the three months ended September 30, 2013. Net income for the three months ended September 30, 2013 was primarily driven by decreased total benefits, losses and expenses, including decreased restructuring costs, and a lower Unlock charge associated with the Company's annual policyholder behavior assumption study. Restructuring costs decreased by \$32, before tax, as compared with 2013. In addition, losses from the operations of the sold Retirement Plans and Individual Life businesses lowered net income (loss) in 2012. These improvements were largely offset by net realized capital losses in the variable annuity hedge program as compared with gains in the prior year period.

The Unlock charge decreased to \$104, before tax, for the three months ended September 30, 2013 from a charge of \$124 for the three months ended September 30, 2012. The Unlock charge includes a charge for assumption changes of \$166, before tax and \$158 before tax, for the three months ended September 30, 2013 and 2012, respectively, partially offset by a benefit due to market performance and other attributes in both periods. In connection with related liability assumption updates, an offsetting realized capital gain of \$75, before tax, driven by the decline in the value of benefit guarantees on U.S. GMWB products due to accelerated runoff of account values, is included in variable annuity hedge program losses for the three months ended September 30, 2013. Variable annuity hedge program losses for the three months ended September 30, 2013 were \$133, before tax, including international losses of \$286, compared to gains of \$96, including international losses of \$176, for the prior year period.

Net income (loss), as compared to the prior year period, decreased for the nine months ended September 30, 2013.

The net loss for the nine months ended September 30, 2013 was primarily driven by Unlock charges of \$881 million, before tax, during the current year period compared to \$18 million, before tax, in the prior year period. The Unlock charge for the nine months ended September 30, 2013 includes a charge of \$887, before tax, for hedge cost assumption changes resulting in the elimination of future estimated gross profits on the Japan variable annuity block based on increased costs associated with expanding the Japan variable annuity hedging program earlier in 2013. In addition, variable annuity hedge program losses for the nine months ended September 30, 2013 were \$1,162, before tax, including international losses of \$1,199, compared to losses of \$498, before tax, including international losses of \$657 for the prior year period.

For further discussion of investment results and the results of the variable annuity hedge program, see MD&A – Investment Results, Net Investment Income (Loss) and Net Realized Capital Gains (Losses) within Key Performance Measures and Ratios. For further discussion of Unlocks, see MD&A - Critical Accounting Estimates, Estimated Gross Profits Used in the Valuation and Amortization of Assets and Liabilities Associated with Variable Annuity and Other Universal Life-Type Contracts.

The 2013 and 2012 effective tax rates differ from the U.S. Federal statutory rate of 35% primarily due to permanent differences related to investments in separate account DRD. For further discussion of income taxes, see the Income Taxes section within Note 1 - Basis of Presentation and Significant Accounting Policies of Notes to Condensed Consolidated Financial Statements.

Account values for Talcott Resolution decreased to approximately \$222 billion at September 30, 2013 from approximately \$235 billion at September 30, 2012 due primarily to increased net outflows and negative currency translation impacts, offset by market value appreciation in variable annuities. For the three and nine months ended September 30, 2013 variable annuity net outflows increased by approximately \$3.1 billion and \$6.7 billion, respectively, as compared to the prior year period driven by increased net outflows in the Japan variable annuities as a result of market appreciation and the expiration of the surrender charge period as the block of business ages.

For the three and nine months ended September 30, 2013 the annualized full surrender rate on U.S. variable annuities rose to 20.3% and 17.5%, respectively, compared to 10.4% and 11.2%, respectively, for the three and nine months ended September 30, 2012. For the three and nine months ended September 30, 2013 the annualized full surrender rate

on Japan variable annuities rose to 30.8% and 24.6%, respectively, compared to 3.0% and 3.2%, respectively for the three and nine months ended September 30, 2012. Surrender activity in Japan has increased significantly over the past six months as market appreciation has resulted in an increased number of account values exceeding guaranteed amounts. The Company expects annuity account values and consequently earnings to continue to decline over time as fee income decreases due to surrenders, policyholder initiatives or potential transactions with third parties that will reduce the size of the related book of business.

Net loss	\$(28)\$196)86 %)	\$(461)\$970)52 %)

Fee income in the three and nine months ended September 30, 2012 represents the income associated with the sales of non-proprietary insurance products in the Company's broker-dealer subsidiaries that has an offsetting [1] commission expense in insurance operating costs and other expenses. As WFS was sold in November 2012, fee income and insurance operating costs and other expenses decreased accordingly in the three and nine months ended September 30, 2013.

Three and nine months ended September 30, 2013 compared to the three and nine months ended September 30, 2012 The net loss decreased for the three and nine months ended September 30, 2013 as compared to the prior year periods primarily due to a decrease in insurance operating costs and other expenses, a decrease in interest expense, the reinsurance loss on disposition of \$118 and, for the nine month period, a reduction in loss on extinguishment of debt, partially offset by a change to net realized capital losses.

Insurance operating costs and other expenses decreased primarily due to a benefit of \$57, before tax, for an insurance recovery from the

Company's insurers for past legal expenses associated with closed litigation and a benefit of \$19, before tax, from the resolution of items under the Company's spin-off agreement with its former parent company.

During the first quarter of 2013, the Company repurchased approximately \$800 of senior notes at a premium to the face amount of the then outstanding debt. During the second quarter of 2012, the Company repurchased all outstanding 10% fixed-to-floating rate junior subordinated debentures due 2068 with a \$1.75 billion aggregate principal amount held by Allianz. Loss on extinguishment of debt consists of the premium associated with repurchasing the debentures at an amount greater than the face amount, the write-off of the unamortized discount and debt issuance and other costs related to the repurchase transactions.

In both periods, net realized capital gains decreased due to higher long-term interest rates and global credit hedging losses due to increases in the equity market.

The overall decrease in the reinsurance loss on disposition for the nine months ended September 30, 2013 as compared to the prior year period consisted of the write-off of \$69, before tax, representing all of the goodwill held in Corporate allocated to the Retirement Plans business sold in the first quarter of 2013.

For a reconciliation of the tax provision at the U.S. Federal statutory rate of 35% to the provision (benefit) for income taxes, see the Income Taxes section of Note 1 - Basis of Presentation and Significant Accounting Policies of Notes to Condensed Consolidated Financial Statements.

Table of Contents

ENTERPRISE RISK MANAGEMENT

The Company has an enterprise risk management function (“ERM”) that is charged with providing analysis of the Company’s risks on an individual and aggregated basis and with ensuring that the Company’s risks remain within its risk appetite and tolerances. The Company has established the Enterprise Risk and Capital Committee (“ERCC”) that includes the Company’s CEO, Chief Financial Officer (“CFO”), Chief Investment Officer (“CIO”), Chief Risk Officer, the divisional Presidents and the General Counsel. The ERCC is responsible for managing the Company’s risks and overseeing the enterprise risk management program.

The Company categorizes its main risks as follows:

Insurance Risk

Operational Risk

Financial Risk

Refer to the MD&A in The Hartford’s 2012 Form 10-K Annual Report for an explanation of the Company’s Operational Risk.

Insurance Risk Management

The Company categorizes its insurance risks across both property-casualty and life products. The Company establishes risk limits to control potential loss and actively monitors the risk exposures as a percent of statutory surplus. The Company also uses reinsurance to transfer insurance risk to well-established and financially secure reinsurers.

Reinsurance as a Risk Management Strategy

The Company utilizes reinsurance to transfer risk to affiliated and unaffiliated insurers in order to limit its maximum losses and to diversify its exposures and provide statutory surplus relief. Such arrangements do not relieve the Company of its primary liability to policyholders. Failure of reinsurers to honor their obligations could result in losses to the Company. Reinsurance is used to manage aggregation of risk as well as to transfer certain risk to reinsurance companies based on specific geographic or risk concentrations.

The Company is a member of and participates in several reinsurance pools and associations. The Company evaluates the financial condition of its reinsurers and concentrations of credit risk. Reinsurance is placed with reinsurers that meet strict financial criteria established by the Company. In the first quarter of 2013, the Company entered into two reinsurance transactions upon completion of the sales of its Retirement Plans and Individual Life businesses. For further discussion of these transactions see Note 2 - Business Dispositions and Note 7 - Reinsurance of Notes to Condensed Consolidated Financial Statements.

Reinsurance for Catastrophes

The Company has several catastrophe reinsurance programs, including reinsurance treaties that cover property and workers' compensation losses aggregating from single catastrophe events. The following table summarizes the primary catastrophe treaty reinsurance coverage's that the Company has in place as of October 1, 2013:

Coverage	Treaty term	% of layer(s) reinsurance	Per occurrence limit	Retention
Principal property catastrophe program covering property catastrophe losses from a single event	1/1/2013 to 1/1/2014	90%	\$750	\$350
Reinsurance with the FHCF covering Florida Personal Lines property catastrophe losses from a single event	6/1/2013 to 6/1/2014	90%	124	[1] 47
Workers compensation losses arising from a single catastrophe event [2]	7/1/2013 to 7/1/2014	80%	350	100

The per occurrence limit on the FHCF treaty is \$124. Coverage is estimated based on the best available information from FHCF, which only includes updated retention multiples and payout factors for October 2013.

[1] Premiums will be available in the later part of October 2013 for the 6/1/13 to 6/1/14 treaty year and is based on the Company's election to purchase the required coverage from FHCF.

[2]

In addition, to the limit shown above, the workers compensation reinsurance includes a non-catastrophe, industrial accident layer, 80% of \$30 excess a \$20 retention.

Table of Contents

Reinsurance Recoverables

Reinsurance recoverables represent loss and loss adjustment expenses recoverable from a number of entities, including reinsurers and pools.

The components of the gross and net reinsurance recoverable for property-casualty insurance products are as follows:

	As of September 30, 2013	As of December 31, 2012
Gross reinsurance recoverable	\$2,996	\$3,022
Less: Allowance for uncollectible reinsurance	246	268
Net reinsurance recoverable	\$2,750	\$2,754

The components of the gross and net reinsurance recoverable for life insurance products are as follows:

	As of September 30, 2013	As of December 31, 2012
Gross reinsurance recoverable	\$20,365	\$1,912
Less: Allowance for uncollectible reinsurance	—	—
Net reinsurance recoverable	\$20,365	\$1,912

As of September 30, 2013, the Company has reinsurance recoverables from MassMutual and Prudential of \$9.5 billion and \$9.6 billion, respectively. These reinsurance recoverables are secured by invested assets held in trust for the benefit of the Company in the event of a default by the reinsurers. As of September 30, 2013, the fair value of assets held in trust securing the reinsurance recoverables from MassMutual and Prudential were \$9.4 billion and \$7.5 billion, respectively. As of September 30, 2013, the net reinsurance recoverable from Prudential represents approximately 11% of the Company's consolidated stockholders' equity. As of September 30, 2013, the Company has no other reinsurance-related concentrations of credit risk greater than 10% of the Company's stockholders' equity.

For further explanation of the Company's Insurance Risk Management strategy, see MD&A - Enterprise Risk Management - Insurance Risk Management in The Hartford's 2012 Form 10-K Annual Report.

Financial Risk Management

The Company identifies the following categories of financial risk:

• Liquidity Risk

• Interest Rate Risk

• Foreign Currency Exchange Risk

• Equity Risk

• Credit Risk

Financial risks include direct, and indirect risks to the Company's financial objectives coming from events that impact market conditions or prices. Financial risk also includes exposure to events that may cause correlated movement in multiple risk factors. The primary source of financial risks are the Company's general account assets and the liabilities which those assets back, together with the guarantees which the company has written over various liability products, particularly its portfolio of variable annuities. The Company assesses its financial risk on a U.S. GAAP, statutory and economic basis. The Hartford has developed a disciplined approach to financial risk management that is well integrated into the Company's underwriting, pricing, hedging, claims, asset and liability management, new product, and capital management processes. Consistent with its risk appetite, the Company establishes financial risk limits to control potential loss. Exposures are actively monitored, and mitigated where appropriate. The Company uses various risk management strategies, including reinsurance and over-the-counter and exchange traded derivatives to counterparties meeting the appropriate regulatory and due diligence requirements.

Table of Contents

Liquidity Risk

Liquidity risk is the risk to current or prospective earnings or capital arising from the Company's inability or perceived inability to meet its contractual cash obligations at the legal entity level when they come due over given time horizons without incurring unacceptable costs and without relying on uncommitted funding sources. Liquidity risk includes the inability to manage unplanned increases or accelerations in cash outflows, decreases or changes in funding sources, and changes in market conditions that affect the ability to liquidate assets quickly to meet obligations with minimal loss in value. Components of liquidity risk include funding risk, company specific liquidity risk and market liquidity risk. Funding risk is the gap between sources and uses of cash under normal and stressed conditions taking into consideration structural, regulatory and legal entity constraints. Changes in institution-specific conditions that affect the Company's ability to sell assets or otherwise transact business without incurring a significant loss in value is company specific liquidity risk. Changes in general market conditions that affect the institution's ability to sell assets or otherwise transact business without incurring a significant loss in value is market liquidity risk.

The Company has defined ongoing monitoring and reporting requirements to assess liquidity across the enterprise. The Company measures and manages liquidity risk exposures and funding needs within prescribed limits and across legal entities, business lines and currencies, taking into account legal, regulatory and operational limitations to the transferability of liquidity. The Company also monitors internal and external conditions, identifies material risk changes and emerging risks that may impact liquidity. The Company's CFO has primary responsibility for liquidity risk.

For further discussion on liquidity see the section on Capital Resources and Liquidity.

Interest Rate Risk

Interest rate risk is the risk of financial loss due to adverse changes in the value of assets and liabilities arising from movements in interest rates. Interest rate risk encompasses exposures with respect to changes in the level of interest rates, the shape of the term structure of rates and the volatility of interest rates. Interest rate risk does not include exposure to changes in credit spreads. The Company has exposure to interest rates arising from its fixed maturity securities, interest sensitive liabilities and discount rate assumptions associated with the Company's pension and other post retirement benefit obligations.

An increase in interest rates from current levels is generally a favorable development for the Company. Interest rate increases are expected to provide additional net investment income, reduce the cost of the variable annuity hedging program, limit the potential risk of margin erosion due to minimum guaranteed crediting rates in certain Talcott Resolution products and, if sustained, could reduce the Company's prospective pension expense. Conversely, if long-term interest rates rise dramatically, certain Talcott Resolution businesses may be exposed to disintermediation risk. Disintermediation risk refers to the risk that policyholders will surrender their contracts in a rising interest rate environment requiring the Company to liquidate assets in an unrealized loss position. In conjunction with the interest rate risk measurement and management techniques, certain of Talcott Resolution's fixed income product offerings have market value adjustment provisions at contract surrender. An increase in interest rates may also impact the Company's tax planning strategies and in particular its ability to utilize tax benefits to offset certain previously recognized realized capital losses.

A decline in interest rates results in certain mortgage-backed and municipal securities being more susceptible to paydowns and prepayments or calls. During such periods, the Company generally will not be able to reinvest the proceeds at comparable yields. Lower interest rates will also likely result in lower net investment income, increased hedging costs associated with variable annuities and, if declines are sustained for a long period of time, it may subject the Company to reinvestment risks, higher pension costs expense and possibly reduced profit margins associated with guaranteed crediting rates on certain Talcott Resolution products. Conversely, the fair value of the investment portfolio will increase when interest rates decline and the Company's interest expense will be lower on its variable rate debt obligations.

The Company manages its exposure to interest rate risk by constructing investment portfolios that maintain asset allocation limits and asset/liability duration matching targets which may include the use of derivatives. The Company analyzes interest rate risk using various models including parametric models and cash flow simulation under various market scenarios of the liabilities and their supporting investment portfolios, which may include derivative

instruments. Measures the Company uses to quantify its exposure to interest rate risk inherent in its invested assets and interest rate sensitive liabilities include duration, convexity and key rate duration. Duration is the price sensitivity of a financial instrument or series of cash flows to a parallel change in the underlying yield curve used to value the financial instrument or series of cash flows. For example, a duration of 5 means the price of the security will change by approximately 5% for a 100 basis point change in interest rates. Convexity is used to approximate how the duration of a security changes as interest rates change in a parallel manner. Key rate duration analysis measures the price sensitivity of a security or series of cash flows to each point along the yield curve and enables the Company to estimate the price change of a security assuming non-parallel interest rate movements.

Table of Contents

To calculate duration, convexity, and key rate durations, projections of asset and liability cash flows are discounted to a present value using interest rate assumptions. These cash flows are then revalued at alternative interest rate levels to determine the percentage change in fair value due to an incremental change in the entire yield curve for duration and convexity, or a particular point on the yield curve for key rate duration. Cash flows from corporate obligations are assumed to be consistent with the contractual payment streams on a yield to worst basis. Yield to worst is a basis that represents the lowest potential yield that can be received without the issuer actually defaulting. The primary assumptions used in calculating cash flow projections include expected asset payment streams taking into account prepayment speeds, issuer call options and contract holder behavior. Mortgage-backed and asset-backed securities are modeled based on estimates of the rate of future prepayments of principal over the remaining life of the securities. These estimates are developed by incorporating collateral surveillance and anticipated future market dynamics. Actual prepayment experience may vary from these estimates.

The Company is also exposed to interest rate risk based upon the discount rate assumption associated with the Company's pension and other postretirement benefit obligations. The discount rate assumption is based upon an interest rate yield curve comprised of bonds rated Aa with maturities primarily between zero and thirty years. For further discussion of interest rate risk associated with the benefit obligations, see the Critical Accounting Estimates Section of the MD&A under Pension and Other Postretirement Benefit Obligations and Note 18 of the Notes to Consolidated Financial Statements in The Hartford's 2012 Form 10-K Annual Report. In addition, management evaluates performance of certain Talcott Resolution products based on net investment spread which is, in part, influenced by changes in interest rates. For further discussion, see the Talcott Resolution section of the MD&A.

Foreign Currency Exchange Risk

Foreign currency exchange risk is defined as the risk of financial loss due to changes in the relative value between currencies. The Company's foreign currency exchange risk is related to non-U.S. dollar denominated liability contracts, including its GMDB, GMAB, GMWB and GMIB benefits associated with its Japanese variable annuities, the investment in and net income of the Japanese operations, non-U.S. dollar denominated investments, which primarily consist of fixed maturity investments, and a yen denominated individual fixed annuity product. In addition, the Company's Talcott Resolution operations issued non-U.S. dollar denominated funding agreement liability contracts. A portion of the Company's foreign currency exposure is mitigated through the use of derivatives.

Liabilities

The Company manages the market risk, including foreign currency exchange risk, associated with the guaranteed benefits related to the Japanese variable annuities through its comprehensive International Hedge Program. For more information on the International Hedge Program, including the foreign currency exchange risk sensitivity analysis, see the Variable Product Guarantee Risks and Risk Management section.

The yen denominated individual fixed annuity product was written by Hartford Life Insurance K.K. ("HLIKK"), a wholly-owned Japanese subsidiary of Hartford Life, Inc. ("HLI"), and subsequently reinsured to Hartford Life Insurance Company, a U.S. dollar based wholly-owned indirect subsidiary of HLI. The underlying investment involves investing in U.S. securities markets, which offer favorable credit spreads. The yen denominated fixed annuity product ("yen fixed annuities") is recorded in the consolidated balance sheets with invested assets denominated in dollars while policyholder liabilities are denominated in yen and converted to U.S. dollars based upon the September 30, 2013 yen to U.S. dollar spot rate. The difference between U.S. dollar denominated investments and yen denominated liabilities exposes the Company to currency risk. The Company manages this currency risk associated with the yen fixed annuities primarily with pay variable U.S. dollar and receive fixed yen currency swaps.

The Company's Talcott Resolution operations issued non-U.S. dollar denominated funding agreement liability contracts. The Company hedges the foreign currency risk associated with these liability contracts with currency rate swaps.

Fixed Maturity Investments

The risk associated with the non-U.S. dollar denominated fixed maturities relates to potential decreases in value and income resulting from unfavorable changes in foreign exchange rates. In order to manage currency exposures, the Company enters into foreign currency swaps to hedge the variability in cash flows as the fair value associated with certain foreign denominated fixed maturities decline. These foreign currency swaps are structured to match the foreign

currency cash flows of the hedged foreign denominated securities.

Table of Contents

Equity Risk

Variable Product Guarantee Risks and Risk Management

The Company's variable products are significantly influenced by the U.S., Japanese, and other equity markets. Increases or declines in equity markets impact certain assets and liabilities related to the Company's variable products and the Company's earnings derived from those products. The Company's variable products include variable annuity contracts and mutual funds.

Generally, declines in equity markets will:

- reduce the value of assets under management and the amount of fee income generated from those assets;
- reduce the value of equity securities trading supporting the international variable annuities, the related policyholder funds and benefits payable, and the amount of fee income generated from those variable annuities;
- increase the liability for GMWB benefits resulting in realized capital losses;
- increase the value of derivative assets used to hedge product guarantees resulting in realized capital gains;
- increase the costs of the hedging instruments we use in our hedging program;
- increase the Company's net amount at risk for GMDB and GMIB benefits;
- decrease the Company's actual gross profits, resulting in increased DAC amortization;
- increase the amount of required assets to be held backing variable annuity guarantees to maintain required regulatory reserve levels and targeted risk based capital ratios; and
- decrease the Company's estimated future gross profits. See Estimated Gross Profits Used in the Valuation and Amortization of Assets and Liabilities Associated with Variable Annuity and Other Universal Life-Type Contracts within the Critical Accounting Estimates section of the MD&A for further information.

Generally, increases in equity markets will reduce the value of the hedge derivative assets, resulting in realized capital losses, and will generally have the inverse impact of those listed above. For additional information, see Risk Hedging - Variable Annuity Hedging Program section.

Variable Annuity Guaranteed Benefits

The majority of the Company's U.S., Japan, and U.K. variable annuities include optional living benefit and guaranteed minimum death benefit features. The net amount at risk ("NAR") is generally defined as the guaranteed minimum benefit amount in excess of the contract holder's current account value. Variable annuity account values with guarantee features were \$86.0 billion and \$94.4 billion as of September 30, 2013 and December 31, 2012, respectively.

The following table summarizes the account values of the Company's U.S., Japan and U.K. variable annuities with guarantee features and the NAR split between various guarantee features (retained net amount at risk does not take into consideration the effects of the variable annuity hedge programs currently in place):

Total Variable Annuity Guarantees

As of September 30, 2013

(\$ in billions)	Account Value	Gross Net Amount at Risk	Retained Net Amount at Risk	% of Contracts In the Money [4]	% In the Money [4] [5]	
U. S. Variable Annuity [1]						
GMDB [2]	\$61.5	\$4.7	\$1.2	22	% 19	%
GMWB	30.9	0.2	0.2	9	% 9	%
Japan Variable Annuity [1]						
GMDB	22.8	1.6	1.3	56	% 9	%
GMIB [3]	21.1	0.5	0.5	47	% 5	%
U.K. Variable Annuity [1]						
GMDB	1.7	—	—	100	% 1	%
GMWB	1.6	—	—	21	% 5	%

As a result of the announced sale of the U.K. variable annuity business, HLIL, the carrying values of the assets and liabilities supporting this business have been classified as held for sale in the Condensed Consolidated Balance Sheet as of September 30, 2013. For further discussion of this transaction, see Note 2 - Business Dispositions of Notes to

Condensed Consolidated Financial Statements.

Table of ContentsTotal Variable Annuity Guarantees
As of December 31, 2012

(\$ in billions)	Account Value	Gross Net Amount at Risk	Retained Net Amount at Risk	% of Contracts In the Money [4]	% In the Money [4] [5]	
U. S. Variable Annuity [1]						
GMDB [2]	\$64.8	\$6.6	\$2.2	48	% 13	%
GMWB	34.2	0.7	0.5	23	%9	%
Japan Variable Annuity [1]						
GMDB	27.7	5.7	4.8	97	% 16	%
GMIB [3]	26.0	3.3	3.3	97	%12	%
UK Variable Annuity [1]						
GMDB	1.9	—	—	100	%2	%
GMWB	1.7	—	—	24	%7	%

Policies with a guaranteed living benefit (a GMWB in the US or UK, or a GMIB in Japan) also have a guaranteed death benefit. The net amount at risk (“NAR”) for each benefit is shown; however these benefits are not additive.

[1] When a policy terminates due to death, any NAR related to GMWB or GMIB is released. Similarly, when a policy goes into benefit status on a GMWB or, by contract, the GMDB NAR is reduced to zero. When a policy goes into benefit status on a GMIB, its GMDB NAR is released

[2] Excludes group annuity contracts with GMDB benefits.

[3] Includes small amount of GMWB and GMAB

[4] Excludes reinsured contracts.

[5] For all contracts that are “in the money”, this represents the percentage by which the average contract was in the money.

Many policyholders with a GMDB also have a GMWB in the U.S. or GMIB in Japan. Policyholders that have a product that offer both guarantees can only receive the GMDB or the GMIB benefit in Japan or the GMDB or GMWB in the U.S. The GMDB NAR disclosed in the tables above is a point in time measurement and assumes that all participants utilize the GMDB benefit on that measurement date. For additional information on the Company’s GMDB liability, see Note 9 - Separate Accounts, Death Benefits and Other Insurance Benefit Features of Notes to Condensed Consolidated Financial Statements.

The Company expects to incur these payments in the future only if the policyholder has an “in the money” GMWB at their death or their account value is reduced to a specified level, through contractually permitted withdrawals and/or market declines. If the account value is reduced to the specified level, the contract holder will receive an annuity equal to the guaranteed remaining benefit (“GRB”). For the Company’s “life-time” GMWB products, this annuity can continue beyond the GRB. As the account value fluctuates with equity market returns on a daily basis and the “life-time” GMWB payments can exceed the GRB, the ultimate amount to be paid by the Company, if any, is uncertain and could be significantly more or less than the Company’s current carried liability. For additional information on the Company’s GMWB liability, see Note 5 - Fair Value Measurements of Notes to Condensed Consolidated Financial Statements.

Table of Contents

For GMIB contracts, in general, the policyholder has the right to elect to annuitize benefits, beginning (for certain products) on the tenth or fifteenth anniversary year of contract commencement, receive lump sum payment of the then current account value, or remain in the variable sub-account. For GMIB contracts, if the policyholder makes the annuitization election, the policyholder is entitled to receive the original investment value over a 10- to 15- year annuitization period. If the policyholder defers this election, the policyholder has the right to revisit the election annually on the policy anniversary date. A small percentage of the contracts first became eligible to elect annuitization in the third quarter of 2013, and another small percentage first become eligible in the fourth quarter of 2013. The remainder of the contracts will first become eligible to elect annuitization from 2014 to 2022. Because policyholders have various contractual rights to defer their annuitization election, the period over which annuitization election can take place is subject to policyholder behavior and therefore indeterminate. In addition, upon annuitization the contractholder surrenders access to the account value and the account value is transferred to the Company's general account where it is invested and the additional investment proceeds are used towards payment of the original investment value. If the original investment value exceeds the account value upon annuitization then the contract is "in the money". As of September 30, 2013, 89% of retained NAR is reinsured to an affiliate of The Hartford. For additional information on the Company's GMIB liability, see Note 9 - Separate Accounts, Death Benefits and Other Insurance Benefit Features of Notes to Condensed Consolidated Financial Statements.

The following table represents the timing of account values eligible for annuitization under the Japan GMIB as well as the NAR. The account values reflect 100% annuitization at the earliest point allowed by the contract and no adjustments for future market returns and policyholder behaviors. Future market returns, changes in the value of the Japanese yen and policyholder behaviors will impact account values eligible for annuitization in the years presented.

	As of September 30, 2013	
	GMIB [1]	
(\$ in billions)	Account Value	Net Amount at Risk
2013	\$0.1	\$—
2014	2.7	—
2015	5.3	—
2016	2.2	0.1
2017	2.5	0.2
2018 & beyond [2]	5.8	0.1
Total	\$18.6	\$0.4

[1] Excludes certain non-GMIB living benefits of \$2.5 billion of account value and \$0.10 billion of NAR.

[2] In 2018 & beyond, \$2.20 billion of the \$5.80 billion is primarily associated with account value that is eligible in 2021.

Variable Annuity Market Risk Exposures

The following table summarizes the broad Variable Annuity Guarantees offered by the Company and the market risks to which the guarantee is most exposed from a U.S. GAAP accounting perspective.

Variable Annuity Guarantees [1]	U.S. GAAP Treatment [1]	Primary Market Risk Exposures [1]
U.S. Variable Guarantees		
GMDB	Accumulation of the portion of fees required to cover expected claims, less Equity Market Levels accumulation of actual claims paid	
GMWB	Fair Value	Equity Market Levels / Implied Volatility / Interest Rates
For Life Component of GMWB	Accumulation of the portion of fees required to cover expected claims, less Equity Market Levels accumulation of actual claims paid	
International Variable Guarantees		

GMDB & GMIB	Accumulation of the portion of fees required to cover expected claims, less accumulation of actual claims paid	Equity Market Levels / Interest Rates / Foreign Currency
GMWB	Fair Value	Equity Market Levels / Implied Volatility / Interest Rates / Foreign Currency
GMAB	Fair Value	Equity Market Levels / Implied Volatility / Interest Rates / Foreign Currency

[1] Each of these guarantees and the related U.S. GAAP accounting volatility will also be influenced by actual and estimated policyholder behavior.

Table of Contents

Risk Hedging

Variable Annuity Hedging Program

The Company's variable annuity hedging is primarily focused on reducing the economic exposure to market risks associated with guaranteed benefits that are embedded in our global VA contracts through the use of reinsurance and capital market derivative instruments. The variable annuity hedging also considers the potential impacts on Statutory accounting results.

Reinsurance

The Company uses reinsurance for a portion of contracts with GMWB riders issued prior to the third quarter of 2003 and GMWB risks associated with a block of business sold between the third quarter of 2003 and the second quarter of 2006. The Company also uses reinsurance for a majority of the GMDB issued in the U.S. and a portion of the GMDB issued in Japan.

Capital Market Derivatives

GMWB Hedge Program

The Company enters into derivative contracts to hedge market risk exposures associated with the GMWB liabilities that are not reinsured. These derivative contracts include customized swaps, interest rate swaps and futures, and equity swaps, options, and futures, on certain indices including the S&P 500 index, EAFE index, and NASDAQ index. Additionally, the Company holds customized derivative contracts to provide protection from certain capital market risks for the remaining term of specified blocks of non-reinsured GMWB riders. These customized derivative contracts are based on policyholder behavior assumptions specified at the inception of the derivative contracts. The Company retains the risk for differences between assumed and actual policyholder behavior and between the performance of the actively managed funds underlying the separate accounts and their respective indices.

While the Company actively manages this dynamic hedging program, increased U.S. GAAP earnings volatility may result from factors including, but not limited to: policyholder behavior, capital markets, divergence between the performance of the underlying funds and the hedging indices, changes in hedging positions and the relative emphasis placed on various risk management objectives.

Macro Hedge Program

The Company's macro hedging program uses derivative instruments such as options and futures on equities and interest rates to provide protection against the statutory tail scenario risk arising from U.S., GMWB and GMDB liabilities, on the Company's statutory surplus. These macro hedges cover some of the residual risks not otherwise covered by specific dynamic hedging programs. Management assesses this residual risk under various scenarios in designing and executing the macro hedge program. The macro hedge program will result in additional U.S. GAAP earnings volatility as changes in the value of the macro hedge derivatives, which are designed to reduce statutory reserve and capital volatility, may not be closely aligned to changes in U.S. GAAP liabilities.

International Hedge Programs

The Company enters into derivative contracts to hedge market risk exposures associated with the guaranteed benefits which are embedded in the international variable annuity contracts. These derivative contracts include foreign currency forwards and options, interest rate swaps, swaptions and futures, and equity swaps, options, and futures on certain broadly traded global equity indices including the S&P500 index, Nikkei 225 index, Topix index, FTSE 100 index, Euro Stoxx 50 and DAX 30 index.

While the Company actively manages these dynamic hedging programs, increased U.S. GAAP earnings volatility may result from factors including, but not limited to: focus on reducing the economic exposure to market risks associated with guaranteed benefits, capital markets, changes in hedging positions and the relative emphasis placed on various risk management objectives.

Variable Annuity Hedging Program Sensitivities

The following table presents the accounting treatment of the underlying guaranteed living benefits and the related hedge assets by hedge program.

U.S. Programs		Japan Program			
GMWB		Macro			
Hedge Assets	Liabilities	Hedge Assets	Liabilities	Hedge Assets	Liabilities [1]

Fair Value Fair Value Fair Value Not Fair Value Fair Value Not Fair Value

The liabilities for Japan variable annuity are primarily not measured on a fair value basis. However there is an [1] immaterial portion of the international variable annuity with a GMWB or GMAB which is measured on a fair value basis.

114

Table of Contents

The following table presents our estimates of the potential instantaneous impacts from sudden market stresses related to equity market prices, interest rates, implied market volatilities, and foreign currency exchange rates. The sensitivities below represent: (1) the net estimated difference between the change in the fair value of GMWB liabilities and the underlying hedge instruments and (2) the estimated change in fair value of the hedge instruments for the macro and international hedge programs, before the impacts of amortization of DAC, and taxes. As noted in the table above, certain hedge assets are used to hedge liabilities that are not carried at fair value and will not have a liability offset in the U.S. GAAP sensitivity analysis. All sensitivities are measured as of September 30, 2013, and are related to the fair value of liabilities and hedge instruments in place as of September 30, 2013 for the Company's variable annuity hedge programs. The impacts presented in the table below are estimated individually and measured without consideration of any correlation among market risk factors.

As of September 30, 2013

U.S. GAAP Sensitivity

Analysis (pre Tax/DAC) [1]	U.S. Programs			Japan Program						
	GMWB			Macro						
Equity Market Return	-20	%-10	%+10	%-20	%-10	%+10	%-20	%-10	%+10	%
Potential Net Fair Value Impact	\$(1)	\$(3)	\$4	\$244	\$54	\$(21)	\$629	\$334	\$(343)	
Interest Rates	-50	-25	+25	-50 bps	-25	+25	-50 bps	-25 bps	+25	
	bps	bps	bps		bps	bps			bps	
Potential Net Fair Value Impact	\$(4)	\$(2)	\$(3)	\$20	\$10	\$(9)	\$159	\$70	\$(76)	
Implied Volatilities	+10	%+2	%-10	%+10	%+2	%-10	%+10	%+2	%-10	%
Potential Net Fair Value Impact	\$6	\$1	\$(12)	\$73	\$15	\$(81)	\$54	\$8	\$12	
Yen Strengthens +/ Weakens -	+20	%+10	%-10	%+20	%+10	%-10	%+20	%+10	%-10	%
Potential Net Fair Value Impact	N/A	N/A	N/A	N/A	N/A	N/A	\$788	\$262	\$(258)	

These sensitivities are based on the following key market levels as of September 30, 2013: 1) S&P of 1682; 2) 10yr [1]US swap rate of 2.91%; 3) S&P 10yr volatility of 25.34% and 4) FX rates of USDJPY @ 98.27 and EURJPY @ 132.93.

The above sensitivity analysis is an estimate and should not be used to predict the future financial performance of the Company's variable annuity hedge programs. The actual net changes in the fair value liability and the hedging assets illustrated in the above table may vary materially depending on a variety of factors which include but are not limited to:

- The sensitivity analysis is only valid as of the measurement date and assumes instantaneous changes in the capital market factors and no ability to rebalance hedge positions prior to the market changes;
- Changes to the underlying hedging program, policyholder behavior, and variation in underlying fund performance relative to the hedged index, which could materially impact the liability; and
- The impact of elapsed time on liabilities or hedge assets, any non-parallel shifts in capital market factors, or correlated moves across the sensitivities.

Financial Risk on Statutory Capital

Statutory surplus amounts and risk-based capital ("RBC") ratios may increase or decrease in any period depending upon a variety of factors and may be compounded in extreme scenarios or if multiple factors occur at the same time. At times the impact of changes in certain market factors or a combination of multiple factors on RBC ratios can be counterintuitive. Factors include:

-

In general, as equity market levels and interest rates decline, the amount and volatility of both our actual potential obligation, as well as the related statutory surplus and capital margin for death and living benefit guarantees associated with U.S. variable annuity contracts can be materially negatively affected, sometimes at a greater than linear rate. Other market factors that can impact statutory surplus, reserve levels and capital margin include differences in performance of variable subaccounts relative to indices and/or realized equity and interest rate volatilities. In addition, as equity market levels increase, generally surplus levels will increase. RBC ratios will also tend to increase when equity markets increase. However, as a result of a number of factors and market conditions, including the level of hedging costs and other risk transfer activities, reserve requirements for death and living benefit guarantees and RBC requirements could increase with rising equity markets, resulting in lower RBC ratios. Non-market factors, which can also impact the amount and volatility of both our actual potential obligation, as well as the related statutory surplus and capital margin, include actual and estimated policyholder behavior experience as it pertains to lapsation, partial withdrawals, and mortality.

Table of Contents

For guaranteed benefits (GMDB, GMIB, and GMWB) reinsured from our international operations to our U.S. insurance subsidiaries, or guaranteed by our U.S. insurance subsidiaries, the Company hedges its aggregate economic exposure to the various risks arising out of the product guarantees, with a focus on the underlying economics of the exposure to the entire Company, rather than the direct liability of the underlying issuer of the related products. The Company believes that hedging economic exposure in this manner is consistent with certain intercompany reinsurance agreements and guarantees, results in increased capital efficiency and results in a better risk profile than taking alternative approaches to hedging that might emphasize statutory or GAAP measures or considerations. The amount and volatility of both our actual potential obligation, as well as the related statutory surplus and capital margin can be materially affected by a variety of factors, both market and non-market. Market factors include declines in various equity market indices and interest rates, changes in value of the yen versus other global currencies, difference in the performance of variable subaccounts relative to indices, and increases in realized equity, interest rate, and currency volatilities. Non-market factors include actual and estimated policyholder behavior experience as it pertains to lapsation, withdrawals, mortality, and annuitization. Risk mitigation activities, such as hedging, may also result in material and sometimes counterintuitive impacts on statutory surplus and capital margin. Notably, as changes in these market and non-market factors occur, both our potential obligation and the related statutory reserves and/or required capital can increase or decrease at a greater than linear rate.

As the value of certain fixed-income and equity securities in our investment portfolio decreases, due in part to credit spread widening, statutory surplus and RBC ratios may decrease.

As the value of certain derivative instruments that do not get hedge accounting decreases, statutory surplus and RBC ratios may decrease.

The life insurance subsidiaries' exposure to foreign currency exchange risk exists with respect to non-U.S. dollar denominated assets and liabilities. Assets and liabilities denominated in foreign currencies are accounted for at their U.S. dollar equivalent values using exchange rates at the balance sheet date. As foreign currency exchange rates vary in comparison to the U.S. dollar, the remeasured value of those non-dollar denominated assets or liabilities will also vary, causing an increase or decrease to statutory surplus.

Our statutory surplus is also impacted by widening credit spreads as a result of the accounting for the assets and liabilities in our fixed market value adjusted ("MVA") annuities. Statutory separate account assets supporting the fixed MVA annuities are recorded at fair value. In determining the statutory reserve for the fixed MVA annuities, we are required to use current crediting rates in the U.S. and Japanese LIBOR in Japan. In many capital market scenarios, current crediting rates in the U.S. are highly correlated with market rates implicit in the fair value of statutory separate account assets. As a result, the change in statutory reserve from period to period will likely substantially offset the change in the fair value of the statutory separate account assets. However, in periods of volatile credit markets, such as we have experienced, actual credit spreads on investment assets may increase sharply for certain sub-sectors of the overall credit market, resulting in statutory separate account asset market value losses. As actual credit spreads are not fully reflected in the current crediting rates in the U.S. or Japanese LIBOR in Japan, the calculation of statutory reserves will not substantially offset the change in fair value of the statutory separate account assets resulting in reductions in statutory surplus. This has resulted and may continue to result in the need to devote significant additional capital to support the product.

With respect to our fixed annuity business, sustained low interest rates may result in a reduction in statutory surplus and an increase in National Association of Insurance Commissioners ("NAIC") required capital.

Most of these factors are outside of the Company's control. The Company's financial strength and credit ratings are significantly influenced by the statutory surplus amounts and RBC ratios of our insurance company subsidiaries. In addition, rating agencies may implement changes to their internal models that have the effect of increasing or decreasing the amount of statutory capital we must hold in order to maintain our current ratings.

The Company has reinsured approximately 18% of its risk associated with U.S. GMWB and 75% of its risk associated with the aggregate U.S. GMDB exposure. These reinsurance agreements serve to reduce the Company's exposure to changes in the statutory reserves and the related capital and RBC ratios associated with changes in the capital markets. The Company also continues to explore other solutions for mitigating the capital market risk effect on surplus, such as internal and external reinsurance solutions, modifications to our hedging program, changes in product design,

increasing pricing and expense management.

116

Table of Contents

Credit Risk

Credit risk is defined as the risk of financial loss due to uncertainty of obligor's or counterparty's ability or willingness to meet its obligations in accordance with agreed upon terms. The majority of the Company's credit risk is concentrated in its investment holdings but is also present in reinsurance and insurance portfolios. Credit risk is comprised of three major factors: the risk of change in credit quality, or credit migration risk; the risk of default; and the risk of a change in value of a financial instrument due to changes in credit spread that are unrelated to changes in obligor credit quality. A decline in creditworthiness is typically associated with an increase in an investment's credit spread, potentially resulting in an increase in other-than-temporary impairments and an increased probability of a realized loss upon sale.

The objective of the Company's enterprise credit risk management strategy is to identify, quantify, and manage credit risk on an aggregate portfolio basis and to limit potential losses in accordance with an established credit risk appetite.

The Company manages to its risk appetite by primarily holding a diversified mix of investment grade issuers and counterparties across its investment, reinsurance, and insurance portfolios. Potential losses are also limited within portfolios by diversifying across geographic regions, asset types, and sectors.

The Company manages a credit exposure from its inception to its maturity or sale. Both the investment and reinsurance areas have formulated procedures for counterparty approvals and authorizations. Although approval processes may vary by area and type of credit risk, approval processes establish minimum levels of creditworthiness and financial stability. Eligible credits are subjected to prudent and conservative underwriting reviews. Within the investment portfolio, private securities, such as commercial mortgages, and private placements, must be presented to their respective review committees for approval.

Credit risks are managed on an on-going basis through the use of various processes and analyses. At the investment, reinsurance, and insurance product levels, fundamental credit analyses are performed at the issuer/counterparty level on a regular basis. To provide a holistic review within the investment portfolio, fundamental analyses are supported by credit ratings, assigned by nationally recognized rating agencies or internally assigned, and by quantitative credit analyses. The Company utilizes a credit value at risk ("VaR") to measure default and migration risk on a monthly basis. Issuer and security level risk measures are also utilized. In the event of deterioration in credit quality, the Company maintains watch lists of problem counterparties within the investment and reinsurance portfolios. The watch lists are updated based on regular credit examinations and management reviews. The Company also performs quarterly assessments of probable expected losses in the investment portfolio. The process is conducted on a sector basis and is intended to promptly assess and identify potential problems in the portfolio and to recognize necessary impairments.

Credit risk policies at the enterprise and operation level ensure comprehensive and consistent approaches to quantifying, evaluating, and managing credit risk under expected and stressed conditions. These policies define the scope of the risk, authorities, accountabilities, terms, and limits, and are regularly reviewed and approved by senior management and ERM. Aggregate counterparty credit quality and exposure is monitored on a daily basis utilizing an enterprise-wide credit exposure information system that contains data on issuers, ratings, exposures, and credit limits. Exposures are tracked on a current and potential basis. Credit exposures are reported regularly to the ERCC and to the Finance, Investment and Risk Management Committee ("FIRMCo"). Exposures are aggregated by ultimate parent across investments, reinsurance receivables, insurance products with credit risk, and derivative counterparties. The credit database and reporting system are available to all key credit practitioners in the enterprise.

The Company exercises various and differing methods to mitigate its credit risk exposure within its investment and reinsurance portfolios. Some of the reasons for mitigating credit risk include financial instability or poor credit, avoidance of arbitration or litigation, future uncertainty, and exposure in excess of risk tolerances. Credit risk within the investment portfolio is most commonly mitigated through the use of derivative instruments or asset sales.

Counterparty credit risk is mitigated through the practice of entering into contracts only with highly creditworthy institutions and through the practice of holding and posting of collateral. Systemic credit risk is mitigated through the construction of high-quality, diverse portfolios that are subject to regular underwriting of credit risks. For further discussion of the Company's investment and derivative instruments, see the Portfolio Risks and Risk Management section and Note 6 - Investments and Derivative Instruments of Notes to Condensed Consolidated Financial

Statements. Further discussion on managing and mitigating credit risk from the use of reinsurance via an enterprise security review process, see the Reinsurance as a Risk Management Strategy within the Insurance Risk Management section.

As of September 30, 2013, the Company's exposure to a credit concentration risk of a single issuer greater than 10% of the Company's stockholders' equity, other than the U.S. government and certain U.S. government securities, was the Government of Japan and Prudential. The Government of Japan securities represented \$2.6 billion, or 14% of stockholders' equity, and 3% of total invested assets excluding equity securities, trading. The net reinsurance recoverable from Prudential of \$2.1 billion represented approximately 11% of stockholders' equity. For further discussion of reinsurance recoverables, see Note 7 - Reinsurance of Notes to Condensed Consolidated Financial Statements. For further discussion of concentration of credit risk, see the Concentration of Credit Risk section in Note 6 - Investments and Derivative Instruments of Notes to Consolidated Financial Statements in The Hartford's 2012 Form 10-K Annual Report.

Table of Contents

Derivative Instruments

The Company utilizes a variety of over-the-counter ("OTC"), OTC-cleared and exchange-traded derivative instruments as a part of its overall risk management strategy, as well as to enter into replication transactions. Derivative instruments are used to manage risk associated with interest rate, equity market, credit spread, issuer default, price, and currency exchange rate risk or volatility. Replication transactions are used as an economical means to synthetically replicate the characteristics and performance of assets that would otherwise be permissible investments under the Company's investment policies. For further information on the Company's use of derivatives, see Note 6 - Investments and Derivative Instruments of Notes to Condensed Consolidated Financial Statements. Derivative activities are monitored and evaluated by the Company's compliance and risk management teams and reviewed by senior management. In addition, the Company monitors counterparty credit exposure on a monthly basis to ensure compliance with Company policies and statutory limitations. The notional amounts of derivative contracts represent the basis upon which pay or receive amounts are calculated and are not reflective of credit risk. Downgrades to the credit ratings of The Hartford's insurance operating companies may have adverse implications for its use of derivatives including those used to hedge benefit guarantees of variable annuities. In some cases, downgrades may give derivative counterparties for OTC derivatives the unilateral contractual right to cancel and settle outstanding derivative trades or require additional collateral to be posted. In addition, downgrades may result in counterparties becoming unwilling to engage in additional OTC derivatives or may require collateralization before entering into any new trades. This will restrict the supply of derivative instruments commonly used to hedge variable annuity guarantees, particularly long-dated equity derivatives and interest rate swaps. Under these circumstances, the Company's operating subsidiaries could conduct hedging activity using a combination of cash and exchange-traded instruments, in addition to using the available OTC derivatives.

The Company uses various derivative counterparties in executing its derivative transactions. The use of counterparties creates credit risk that the counterparty may not perform in accordance with the terms of the derivative transaction. The Company has derivative counterparty exposure policies which limit the Company's exposure to credit risk. The Company's policies with respect to derivative counterparty exposure establishes market-based credit limits, favors long-term financial stability and creditworthiness of the counterparty and typically requires credit enhancement/credit risk reducing agreements. The Company minimizes the credit risk of derivative instruments by entering into transactions with high quality counterparties primarily rated A or better, which are monitored and evaluated by the Company's risk management team and reviewed by senior management. The Company also generally requires that derivative contracts, other than exchange-traded contracts, OTC-cleared swaps, certain forward contracts, and certain embedded and reinsurance derivatives, be governed by an International Swaps and Derivatives Association ("ISDA") Master Agreement, which is structured by legal entity and by counterparty and permits right of offset.

The Company has developed credit exposure thresholds which are based upon counterparty ratings. Credit exposures are measured using the market value of the derivatives, resulting in amounts owed to the Company by its counterparties or potential payment obligations from the Company to its counterparties. For purposes of daily derivative collateral maintenance, credit exposures are generally quantified based on the prior business day's market value and collateral is pledged to and held by, or on behalf of, the Company to the extent the current value of the derivatives exceed the contractual thresholds. In accordance with industry standard and the contractual agreements, collateral is typically settled on the next business day. The Company has exposure to credit risk for amounts below the exposure thresholds which are uncollateralized, as well as for market fluctuations that may occur between contractual settlement periods of collateral movements.

For the Company's domestic derivative programs, the maximum uncollateralized threshold for a derivative counterparty for a single legal entity is \$10. The Company currently transacts OTC derivatives in five legal entities that have a threshold greater than zero; and therefore the maximum combined threshold for a single counterparty across all legal entities that use derivatives is \$50. In addition, the Company may have exposure to multiple counterparties in a single corporate family due to a common credit support provider. As of September 30, 2013 for the Company's domestic derivative programs, the maximum combined threshold for all counterparties under a single credit support provider across all legal entities that use derivatives is \$100. Based on the contractual terms of the collateral agreements, these thresholds may be immediately reduced due to a downgrade in either party's credit rating.

The Company hedges a portion of its Japan exposures within the legal entity HLIKK. The counterparty credit exposures at HLIKK generally follow the maximum uncollateralized threshold of the domestic program, however, for one counterparty, maximum uncollateralized exposure is higher. This counterparty maintains credit ratings of A3 or better, and the Company actively monitors its credit standing. For further discussion, see the Derivative Commitments section of Note 11 - Commitments and Contingencies of the Notes to Condensed Consolidated Financial Statements. For the nine months ended September 30, 2013, the Company has incurred no losses on derivative instruments due to counterparty default.

In addition to counterparty credit risk, the Company may also introduce credit risk through the use of credit default swaps that are entered into to manage credit exposure. Credit default swaps involve a transfer of credit risk of one or many referenced entities from one party to another in exchange for periodic payments. The party that purchases credit protection will make periodic payments based on an agreed upon rate and notional amount, and for certain transactions there will also be an upfront premium payment. The second party, who assumes credit risk, will typically only make a payment if there is a credit event as defined in the contract and such payment will be typically equal to the notional value of the swap contract less the value of the referenced security issuer's debt obligation. A credit event is generally defined as default on contractually obligated interest or principal payments or bankruptcy of the referenced entity.

Table of Contents

The Company uses credit derivatives to purchase credit protection and to assume credit risk with respect to a single entity, referenced index, or asset pool. The Company purchases credit protection through credit default swaps to economically hedge and manage credit risk of certain fixed maturity investments across multiple sectors of the investment portfolio. The Company also enters into credit default swaps that assume credit risk as part of replication transactions. Replication transactions are used as an economical means to synthetically replicate the characteristics and performance of assets that would be permissible investments under the Company's investment policies. These swaps reference investment grade single corporate issuers and baskets, which include customized diversified portfolios of corporate issuers, which are established within sector concentration limits and may be divided into tranches which possess different credit ratings.

Investment Portfolio Risks and Risk Management

Investment Portfolio Composition

The following table presents the Company's fixed maturities, AFS, by credit quality. The average credit ratings referenced below and throughout this section are based on availability and the midpoint of the applicable ratings among Moody's, S&P, Fitch and Morningstar. If no rating is available from a rating agency, then an internally developed rating is used.

Fixed Maturities by Credit Quality

	September 30, 2013			December 31, 2012

BB & below	4,180	4,201	6.6	%4,452	4,284	5.0	%
Total fixed maturities	\$62,227	\$64,023	100	%\$79,747	\$85,922	100.0	%

The movement in the overall credit quality of the Company's portfolio was primarily attributable to the sale of the Retirement Plans and Individual Life businesses in January 2013. Refer to Note 2 - Business Dispositions of Notes to Condensed Consolidated Financial Statements for further discussion of this transaction. Excluding the impact of the sales, United States government and government agencies declined due to the sale of agency RMBS securities associated with dollar roll transactions, see Note 6 - Investments and Derivative Instruments of Notes to Condensed Consolidated Financial Statements. In addition, fixed maturities rated BB & below increased as a result of additional purchases of select high yield securities, which provide attractive risk adjusted returns. Fixed maturities, FVO, are not included in the above table. For further discussion on fair value option securities, see Note 5 - Fair Value Measurements of Notes to Condensed Consolidated Financial Statements.

Table of Contents

The following table presents the Company's AFS securities by type, as well as fixed maturities, FVO.

[1] Gross unrealized gains (losses) exclude the fair value of bifurcated embedded derivative features of certain securities. Changes in value are recorded in net realized capital gains (losses).

[2] Includes securities with pools of loans issued by the Small Business Administration which are backed by the full faith and credit of the U.S. government.

Table of Contents

The overall decrease in AFS and FVO securities is attributed to the sales of the Retirement Plans and Individual Life businesses in January 2013. Refer to Note 2 - Business Dispositions of the Notes to Condensed Consolidated Financial Statements for further discussion of this transaction. The Company continues to invest in a diversified portfolio that is primarily comprised of investment grade securities. During 2013, the Company sold agency RMBS associated with dollar roll transactions and increased allocations to emerging market and high yield securities, which offer attractive risk-adjusted returns. For further information on dollar rolls, see Note 6 - Investments and Derivative Instruments of Notes to Condensed Consolidated Financial Statements. The Company's AFS net unrealized gain position declined primarily due to an increase in interest rates and the disposition of the Retirement Plans and Individual Life businesses, as discussed above.

Fixed maturities, FVO, primarily represents Japan government securities supporting the Japan fixed annuity product, as well as securities containing an embedded credit derivative for which the Company elected the fair value option. The underlying credit risk of the securities containing credit derivatives are primarily investment grade CRE CDOs. For further discussion on fair value option securities, see Note 5 - Fair Value Measurements of Notes to Condensed Consolidated Financial Statements.

European Exposure

Certain economies within Europe continue to experience significant adverse economic conditions which have been precipitated in part by high unemployment rates and government debt levels. As a result, issuers in several European countries have experienced credit deterioration and rating downgrades and a reduced ability to access capital markets and/or higher borrowing costs. The concerns regarding the European countries have impacted the capital markets which, in turn, has made it more difficult to contain the European financial crisis. Austerity measures aimed at reducing sovereign debt levels, along with steps taken by the European Central Bank to provide liquidity and credit support to certain countries issuing debt, have helped to stabilize markets. In general, these economies continue to show signs of stabilization; however, growth still remains weak. Further contraction of gross domestic product along with elevated unemployment levels may continue to put pressure on sovereign debt.

The Company manages the credit risk associated with the European securities within the investment portfolio on an on-going basis using several processes which are supported by macroeconomic analysis and issuer credit analysis. For additional details regarding the Company's management of credit risk, see the Credit Risk section of this MD&A. The Company periodically considers alternate scenarios, including a base-case and both a positive and negative "tail" scenario that includes a partial or full break-up of the Eurozone. The outlook for key factors is evaluated, including the economic prospects for key countries, the potential for the spread of sovereign debt contagion, and the likelihood that policymakers and politicians pursue sufficient fiscal discipline and introduce appropriate backstops. Given the inherent uncertainty in the outcome of developments in the Eurozone, however, the Company has been focused on controlling both absolute levels of exposure and the composition of that exposure through both bond and derivative transactions.

The Company has limited direct European exposure, totaling only 5% of total invested assets as of September 30, 2013. The following tables present the Company's European securities included in the Securities by Type table above. The Company identifies exposures with the issuers' ultimate parent country of domicile, which may not be the country of the security issuer. Certain European countries were separately listed below, Greece, Italy, Ireland, Portugal and Spain ("GIIPS"), because of the current significant economic strains persisting in these countries. The criteria used for identifying the countries separately listed includes countries on the iTraxx SovX index with credit default spreads that exceed their respective index level as of September 30, 2013, an S&P credit quality rating of BBB+ or below and a gross domestic product ("GDP") greater than \$200 billion.

Europe exposure net of credit default swap protection [2]							\$5,767	\$6,752

[1] Includes amortized cost and fair value of \$49 as of September 30, 2013 and \$74 as of December 31, 2012 related to limited partnerships and other alternative investments, the majority of which is domiciled in the United Kingdom.

[2] Includes a notional amount and fair value of \$368 and \$0, respectively, as of September 30, 2013 and \$384 and \$(3), respectively, as of December 31, 2012 related to credit default swap protection. This includes a notional amount of \$70 and \$56 as of September 30, 2013 and December 31, 2012, respectively, related to single name corporate issuers in the financial services sector.

[3] The Company has credit default swap protection with a notional amount of \$20 related to the corporate and Equity, AFS Financial Services.

The Company's European investment exposure largely relates to corporate entities which are domiciled in or generate a significant portion of its revenue within the United Kingdom, Germany, the Netherlands and Switzerland. As of September 30, 2013 and December 31, 2012, exposure to the United Kingdom totaled approximately 2% of total invested assets. The majority of investments are U.S. dollar-denominated, and those securities that are pound and euro-denominated are hedged to U.S. dollars or support foreign-denominated liabilities. For a discussion of foreign currency risks, see the Foreign Currency Exchange Risk section of this MD&A. The Company does not hold any exposure to issuers in Greece or the Republic of Cyprus. As of September 30, 2013 and December 31, 2012, the Company's unfunded commitments associated with its investment portfolio was immaterial, and the weighted average credit quality of European investments was A-

As of September 30, 2013 and December 31, 2012, the Company's total credit default swaps that provide credit protection had a notional amount of \$368 and \$384, respectively, and a fair value of \$0 and \$(3), respectively. As of September 30, 2013 and December 31, 2012, all of the above referenced credit default swaps reference single name corporate and financial European issuers, of which \$20 related to the higher risk countries. The maturity dates of credit defaults swaps are primarily consistent with the hedged bonds. For further information on the use of the Company's credit derivatives and counterparty credit quality, see Derivative Instruments within the Credit Risk section of this MD&A.

Included in the Company's equity securities, trading, portfolio are investments in World Government Bond Index Funds ("WGBI funds"). The fair value of the WGBI funds at September 30, 2013 and December 31, 2012 was \$9.2 billion and \$11.8 billion, respectively. Because several of these funds are managed by third party asset managers, the Company does not have access to detailed holdings; however, the WGBI funds' investment mandate follows the Citigroup non-Japan World Government Fund Index ("the index") and includes allocations to certain European sovereign debt. The estimated fair value of the European allocation based upon the index benchmark allocation was \$4.2 billion and \$5.0 billion as of September 30, 2013 and December 31, 2012, respectively. Included in this

estimated European exposure were investments in Ireland, Italy and Spain with an estimated fair value of \$1.4 billion and \$1.6 billion as of September 30, 2013 and December 31, 2012, respectively. The index guidelines allow investment in issuers rated BBB- or higher by Standard and Poors or Baa3 or higher by Moodys. Should an issuer's credit rating fall below both of these rating levels they will be removed from the Index and the holdings will be liquidated. Because these assets support the international variable annuity business, changes in the value of these investments are reflected in the corresponding policyholder liabilities. The Company's indirect exposure to these holdings is through any guarantees issued on the underlying variable annuity policies. The Company has also entered into credit default swaps with a notional amount and fair value of \$350 and \$18, respectively, to hedge certain sovereign credit risks.

Table of Contents

Financial Services

The Company's exposure to the financial services sector is predominantly through banking and insurance institutions. The following table presents the Company's exposure to the financial services sector included in the Securities by Type table above.

	September 30, 2013			December 31, 2012		
	Amortized Cost	Fair Value	Net Unrealized	Amortized Cost	Fair Value	Net Unrealized
AAA	\$37	\$38	\$ 1	\$47	\$49	\$ 2
AA	485	513	28	1,039	1,125	86
A	2,659	2,727	68	3,539	3,763	224
BBB	1,984	1,932	(52)	2,537	2,563	26
BB & below	320	335	15	399	427	28
Total	\$5,485	\$5,545	\$ 60	\$7,561	\$7,927	\$ 366

The overall decrease in securities in the financial services sector is primarily attributed to the sales of the Retirement Plans and Individual Life businesses in January 2013. Refer to Note 2 - Business Dispositions of the Notes to Condensed Consolidated Financial Statements for further discussion of this transaction. Excluding the impact of the disposed businesses, the decline in value of financial service securities resulted from an increase in interest rates, partially offset by credit spread tightening, and sales as a result of portfolio management activities. Credit spreads for corporate financial services securities have narrowed during 2013 as the overall economy continues to improve.

Commercial Real Estate

The commercial real estate market continued to show signs of improving fundamentals such as firming property prices, increases in transaction volume and modestly easing financial conditions. While delinquencies still remain at elevated levels, they have improved since cycle highs. In spite of improved fundamentals, credit spreads have widened during the first nine months of 2013 as a result of concerns over the market impact of potential tapering of quantitative easing and a partial U.S. government shutdown.

The following table presents the Company's exposure to CMBS bonds by current credit quality and vintage year, included in the Securities by Type table above. Credit protection represents the current weighted average percentage of the outstanding capital structure subordinated to the Company's investment holding that is available to absorb losses before the security incurs the first dollar loss of principal and excludes any equity interest or property value in excess of outstanding debt.

[1] The vintage year represents the year the pool of loans was originated.

The Company also has exposure to CRE CDOs with an amortized cost and fair value of \$338 and \$397, respectively, as of September 30, 2013 and \$420 and \$384 respectively, as of December 31, 2012. These securities are comprised of diversified pools of commercial mortgage loans or equity positions of other CMBS securitizations. Although the Company does not plan to invest in this asset class going forward, we continue to monitor these investments as economic and market uncertainties regarding future performance impact market liquidity and security premiums. In addition to CMBS bonds and CRE CDOs, the Company has exposure to commercial mortgage loans as presented in the following table. These loans are collateralized by a variety of commercial properties and are diversified both geographically throughout the United States and by property type. These loans may be either in the form of a whole loan, where the Company is the sole lender, or a loan participation. Loan participations are loans where the Company has purchased or retained a portion of an outstanding loan or package of loans and participates on a pro-rata basis in collecting interest and principal pursuant to the terms of the participation agreement. In general, A-Note participations have senior payment priority, followed by B-Note participations and then mezzanine loan participations. As of September 30, 2013, loans within the Company's mortgage loan portfolio that have had extensions or restructurings, other than what is allowable under the original terms of the contract, are immaterial.

Commercial Mortgage Loans

	September 30, 2013			December 31, 2012		
	Amortized Cost [1]	Valuation Allowance	Carrying Value	Amortized Cost [1]	Valuation Allowance	Carrying Value
Agricultural	\$138	\$(8)	\$130	\$150	\$(8)	\$142
Whole loans	5,176	(9)	5,167	6,023	(10)	6,013
A-Note participations	192	—	192	255	—	255
B-Note participations	117	(50)	67	263	(50)	213
Mezzanine loans	19	—	19	88	—	88
Total	\$5,642	\$(67)	\$5,575	\$6,779	\$(68)	\$6,711

[1] Amortized cost represents carrying value prior to valuation allowances, if any.

The overall decrease in mortgage loans is attributed to the sales of the Retirement Plans and Individual Life businesses in January 2013. Refer to Note 2 - Business Dispositions of the Notes to Condensed Consolidated Financial Statements for further discussion of this transaction. Since December 31, 2012, the Company funded \$955 of commercial whole loans with a weighted average loan-to-value ("LTV") ratio of 63% and a weighted average yield of

3.59%. The Company continues to originate commercial whole loans within primary markets, office, industrial and multi-family, focusing on loans with strong LTV ratios and high quality property collateral. As of September 30, 2013, the Company had mortgage loans held-for-sale with a carrying value and valuation allowance of \$47 and \$3, respectively, and \$47 and \$3, respectively, as of December 31, 2012.

Other	741	743	A+	688	752	AA-
Total Revenue	9,222	9,388	AA-	9,425	10,390	AA-
Total Municipal	\$12,235	\$12,543	AA-	\$13,001	\$14,361	AA-

[1] Pre-refunded bonds are bonds for which an irrevocable trust containing sufficient U.S. treasury, agency, or other securities has been established to fund the remaining payment of principal and interest.

Leasing revenue bonds are generally the obligations of a financing authority established by the municipality that leases municipal facilities to a municipality. The notes are typically secured by lease payments made by the

[2] municipality that is leasing the facilities financed by the issue. Lease payments may be subject to annual appropriation by the municipality or the municipality may be obligated to appropriate general tax revenues to make lease payments.

As of September 30, 2013 and December 31, 2012, the largest issuer concentrations were the states of California, Illinois and Massachusetts, which each comprised less than 3% of the municipal bond portfolio.

Limited Partnerships and Other Alternative Investments

The following table presents the Company's investments in limited partnerships and other alternative investments which include hedge funds, mortgage and real estate funds, mezzanine debt funds, and private equity and other funds. Hedge funds include investments in funds of funds and direct funds. These hedge funds invest in a variety of strategies including global macro and long/short credit and equity. Mortgage and real estate funds consist of investments in funds whose assets consist of mortgage loans, mortgage loan participations, mezzanine loans or other notes which may be below investment grade, as well as equity real estate and real estate joint ventures. Mezzanine debt funds include investments in funds whose assets consist of subordinated debt that often incorporates equity-based options such as warrants and a limited amount of direct equity investments. Private equity and other funds primarily consist of investments in funds whose assets typically consist of a diversified pool of investments in small to mid-sized non-public businesses with high growth potential.

	September 30, 2013		December 31, 2012		
	Amount	Percent	Amount	Percent	%
Hedge funds	\$1,375	45.0	% \$1,309	43.4	%
Mortgage and real estate funds	525	17.2	% 501	16.6	%
Mezzanine debt funds	93	3.0	% 108	3.6	%
Private equity and other funds	1,066	34.8	% 1,097	36.4	%
Total	\$3,059	100	% \$3,015	100	%

Since December 31, 2012, the increase in hedge funds largely relates to the reinvestment of proceeds due to sales of underlying funds.

Table of Contents

Available-for-Sale Securities — Unrealized Loss Aging

The total gross unrealized losses were \$1.3 billion as of September 30, 2013, and have increased \$271, or 26%, from December 31, 2012 primarily due to an increase in interest rates.

As of September 30, 2013, \$1.0 billion of the gross unrealized losses were associated with securities depressed less than 20% of cost or amortized cost.

The remaining \$332 of gross unrealized losses were associated with securities depressed greater than 20%, which includes \$11 associated with securities depressed over 50% for twelve months or more. The securities depressed more than 20% are primarily foreign government securities, floating rate corporate financial securities, securities with exposure to commercial and residential real estate, U.S. treasuries, as well as ABS backed by small business and student loans that have market spreads that continue to be wider than the spreads at the securities' respective purchase dates. The unrealized losses remain largely due to the continued market and economic uncertainties surrounding financial services, residential and certain commercial real estate and ABS student loans. Based upon the Company's cash flow modeling and current market and collateral performance assumptions, these securities have sufficient credit protection levels to receive contractually obligated principal and interest payments. Also included in the gross unrealized losses depressed greater than 20% are financial services securities that have a floating-rate coupon and/or long-dated maturities.

As part of the Company's ongoing security monitoring process, the Company has reviewed its AFS securities in an unrealized loss position and concluded that there were no additional impairments as of September 30, 2013 and that these securities are temporarily depressed and are expected to recover in value as the securities approach maturity or as market spreads continue to improve. For these securities in an unrealized loss position where a credit impairment has not been recorded, the Company's best estimate of expected future cash flows are sufficient to recover the amortized cost basis of the security. Furthermore, the Company neither has an intention to sell nor does it expect to be required to sell these securities. For further information regarding the Company's impairment analysis, see Other-Than-Temporary Impairments in the Investment Portfolio Risks and Risk Management section of this MD&A. The following table presents the Company's unrealized loss aging for AFS securities by length of time the security was in a continuous unrealized loss position.

Consecutive Months	September 30, 2013				December 31, 2012			
	Items	Cost or Amortized Cost	Fair Value	Unrealized Loss [1]	Items	Cost or Amortized Cost	Fair Value	Unrealized Loss [1]

Other-Than-Temporary Impairments

The following table presents the Company's impairments recognized in earnings by security type.

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2013	2012	2013	2012
ABS	\$—	\$—	\$4	\$25
CRE CDOs	—	7	2	10
CMBS				
Bonds	8	19	17	24
IOs	1	1	2	1
Corporate	5	4	15	28
Equity	7	4	13	65
RMBS sub-prime	5	2	6	10
Other	—	—	—	1
Total	\$26	\$37	\$59	\$164

Three and nine months ended September 30, 2013

For the three and nine months ended September 30, 2013, impairments recognized in earnings were comprised of securities the Company intends to sell of \$16 and \$21, respectively, impairments on equity securities of \$7 and \$13, respectively, and credit impairments of \$3 and \$25, respectively.

For the three months ended September 30, 2013, credit impairments were primarily concentrated in private placement and CMBS interest only securities. For the nine months ended September 30, 2013, credit impairments were primarily concentrated in corporate and fixed-rate CMBS bonds and equity securities. The corporate bonds were impaired due to two issuers that have experienced financial difficulty and either defaulted on a payment of interest or it is more-likely-than-not that the issuer will not be able to repay a portion of the principal and interest that are owed to the Company. The structured securities were impaired primarily due to actual performance or property-specific deterioration of the underlying collateral. The Company calculated these impairments utilizing both a top down modeling approach and a security-specific collateral review. The top down modeling approach used discounted cash flow models that considered losses under current and expected future economic conditions. Assumptions used over the current period included macroeconomic factors, such as an elevated unemployment rate, as well as sector specific factors such as property values, delinquency levels, servicer behavior and severity rates. The macroeconomic assumptions considered by the Company did not materially change for the three and nine months ended September 30, 2013, and, as such, the credit impairments recognized were primarily driven by actual collateral deterioration, largely

as a result of the Company's security-specific collateral review.

The security-specific collateral review is performed to estimate potential future losses. This review incorporates assumptions about expected future collateral cash flows, including projected default rates and severities. The results of the security-specific collateral review allowed the Company to estimate the expected timing of a security's first loss, if any, and the probability and severity of potential ultimate losses. The Company then discounted these anticipated future cash flows at the security's book yield prior to impairment.

For the nine months ended September 30, 2013, impairments on equity securities were comprised of three securities that have been in an unrealized loss position and the Company no longer believes that the securities will recover within the foreseeable future. Intent-to-sell impairments were primarily related to structured securities with exposure to commercial and residential real estate and corporate securities, as a result of the Company's desire to reduce exposure to certain higher risk securities that are currently trading at relatively attractive valuations.

Table of Contents

In addition to the credit impairments recognized in earnings, the Company recognized non-credit impairments in other comprehensive income of \$(2) and \$(19), for the three and nine months ended September 30, 2013, respectively, predominantly concentrated in corporate financial services and RMBS. These non-credit impairments represent the difference between fair value and the Company's best estimate of expected future cash flows discounted at the security's effective yield prior to impairment, rather than at current market implied credit spreads. These non-credit impairments primarily represent increases in market liquidity premiums and credit spread widening that occurred after the securities were purchased, as well as a discount for variable-rate coupons which are paying less than at purchase date. In general, larger liquidity premiums and wider credit spreads are the result of deterioration of the underlying collateral performance of the securities.

Future impairments may develop as the result of changes in intent to sell of specific securities or if actual results underperform current modeling assumptions, which may be the result of, but are not limited to, macroeconomic factors and security-specific performance below current expectations. Ultimate loss formation will be a function of macroeconomic factors and idiosyncratic security-specific performance.

Three and nine months ended September 30, 2012

Impairments recognized in earnings were comprised of credit impairments of \$14 and \$40, respectively, impairments on equity securities of \$4 and \$63, respectively, and securities that the Company intends to sell of \$19 and \$61. Credit impairments primarily related to structured securities associated with residential and commercial real estate, as well as ABS small business. Impairments on equity securities comprised of below investment grade preferred stock that were depressed greater than 20% for more than six months. Impairments on securities for which the Company has the intent-to-sell primarily related to European corporate debt where the Company would like the ability to reduce certain exposures, as well as high risk CMBS bonds and ABS collateralized by student loans.

Table of Contents

CAPITAL RESOURCES AND LIQUIDITY

The following section discusses the overall financial strength of The Hartford and its insurance operations including their ability to generate cash flows from each of their business segments, borrow funds at competitive rates and raise new capital to meet operating and growth needs over the next twelve months.

Liquidity Requirements and Sources of Capital

The Hartford Financial Services Group, Inc. (Holding Company)

The liquidity requirements of the holding company of The Hartford Financial Services Group, Inc. ("HFSG Holding Company") have been and will continue to be met by HFSG Holding Company's fixed maturities, short-term investments and cash, dividends from its insurance operations, as well as the issuance of common stock, debt or other capital securities and borrowings from its credit facilities, as needed.

As of September 30, 2013, HFSG Holding Company held fixed maturities, short-term investments and cash of \$1.8 billion. On February 22, 2013, following extraordinary dividend approval from the State of Connecticut Insurance Department, \$1.2 billion was distributed to the HFSG Holding Company from its Connecticut domiciled life insurance subsidiaries. In addition, the Company's Vermont life reinsurance captive returned approximately \$340 of capital to the HFSG Holding Company.

The Hartford has an intercompany liquidity agreement that allows for short-term advances of funds among the HFSG Holding Company and certain affiliates of up to \$2.0 billion for liquidity and other general corporate purposes. The Connecticut Insurance Department granted approval for certain affiliated insurance companies that are parties to the agreement to treat receivables from a parent, including the HFSG Holding Company, as admitted assets for statutory accounting purposes. On April 29, 2013 Hartford Life Insurance Company, a subsidiary of the Company, issued a Revolving Note (the "Note") in the principal amount of \$100 to Hartford Life and Accident Insurance Company, a subsidiary of the Company, under the intercompany liquidity agreement. The Note bears interest at 0.92% and matures on April 29, 2014. On May 29, 2013 Hartford Life and Annuity Insurance Company, a subsidiary of the Company, issued a Note in the principal amount of \$225 to Hartford Life and Accident Insurance Company, under the intercompany liquidity agreement. The Note bears interest at 1.00% and matures on May 29, 2014.

Hartford Life and Annuity Insurance Company ("HLAI"), an indirect wholly-owned subsidiary of the Company, cedes certain variable annuity contracts and their associated riders as well as certain payout annuities issued by HLAI or assumed by it to White River Life Reinsurance Company ("WRR"), an affiliate captive reinsurer. This arrangement provides the Company with a vehicle to provide more efficient financing of the risk associated with this business with internal funds. The reinsurance arrangement between HLAI and WRR does not impact the Company's reserving methodology or the amount of required regulatory capital associated with the reinsured business. The effects of this intercompany arrangement are eliminated in consolidation.

Pursuant to an intercompany note agreement between WRR and HFSG Holding Company, WRR may borrow up to \$1 billion from the HFSG Holding Company in order to maintain certain statutory capital levels required by its plan of operations and which can be used by WRR to settle outstanding intercompany payables with HLAI. WRR has borrowed \$655 under the intercompany note agreement as of September 30, 2013 and December 30, 2012. The effects of this intercompany arrangement are eliminated in consolidation.

On January 31, 2013, the Board of Directors authorized a capital management plan which provides for a \$500 equity repurchase program to be completed by December 31, 2014 and for the reduction of approximately \$1.0 billion of debt including repayment of \$320 of 4.625% senior notes due in July 2013 and \$200 of 4.75% senior notes due in March 2014. In June 2013, the Board of Directors approved a \$750 increase in the Company's 2013-2014 equity repurchase program, bringing the total authorization to \$1.25 billion. On July 15, 2013, the Company repaid the 4.625% senior notes upon maturity. For additional information regarding debt, see Note 16 - Debt of Notes to Condensed Consolidated Financial Statements.

Expected liquidity requirements of the HFSG Holding Company for the next twelve months include interest on debt of approximately \$380 and common stockholder dividends, subject to the discretion of the Board of Directors, of approximately \$260.

Equity

During the nine months ended September 30, 2013, the Company repurchased 12.7 million common shares for \$375, and 1.6 million warrants for \$33 under the equity repurchase program. In addition, the Company repurchased 1.8 million common shares, for \$60, from October 1, 2013 to October 24, 2013.

Debt

On April 15, 2013, the Company issued \$300 aggregate principal amount of 4.3% Senior Notes (the "4.3% Notes") due April 15, 2043. For additional information regarding debt, see Note 16 - Debt of Notes to Condensed Consolidated Financial Statements.

Dividends

On May 16, 2013, The Hartford's Board of Directors declared a quarterly dividend of \$0.10 per common share payable on July 1, 2013 to common shareholders of record as of June 3, 2013.

Table of Contents

On July 24, 2013, The Hartford's Board of Directors declared a quarterly dividend of \$0.15 per common share payable on October 1, 2013 to common shareholders of record as of September 3, 2013.

On October 24, 2013, The Hartford's Board of Directors declared a quarterly dividend of \$0.15 per common share payable on January 2, 2014 to common shareholders of record as of December 2, 2013.

There are no current restrictions on the HFSG Holding Company's ability to pay dividends to its shareholders. For a discussion of restrictions on dividends to the HFSG Holding Company from its insurance subsidiaries, see "Dividends from Insurance Subsidiaries" below. For a discussion of potential restrictions on the HFSG Holding Company's ability to pay dividends, see the risk factor "Our ability to declare and pay dividends is subject to limitations" in Item 1A of Part I of the Company's Annual Report on Form 10-K for the year ended December 31, 2012.

Pension Plans and Other Postretirement Benefits

While the Company has significant discretion in making voluntary contributions to the Plan, the Employee Retirement Income Security Act of 1974, as amended by the Pension Protection Act of 2006, the Worker, Retiree, and Employer Recovery Act of 2008, the Preservation of Access to Care for Medicare Beneficiaries and Pension Relief Act of 2010, the Moving Ahead for Progress in the 21st Century Act of 2012 (MAP-21), and Internal Revenue Code regulations mandate minimum contributions in certain circumstances. The Company does not have a required minimum funding contribution for the U.S. qualified defined benefit pension plan for 2013 and the funding requirements for all of the pension plans is expected to be immaterial. The Company presently anticipates contributing approximately \$100 in 2013 to its pension plans, based upon certain economic and business assumptions. These assumptions include, but are not limited to, equity market performance, changes in interest rates and the Company's other capital requirements.

Dividends from Insurance Subsidiaries

Dividends to the HFSG Holding Company from its insurance subsidiaries are limited by state regulation. The payment of dividends by Connecticut-domiciled insurers, including dividends associated with the proceeds from a sale of any of our life businesses, is limited under the insurance holding company laws of Connecticut. These laws require notice to and approval by the state insurance commissioner for the declaration or payment of any dividend, which, together with other dividends or distributions made within the preceding twelve months, exceeds the greater of (i) 10% of the insurer's policyholder surplus as of December 31 of the preceding year or (ii) net income (or net gain from operations, if such company is a life insurance company) for the twelve-month period ending on the thirty-first day of December last preceding, in each case determined under statutory insurance accounting principles. In addition, if any dividend of a Connecticut-domiciled insurer exceeds the insurer's earned surplus, it requires the prior approval of the Connecticut Insurance Commissioner. The insurance holding company laws of the other jurisdictions in which The Hartford's insurance subsidiaries are incorporated (or deemed commercially domiciled) generally contain similar (although in certain instances somewhat more restrictive) limitations on the payment of dividends. Dividends paid to HFSG Holding Company by its life insurance subsidiaries are further dependent on cash requirements of HLI and other factors. The Company's property-casualty insurance subsidiaries are permitted to pay up to a maximum of approximately \$1.4 billion in dividends to HFSG Holding Company in 2013 without prior approval from the applicable insurance commissioner. The life insurance subsidiaries' dividend limitation under the holding company laws of Connecticut is \$577 in 2013. However, because the life insurance subsidiaries' earned surplus is negative as of December 31, 2012, the life insurance subsidiaries will not be permitted to pay any dividends in 2013 without prior approval from the Connecticut Insurance Commissioner. In addition to statutory limitations on paying dividends, the Company also takes other items into consideration when determining dividends from subsidiaries. These considerations include, but are not limited to expected earnings and capitalization of the subsidiary, regulatory capital requirements and liquidity requirements of the individual operating company. On February 5, 2013 the Company received approval from the State of Connecticut Insurance Department for a \$1.2 billion extraordinary dividend from its Connecticut domiciled life insurance subsidiaries. This dividend was paid on February 22, 2013. For the nine months ended September 30, 2013, HFSG Holding Company received \$711 in dividends from its property-casualty insurance subsidiaries, including dividends of \$112 to fund interest payments on an intercompany note between Hartford Holdings, Inc. and Hartford Fire Insurance Company.

Other Sources of Capital for the HFSG Holding Company

The Hartford endeavors to maintain a capital structure that provides financial and operational flexibility to its insurance subsidiaries, ratings that support its competitive position in the financial services marketplace (see the “Ratings” section below for further discussion), and shareholder returns. As a result, the Company may from time to time raise capital from the issuance of equity, equity-related debt or other capital securities and is continuously evaluating strategic opportunities. The issuance of common equity, equity-related debt or other capital securities could result in the dilution of shareholder interests or reduced net income due to additional interest expense.

130

Table of Contents

Shelf Registrations

On August 9, 2013, The Hartford filed with the Securities and Exchange Commission (the “SEC”) an automatic shelf registration statement (Registration No. 333-190506) for the potential offering and sale of debt and equity securities. The registration statement allows for the following types of securities to be offered: debt securities, junior subordinated debt securities, preferred stock, common stock, depositary shares, warrants, stock purchase contracts, and stock purchase units. In that The Hartford is a well-known seasoned issuer, as defined in Rule 405 under the Securities Act of 1933, the registration statement went effective immediately upon filing and The Hartford may offer and sell an unlimited amount of securities under the registration statement during the three-year life of the registration statement.

Contingent Capital Facility

The Hartford is party to a put option agreement that provides The Hartford with the right to require the Glen Meadow ABC Trust, a Delaware statutory trust, at any time and from time to time, to purchase The Hartford’s junior subordinated notes in a maximum aggregate principal amount not to exceed \$500. Under the Put Option Agreement, The Hartford will pay the Glen Meadow ABC Trust premiums on a periodic basis, calculated with respect to the aggregate principal amount of Notes that The Hartford had the right to put to the Glen Meadow ABC Trust for such period. The Hartford has agreed to reimburse the Glen Meadow ABC Trust for certain fees and ordinary expenses. The Company holds a variable interest in the Glen Meadow ABC Trust where the Company is not the primary beneficiary. As a result, the Company did not consolidate the Glen Meadow ABC Trust. As of September 30, 2013, The Hartford has not exercised its right to require Glen Meadow ABC Trust to purchase the Notes. As a result, the Notes remain a source of capital for the HFSG Holding Company.

Commercial Paper and Revolving Credit Facility

Commercial Paper

While The Hartford’s maximum borrowings available under its commercial paper program are \$2.0 billion, the Company is dependent upon market conditions to access short-term financing through the issuance of commercial paper to investors. As of September 30, 2013 there is no commercial paper outstanding.

Revolving Credit Facilities

The Company has a senior unsecured revolving credit facility (the “Credit Facility”) that provides for borrowing capacity up to \$1.75 billion (which is available in U.S. dollars, and in Euro, Sterling, Canadian dollars and Japanese Yen) through January 6, 2016. As of September 30, 2013 there are no borrowings outstanding under the Credit Facility. Of the total availability under the Credit Facility, up to \$250 is available to support letters of credit issued on behalf of the Company or subsidiaries of the Company. Under the Credit Facility, the Company must maintain a minimum level of consolidated net worth of \$14.9 billion. The definition of consolidated net worth under the terms of the Credit Facility, excludes AOCI and includes the Company’s outstanding junior subordinated debentures and perpetual preferred securities, net of discount. In addition, the Company’s maximum ratio of consolidated total debt to consolidated total capitalization is 35%, and the ratio of consolidated total debt of subsidiaries to consolidated total capitalization is limited to 10%. As of September 30, 2013, the Company was in compliance with all financial covenants under the Credit Facility.

The Hartford’s Japan operations also maintain two lines of credit in support of operations. Both lines of credit are in the amount of approximately \$50, or ¥5 billion, and individually have expiration dates of January 4, 2014 and September 30, 2014.

Derivative Commitments

Certain of the Company’s derivative agreements contain provisions that are tied to the financial strength ratings of the individual legal entity that entered into the derivative agreement as set by nationally recognized statistical rating agencies. If the legal entity’s financial strength were to fall below certain ratings, the counterparties to the derivative agreements could demand immediate and ongoing full collateralization and in certain instances demand immediate settlement of all outstanding derivative positions traded under each impacted bilateral agreement. The settlement amount is determined by netting the derivative positions transacted under each agreement. If the termination rights were to be exercised by the counterparties, it could impact the legal entity’s ability to conduct hedging activities by increasing the associated costs and decreasing the willingness of counterparties to transact with the legal entity. The

aggregate fair value of all derivative instruments with credit-risk-related contingent features that are in a net liability position as of September 30, 2013 is \$1.1 billion. Of this \$1.1 billion, the legal entities have posted collateral of \$1.3 billion in the normal course of business. In addition, the Company has posted collateral of \$44 associated with a customized GMWB derivative. Based on derivative market values as of September 30, 2013 a downgrade of one level below the current financial strength ratings by either Moody's or S&P could require approximately an additional \$6 to be posted as collateral. Based on derivative market values as of September 30, 2013 a downgrade by either Moody's or S&P of two levels below the legal entities' current financial strength ratings could require approximately an additional \$27 of assets to be posted as collateral. These collateral amounts could change as derivative market values change, as a result of changes in our hedging activities or to the extent changes in contractual terms are negotiated. The nature of the collateral that we would post, if required, would be primarily in the form of U.S. Treasury bills, U.S. Treasury notes and government agencies.

Table of Contents

As of September 30, 2013 the aggregate notional amount and fair value of derivative relationships that could be subject to immediate termination in the event of rating agency downgrades to either BBB+ or Baa1 was \$656 and \$(15), respectively. In addition, the Company holds notional and fair value amounts of \$3.8 billion, and \$69, respectively, of a customized GMWB derivative which contains an early termination trigger.

On June 17, 2013 S&P lowered its counterparty credit and insurer financial strength ratings on Hartford Life Insurance Company to BBB+. Given this downgrade action, termination rating triggers of one derivative counterparty relationship were impacted. This counterparty has the right to terminate this relationship and would have to settle the outstanding derivatives prior to exercising its termination right. The Company is in the process of re-negotiating the rating trigger which it expects to successfully complete. Accordingly, the Company's hedging programs have not been adversely impacted by the announcement of the downgrade of Hartford Life Insurance Company. As of September 30, 2013 the notional amount and fair value related to this counterparty is \$1.3 billion and \$(6), respectively.

Insurance Operations

Current and expected patterns of claim frequency and severity or surrenders may change from period to period but continue to be within historical norms and, therefore, the Company's insurance operations' current liquidity position is considered to be sufficient to meet anticipated demands over the next twelve months, including any obligations related to the Company's restructuring activities. For a discussion and tabular presentation of the Company's current contractual obligations by period, refer to Off-Balance Sheet Arrangements and Aggregate Contractual Obligations within the Capital Resources and Liquidity section of the MD&A included in The Hartford's 2012 Form 10-K Annual Report.

The principal sources of operating funds are premiums, fees earned from assets under management and investment income, while investing cash flows originate from maturities and sales of invested assets. The primary uses of funds are to pay claims, claim adjustment expenses, commissions and other underwriting expenses, to purchase new investments and to make dividend payments to the HFSG Holding Company.

The Company's insurance operations consist of property and casualty insurance products (collectively referred to as "Property & Casualty Operations") and life insurance and legacy annuity products (collectively referred to as "Life Operations").

Property & Casualty Operations

Property & Casualty Operations holds fixed maturity securities including a significant short-term investment position (securities with maturities of one year or less at the time of purchase) to meet liquidity needs.

As of September 30, 2013 Property & Casualty Operations' fixed maturities, short-term investments, and cash are summarized as follows:

Fixed maturities	\$24,905
Short-term investments	801
Cash	175
Less: Derivative collateral	230
Total	\$25,651

Liquidity requirements that are unable to be funded by Property & Casualty Operation's short-term investments would be satisfied with current operating funds, including premiums received or through the sale of invested assets. A sale of invested assets could result in significant realized losses.

Life Operations

Life Operations' total general account contractholder obligations are supported by \$52 billion of cash and total general account invested assets, excluding equity securities, trading, which includes a significant short-term investment position to meet liquidity needs.

As of September 30, 2013 Life Operations' fixed maturities, short-term investments, and cash are summarized as follows:

Fixed maturities	\$39,013
Short-term investments	2,624
Cash	1,270
Less: Derivative collateral	1,325

Less: Cash associated with Japan variable annuities	431
Total	\$41,151

Table of Contents

Capital resources available to fund liquidity, upon contractholder surrender, are a function of the legal entity in which the liquidity requirement resides. Generally, obligations of Group Benefits will be funded by Hartford Life and Accident Insurance Company. Obligations of Talcott Resolution will generally be funded by Hartford Life Insurance Company and Hartford Life and Annuity Insurance Company, while obligations of the Company's international annuity subsidiaries will generally be funded by the legal entity in the country in which the obligation was generated. Contractholder obligations of the former Retirement Plans business were funded by Hartford Life Insurance Company and of the former Individual Life business were funded by both Hartford Life Insurance Company and Hartford Life and Annuity Insurance Company. See Note 2 - Business Dispositions of Notes to the Condensed Consolidated Financial Statements as to the sale of the Retirement Plans and Individual Life businesses and related transfer of invested assets in January 2013.

Hartford Life Insurance Company ("HLIC"), an indirect wholly-owned subsidiary, is a member of the Federal Home Loan Bank of Boston ("FHLBB"). Membership allows HLIC access to collateralized advances, which may be used to support various spread-based businesses or to enhance liquidity management. The Connecticut Department of Insurance ("CTDOI") will permit HLIC to pledge up to \$1.25 billion in qualifying assets to secure FHLBB advances for 2013. The amount of advances that can be taken are dependent on the asset types pledged to secure the advances. The pledge limit is recalculated annually based on statutory admitted assets and capital and surplus. HLIC would need to seek the prior approval of the CTDOI if there were a desire to exceed these limits. As of September 30, 2013, HLIC had no advances outstanding under the FHLBB facility.

	September 30, 2013
Contractholder Obligations	
Total Life contractholder obligations	\$223,993
Less: Separate account assets [1]	139,876
International statutory separate accounts [1]	24,064
General account contractholder obligations	\$60,052
Composition of General Account Contractholder Obligations	
Contracts without a surrender provision and/or fixed payout dates [2]	\$27,891
U.S. Fixed MVA annuities and Other [3]	10,455
International Fixed MVA annuities	1,654
Guaranteed investment contracts ("GIC") [4]	76
Other [5]	19,975
General account contractholder obligations	\$60,052

In the event customers elect to surrender separate account assets or international statutory separate accounts, Life Operations will use the proceeds from the sale of the assets to fund the surrender, and Life Operations' liquidity position will not be impacted. In many instances Life Operations will receive a percentage of the surrender amount as compensation for early surrender (surrender charge), increasing Life Operations' liquidity position. In addition, a surrender of variable annuity separate account or general account assets (see below) will decrease Life Operations' obligation for payments on guaranteed living and death benefits.

[1] Relates to contracts such as payout annuities or institutional notes, other than guaranteed investment products with an MVA feature (discussed below) or surrenders of term life, group benefit contracts or death and living benefit reserves for which surrenders will have no current effect on Life Operations' liquidity requirements.

[2] Relates to contracts such as payout annuities or institutional notes, other than guaranteed investment products with an MVA feature (discussed below) or surrenders of term life, group benefit contracts or death and living benefit reserves for which surrenders will have no current effect on Life Operations' liquidity requirements.

[3] Relates to annuities that are recorded in the general account (under U.S. GAAP), although these annuities are held in a statutory separate account, as the contractholders are subject to the Company's credit risk. In the statutory separate account, Life Operations is required to maintain invested assets with a fair value equal to the MVA surrender value of the Fixed MVA contract. In the event assets decline in value at a greater rate than the MVA surrender value of the Fixed MVA contract, Life Operations is required to contribute additional capital to the statutory separate account. Life Operations will fund these required contributions with operating cash flows or short-term investments. In the event that operating cash flows or short-term investments are not sufficient to fund required contributions, the Company may have to sell other invested assets at a loss, potentially resulting in a decrease in statutory surplus. As the fair value of invested assets in the statutory separate account are generally

equal to the MVA surrender value of the Fixed MVA contract, surrender of Fixed MVA annuities will have an insignificant impact on the liquidity requirements of Life Operations.

GICs are subject to discontinuance provisions which allow the policyholders to terminate their contracts prior to scheduled maturity at the lesser of the book value or market value. Generally, the market value adjustment reflects [4] changes in interest rates and credit spreads. As a result, the market value adjustment feature in the GIC serves to protect the Company from interest rate risks and limit Life Operations' liquidity requirements in the event of a surrender.

Surrenders of, or policy loans taken from, as applicable, these general account liabilities, which include the general account option for Talcott Resolution's individual variable annuities and the variable life contracts of the former Individual Life business, the general account option for annuities of the former Retirement Plans business and universal life contracts sold by the former Individual Life business, may be funded through operating cash flows of Life Operations, available short-term investments, or Life Operations may be required to sell fixed maturity [5] investments to fund the surrender payment. Sales of fixed maturity investments could result in the recognition of realized losses and insufficient proceeds to fully fund the surrender amount. In this circumstance, Life Operations may need to take other actions, including enforcing certain contract provisions which could restrict surrenders and/or slow or defer payouts. See Note 2 - Business Dispositions of Notes to Consolidated Financial Statements as to the sale of the Retirement Plans and Individual Life businesses and related transfer of invested assets in January 2013.

Table of Contents

Off-Balance Sheet Arrangements and Aggregate Contractual Obligations

Off-Balance Sheet Arrangements

There have been no material changes to the Company's off-balance sheet arrangements since the filing of the Company's 2012 Form 10-K Annual Report.

Aggregate Contractual Obligations

Since December 31, 2012, the Company issued \$300 aggregate principal amount of 4.3% Senior Notes (the "4.3% Notes") due April 15, 2043. For additional information, see MD&A – Liquidity Requirements and Sources of Capital – Debt and Note 16 - Debt of Notes to Condensed Consolidated Financial Statements.

Capitalization

The capital structure of The Hartford as of September 30, 2013 and December 31, 2012 consisted of debt and stockholders' equity, summarized as follows:

	September 30, 2013	December 31, 2012	Change	
Short-term debt (includes current maturities of long-term debt)	\$200	\$320	(38))%
Long-term debt	6,106	6,806	(10))%
Total debt [1]	6,306	7,126	(12))%
Stockholders' equity excluding accumulated other comprehensive income (loss), net of tax ("AOCI")	18,945	19,604	(3))%
AOCI, net of tax	(17) 2,843	(101))%
Total stockholders' equity	\$18,928	\$22,447	(16))%
Total capitalization including AOCI	\$25,234	\$29,573	(15))%
Debt to stockholders' equity	33	%32	%	
Debt to capitalization	25	%24	%	

[1] Total debt of the Company excludes \$83 and \$161 of consumer notes as of September 30, 2013 and December 31, 2012, respectively.

The Hartford's total capitalization decreased \$4.3 billion, or 15%, from December 31, 2012 to September 30, 2013 primarily due to decreases in total debt, as well as the impact of the sales of the Retirement Plans and Individual Life businesses ("business dispositions").

Total debt decreased as a result of the Company's repurchase of principal amounts of approximately \$800, plus a payment for unpaid interest on senior notes due through the settlement date, issuance of \$300 of senior notes offset by repayment of \$320 of senior notes.

AOCI, net of tax, declined from December 31, 2012 to September 30, 2013 primarily due to reclassification of realized capital gains associated with the business dispositions to retained earnings within stockholders' equity, excluding AOCI. The realized capital gains are offset within retained earnings by the reinsurance loss on the business dispositions.

For additional information on debt, see MD&A – Liquidity Requirements and Sources of Capital and Note 16 - Debt of Notes to Condensed Consolidated Financial Statements. For additional information on the business dispositions and AOCI, net of tax, see Note 2 - Business Dispositions and Note 19 - Changes In and Reclassifications From Accumulated Other Comprehensive Income of Notes to Condensed Consolidated Financial Statements, respectively.

Table of Contents

Cash Flows

	Nine Months Ended September 30,	
	2013	2012
Net cash provided by operating activities	\$903	\$2,212
Net cash provided by (used for) investing activities	\$1,688	\$(1,862)
Net cash used for financing activities	\$(3,454)	\$(217)
Cash – end of period	\$1,422	\$2,705

Cash provided by operating activities decreased primarily due to income taxes paid of \$140 in 2013, compared to income taxes received of \$448 in 2012, as well as lower fee income and lower net investment income on available-for-sale securities, excluding limited partnerships and other investments.

Cash provided by investing activities in 2013 primarily relates to net proceeds from available for sale securities of \$3.1 billion, proceeds from businesses sold of \$485, partially offset by net purchases of derivatives of \$1.7 billion and net payments of mortgage loans of \$226. Cash used for investing activities in 2012 primarily relates to net purchases of derivatives of \$1.6 billion, net purchases of mortgage loans of \$1.1 billion, and net purchases of partnerships of \$604, primarily offset by net proceeds of available for sale securities of \$1.5 billion.

Cash used for financing activities in 2013 consists primarily of \$751 related to net activity for investments and universal life products, net decreases in securities loaned or sold of \$1 billion, repayment of debt of \$1.3 billion and acquisition of treasury stock of \$375 offset by proceeds from issuance of debt of \$295. Cash used for financing activities in 2012 consists primarily of net outflows on investment and universal life-type contracts of \$1.0 billion, repurchase of warrants of \$300, as well as share repurchases and dividends paid on common and preferred stock. These were partially offset by net increases in securities loaned or sold of \$1.6 billion.

Operating cash flows for the nine months ended September 30, 2013 and 2012 have been adequate to meet liquidity requirements.

Equity Markets

For a discussion of the potential impact of the equity markets on capital and liquidity, see the Enterprise Risk Management section of the MD&A.

Ratings

Ratings impact the Company's cost of borrowing and its ability to access financing and are an important factor in establishing competitive position in the insurance and financial services marketplace. There can be no assurance that the Company's ratings will continue for any given period of time or that they will not be changed. In the event the Company's ratings are downgraded, the Company's cost of borrowing and ability to access financing, as well as the level of revenues or the persistency of its business may be adversely impacted.

On June 17, 2013, Standard & Poor's ("S&P") affirmed the issuer credit ratings of BBB for The Hartford Financial Services Group, Inc. and the financial strength ratings of A- for Hartford Life and Accident Insurance Company, BBB+ for Hartford Life and Annuity Insurance Company, and A for Hartford Fire Insurance Company. S&P downgraded the financial strength rating for Hartford Life Insurance Company to BBB+ from A-. The outlook is stable for Hartford Life Insurance Company and Hartford Life and Annuity. The ratings are on positive outlook for The Hartford Financial Services Group, Inc., Hartford Fire Insurance Company and Hartford Life and Accident. The following table summarizes The Hartford's significant member companies' financial strength ratings from the major independent rating organizations as of October 23, 2013.

Insurance Financial Strength Ratings:	A.M. Best	Fitch	Standard & Poor's	Moody's
Hartford Fire Insurance Company	A	A+	A	A2
Hartford Life Insurance Company	A-	A-	BBB+	A3
Hartford Life and Accident Insurance Company	A-	A-	A-	A3
Hartford Life and Annuity Insurance Company	A-	A-	BBB+	Baa2

Other Ratings:

The Hartford Financial Services Group, Inc.:

Senior debt	bbb+	BBB	BBB	Baa3
Commercial paper	AMB-2	F2	A-2	P-3

These ratings are not a recommendation to buy or hold any of The Hartford's securities and they may be revised or revoked at any time at the sole discretion of the rating organization.

135

Table of Contents

The agencies consider many factors in determining the final rating of an insurance company. One consideration is the relative level of statutory surplus necessary to support the business written. Statutory surplus represents the capital of the insurance company reported in accordance with accounting practices prescribed by the applicable state insurance department.

Statutory Capital and Surplus

The table below sets forth statutory capital and surplus for the Company's insurance companies.

	September 30, 2013	December 31, 2012
U.S. life insurance subsidiaries, includes domestic captive insurance subsidiaries	\$6,885	\$6,410
Property and casualty insurance subsidiaries	7,782	7,645
Total	\$14,667	\$14,055

Total statutory capital and surplus for the U.S. life insurance subsidiaries, including domestic captive insurance subsidiaries, increased by \$475, primarily due to net income from non-variable annuity business of \$1.8 billion including statutory gains from the sales of the Retirement Plans and Individual Life businesses, change in affiliated subsidiaries carrying values of \$402, net deferred gain on inforce reinsurance of \$194, other surplus changes of \$116, partially offset by letter of credit decreases of \$269, variable annuity surplus impacts of approximately \$268, and net returns of capital of \$1.5 billion.

Total statutory capital and surplus for property and casualty increased by \$137, primarily due to net income of \$750, capital contributions of \$72, and unrealized gains of \$8, partially offset by an increase of statutory nonadmitted assets of \$2, a reduction of deferred tax assets of \$92, and dividends to HFSG Holding Company of \$599. Both net income and dividends are net of interest payments and dividends, respectively, on an intercompany note between Hartford Holdings, Inc. and Hartford Fire Insurance Company.

The Company also holds regulatory capital and surplus for its operations in Japan. Under the accounting practices and procedures governed by Japanese regulatory authorities, the Company's statutory capital and surplus was \$1.2 billion as of September 30, 2013 and December 31, 2012.

Contingencies

Legal Proceedings – For a discussion regarding contingencies related to The Hartford's legal proceedings, please see the information contained under "Litigation" in Note 11 of the Notes to Condensed Consolidated Financial Statements and Part II, Item 1 Legal Proceedings, which are incorporated herein by reference.

Legislative Developments

The Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the "Dodd-Frank Act") was enacted on July 21, 2010, mandating changes to the regulation of the financial services industry. Implementation of the Dodd-Frank Act is ongoing and may affect our operations and governance in ways that could adversely affect our financial condition and results of operations.

Certain provisions of the Dodd-Frank Act that took effect in June 2013 require central clearing of, and/or impose new margin and capital requirements on, derivatives transactions, resulting in increased costs to our hedging program. Other provisions of the Dodd-Frank Act could subject us to post-event assessments imposed by the Federal Deposit Insurance Corporation ("FDIC") to recoup the costs associated with the orderly liquidation of other systemically important institutions in the event one or more such institutions fails. Further, in certain circumstances, the FDIC is authorized to petition a state court to commence an insolvency proceeding to liquidate an insurance company that fails in the event the insurer's state regulator fails to act.

Other provisions in the Dodd-Frank Act that may impact us include: a new "Federal Insurance Office" within Treasury; discretionary authority for the SEC to impose a harmonized standard of care for investment advisers and broker-dealers who provide personalized advice about securities to retail customers; possible adverse impact on the pricing and liquidity of the securities in which we invest resulting from the proprietary trading and market making limitation of the Volcker Rule; possible prohibition of certain asset-backed securities transactions that could adversely impact our ability to offer insurance-linked securities; and enhancements to corporate governance, especially regarding risk management.

The Dodd-Frank Act vests a newly created Financial Stability Oversight Council ("FSOC") with the power to designate "systemically important" financial institutions, which will be subject to special regulatory supervision and other provisions intended to prevent, or mitigate the impact of, future disruptions in the U.S. financial system. Systemically important institutions are limited to large bank holding companies and nonbank financial companies that are so important that their potential failure could "pose a threat to the financial stability of the United States." The FSOC finalized its rule for designating systemically important nonbank financial institutions in April 2012 and made its first designation in July 2013. Based on its most current financial data, The Hartford is below the initial quantitative thresholds that will be used to determine which nonbank companies merit consideration. The FSOC has indicated it will review on a quarterly basis whether non-bank financial institutions meet the metrics for further review.

Table of Contents

If we are designated as a systemically important institution, The Hartford could be subject to higher capital requirements and additional regulatory oversight imposed by The Federal Reserve. In addition, the Dodd-Frank Act may restrict us from sponsoring and investing in private equity and hedge funds, which would limit our discretion in managing our general account.

Fiscal Year 2014, Budget of the United States Government

On April 10, 2013, the Obama Administration released its “Fiscal Year 2014, Budget of the U.S. Government” (the “Budget”). Although the Administration has not released proposed statutory language, the Budget includes proposals that if enacted, would affect the taxation of life insurance companies and certain life insurance products. In particular, the proposals would change the method used to determine the amount of dividend income received by a life insurance company on assets held in separate accounts used to support products, including variable life insurance and variable annuity contracts, which are eligible for the dividends received deduction (“DRD”). The DRD reduces the amount of dividend income subject to tax and is a significant component of the difference between the Company's actual tax expense and expected amount determined using the federal statutory tax rate of 35%. If this proposal were enacted, the Company's actual tax expense could increase, reducing earnings.

IMPACT OF NEW ACCOUNTING STANDARDS

For a discussion of accounting standards, see Note 1 - Basis of Presentation and Accounting Policies of Notes to Consolidated Financial Statements included in The Hartford's 2012 Form 10-K Annual Report and Note 1 - Basis of Presentation and Accounting Policies of Notes to Condensed Consolidated Financial Statements in this Form 10-Q.

Item 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The information contained in the Financial Risk Management section of Management's Discussion and Analysis of Financial Condition and Results of Operations is incorporated herein by reference.

Item 4. CONTROLS AND PROCEDURES

Evaluation of disclosure controls and procedures

The Company's principal executive officer and its principal financial officer, based on their evaluation of the Company's disclosure controls and procedures (as defined in Exchange Act Rule 13a-15(e)) have concluded that the Company's disclosure controls and procedures are effective for the purposes set forth in the definition thereof in Exchange Act Rule 13a-15(e) as of September 30, 2013.

Changes in internal control over financial reporting

There was no change in the Company's internal control over financial reporting that occurred during the Company's current fiscal quarter that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting.

Table of Contents

Part II. OTHER INFORMATION

Item 1. LEGAL PROCEEDINGS

Litigation

The Hartford is involved in claims litigation arising in the ordinary course of business, both as a liability insurer defending or providing indemnity for third-party claims brought against insureds and as an insurer defending coverage claims brought against it. The Hartford accounts for such activity through the establishment of unpaid loss and loss adjustment expense reserves. Subject to the uncertainties discussed below under the caption “Asbestos and Environmental Claims,” management expects that the ultimate liability, if any, with respect to such ordinary-course claims litigation, after consideration of provisions made for potential losses and costs of defense, will not be material to the consolidated financial condition, results of operations or cash flows of The Hartford.

The Hartford is also involved in other kinds of legal actions, some of which assert claims for substantial amounts. These actions include, among others, and in addition to the matters described below, putative state and federal class actions seeking certification of a state or national class. Such putative class actions have alleged, for example, underpayment of claims or improper underwriting practices in connection with various kinds of insurance policies, such as personal and commercial automobile, property, disability, life and inland marine. The Hartford also is involved in individual actions in which punitive damages are sought, such as claims alleging bad faith in the handling of insurance claims or other allegedly unfair or improper business practices. Like many other insurers, The Hartford also has been joined in actions by asbestos plaintiffs asserting, among other things, that insurers had a duty to protect the public from the dangers of asbestos and that insurers committed unfair trade practices by asserting defenses on behalf of their policyholders in the underlying asbestos cases. Management expects that the ultimate liability, if any, with respect to such lawsuits, after consideration of provisions made for estimated losses, will not be material to the consolidated financial condition of The Hartford. Nonetheless, given the large or indeterminate amounts sought in certain of these actions, and the inherent unpredictability of litigation, the outcome in certain matters could, from time to time, have a material adverse effect on the Company’s results of operations or cash flows in particular quarterly or annual periods.

Apart from the inherent difficulty of predicting litigation outcomes, the Mutual Funds Litigation identified below purports to seek substantial damages for unsubstantiated conduct spanning a multi-year period based on novel applications of complex legal theories. The alleged damages are not quantified or factually supported in the complaint, and, in any event, the Company’s experience shows that demands for damages often bear little relation to a reasonable estimate of potential loss. The matter is in the earliest stages of litigation, with no substantive legal decisions by the court defining the scope of the claims or the potentially available damages; fact discovery is also in its early stages. Accordingly, management cannot reasonably estimate the possible loss or range of loss, if any, or predict the timing of the eventual resolution of this matter.

Mutual Funds Litigation — In February 2011, a derivative action was brought on behalf of six Hartford retail mutual funds in the United States District Court for the District of New Jersey, alleging that Hartford Investment Financial Services, LLC (“HIFSCO”), an indirect subsidiary of the Company, received excessive advisory and distribution fees in violation of its statutory fiduciary duty under Section 36(b) of the Investment Company Act of 1940. HIFSCO moved to dismiss and, in September 2011, the motion was granted in part and denied in part, with leave to amend the complaint. In November 2011, plaintiffs filed an amended complaint on behalf of The Hartford Global Health Fund, The Hartford Conservative Allocation Fund, The Hartford Growth Opportunities Fund, The Hartford Inflation Plus Fund, The Hartford Advisors Fund, and The Hartford Capital Appreciation Fund. Plaintiffs seek to rescind the investment management agreements and distribution plans between HIFSCO and these funds and to recover the total fees charged thereunder or, in the alternative, to recover any improper compensation HIFSCO received, in addition to lost earnings. HIFSCO filed a partial motion to dismiss the amended complaint and, in December 2012, the court dismissed without prejudice the claims regarding distribution fees and denied the motion with respect to the advisory fees claims. HIFSCO disputes the allegations and intends to defend vigorously.

Asbestos and Environmental Claims – As discussed in Item 2, Management’s Discussion and Analysis of Financial Condition and Results of Operations - Critical Accounting Estimates - Property and Casualty Insurance Product Reserves, Net of Reinsurance - Property & Casualty Other Operations Claims, The Hartford continues to receive

asbestos and environmental claims that involve significant uncertainty regarding policy coverage issues. Regarding these claims, The Hartford continually reviews its overall reserve levels and reinsurance coverages, as well as the methodologies it uses to estimate its exposures. Because of the significant uncertainties that limit the ability of insurers and reinsurers to estimate the ultimate reserves necessary for unpaid losses and related expenses, particularly those related to asbestos, the ultimate liabilities may exceed the currently recorded reserves. Any such additional liability cannot be reasonably estimated now but could be material to The Hartford's consolidated operating results and liquidity.

138

Table of Contents

Item 1A. RISK FACTORS

Investing in The Hartford involves risk. In deciding whether to invest in The Hartford, you should carefully consider the risk factors disclosed in Item 1A of Part I of the Company's Annual Report on Form 10-K for the year ended December 31, 2012 and in Item 1A of Part II of the Company's Quarterly Report on Form 10-Q for the quarter ended March 31, 2013, any of which could have a significant or material adverse effect on the business, financial condition, operating results or liquidity of The Hartford. This information should be considered carefully together with the other information contained in this report and the other reports and materials filed by The Hartford with the SEC.

Item 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS

Purchases of Equity Securities by the Issuer

The following table summarizes the Company's repurchases of its common stock for the three months ended September 30, 2013:

Period	Total Number of Shares Purchased	Average Price Paid Per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Approximate Dollar Value of Shares that May Yet Be Purchased Under the Plans or Programs [1] (in millions)
July 1, 2013 - July 31, 2013	—	\$—	—	\$ 1,084
August 1, 2013 - August 31, 2013	6,559,131	\$30.69	6,296,396	\$ 879
September 1, 2013 - September 30, 2013	1,178,840	\$30.85	1,178,896	\$ 842
Total	7,737,971	\$30.71	7,475,292	N/A

On January 31, 2013 the Company's Board of Directors authorized a \$500 equity repurchase program. In June 2013, the Board of Directors approved a \$750 increase in the Company's authorized equity repurchase program, bringing the total authorization to \$1.25 billion. The Company's repurchase authorization, which expires on December 31, 2014, permits purchases of common stock, as well as warrants or other derivative securities.

[1] Repurchases may be made in the open market, through derivative, accelerated share repurchase and other privately negotiated transactions, and through plans designed to comply with Rule 10b5-1(c) under the Securities Exchange Act of 1934, as amended. The timing of any future repurchases will be dependent upon several factors, including the market price of the Company's securities, the Company's capital position, consideration of the effect of any repurchases on the Company's financial strength or credit ratings, and other corporate considerations. The repurchase program may be modified, extended or terminated by the Board of Directors at any time.
