CALCULATION OF FILING FEE

Transaction Valuation	**Amount of Filing Fee**
Not Applicable*	Not Applicable*

* Pursuant to General Instruction D to Schedule TO, no filing fee is required because this filing contains only preliminary communications made before the commencement of a tender offer.

o Check box if any part of the fee is offset as provided by Rule 0-11(a)(2) and identify the filing with which the offsetting fee was previously paid. Identify the previous filing by registration statement number, or the Form or Schedule and the date of its filing.

Amount Previously Paid:______________________________

Form or Registration No.:______________________________

Filing Party:____

Date Filed:____

x Check the box if the filing relates solely to preliminary communications made before the commencement of a tender offer.

Check the appropriate boxes below to designate any transactions to which the statement relates:

x third-party tender offer subject to Rule 14d-1.
o issuer tender offer subject to Rule 13e-4.
o going-private transaction subject to Rule 13e-3
o amendment to Schedule 13D under Rule 13d-2

SECOND QUARTER REPORT 2006 - AUGUST 2, 2006
Based on US GAAP and expressed in US dollars

Barrick Reports Record Earnings and Cash Flow
Legacy Placer Dome Gold Hedge Position Eliminated

- Q2 net income was $459 million ($0.53 per share) and operating cash flow was $643 million ($0.73 per share), both Company records and substantially higher than the prior-year period's net income of $47 million ($0.09 per share) and operating cash flow of $101 million ($0.19 per share).
- Equity gold production was 2.1 million ounces at total cash costs of $281 per ounce[1] , and copper production was 100 million pounds at total cash costs of $0.76 per pound[1]. The Company expects gold production for the second half of 2006 to increase due to stronger operating performances.
- During Q2, the remaining legacy Placer Dome gold hedge position was eliminated. Year-to-date, the Company has reduced its corporate gold sales position by a total of 7.7 million ounces.
- During Q2, Barrick concluded the sale of four Placer Dome mines and other agreed interests to Goldcorp Inc. for net cash proceeds of approximately $1.6 billion.
- The Company is on track to meet its full-year gold production guidance of 8.6 - 8.9 million ounces at total cash costs of $275 - $290 per ounce, and has revised upwards its copper production guidance from 350 million pounds to 370 million pounds and is maintaining total cash costs guidance of about $0.75 - $0.80 per pound.
- On July 24, 2006, Barrick announced all-cash offers for NovaGold Resources Inc. and Pioneer Metals Corporation in order to consolidate the ownership to 100% of the Donlin Creek project and add Galore Creek to its unrivalled project pipeline.

Barrick Gold Corporation today reported net income of $459 million ($0.53 per share) for second quarter 2006, up significantly from net income of $47 million ($0.09 per share) in the year-earlier period. Second quarter 2006 net income was positively impacted by $30 million ($0.03 per share) of special items (see page 9 of Management's Discussion and Analysis for further details).

direct positive impact on our bottom line," said Greg Wilkins, President and CEO. "The result was record earnings and cash flow per share."

PRODUCTION AND COSTS
In second quarter 2006, Barrick produced 2.1 million ounces of gold at total cash costs of $281 per ounce, compared to 1.2 million ounces produced at total cash costs of $243

Operating cash flow for second quarter 2006 was $643 million ($0.73 per share), compared with the prior-year period of $101 million ($0.19 per share).

"As gold and copper prices rose in the second quarter, our operating margins expanded and had a

per ounce for the prior-year quarter. The increase in production year-over-year is due to the successful acquisition of Placer Dome and the contribution from Barrick's new generation of mines.

---

[1] Total cash costs is defined as cost of sales divided by ounces of gold sold or pounds of copper sold. Total cash costs exclude amortization expense and inventory purchase accounting adjustments. For further information on this performance measure see pages 15 to 17 of the Company's MD&A.

BARRICK SECOND QUARTER 2006 RELEASE

Barrick's financial results benefited from the strong gold price, as it realized $592 per ounce on its gold sales, a 40% increase over the prior-year period. As a result, the Company's margin over its total cash costs increased to over $300 per ounce in the current quarter, versus $181 per ounce in the prior-year period. The Company also produced 100 million pounds of copper during the second quarter 2006, and realized $3.49 per pound on its copper sales relative to its total cash costs of $0.76 per pound.

HEDGE BOOK REDUCTION

Barrick believes the long-term outlook for gold prices is positive and has aggressively reduced its gold hedge program. During the second quarter, the remaining legacy Placer Dome gold hedge position was eliminated, for a total reduction of 7.7 million ounces year-to-date. The total cost of reducing the Placer Dome gold hedge position was approximately $1.8 billion, of which $0.3 billion remains to be paid. During the second quarter, the Company's realized price on its gold sales was reduced by $35 per ounce, primarily as a result of hedge accounting adjustments related to the acquired Placer Dome hedge position. The corporate gold sales contract position currently totals 2.8 million ounces, and the Company intends to continue to reduce this position opportunistically, such that it is eliminated by no later than the end of 2009.

REGIONAL RESULTS

North America

The North America region's second-quarter gold production was 0.8 million ounces at total cash costs of $293 per ounce versus 0.6 million ounces at total cash costs of $257 per ounce in the prior-year period. The Company expects North American gold production for the second half of 2006 to be slightly higher primarily due to planned mine sequencing at Bald Mountain and Cortez. Total cash costs for the region increased over the same period primarily due to the mix of production from the acquired mines, higher prices of diesel

At the Cortez Hills project, open-pit mining equipment is being procured, commissioning of a water supply system is ongoing, and development of twin declines for underground exploration continues to advance. During the second quarter, 659 meters of development were advanced, for a total of 1,087 meters of development project-to-date.

At the Pueblo Viejo project, the Company continues to update the feasibility analysis prepared by Placer Dome prior to the acquisition, while concurrently undertaking government and community relations, and environmental permitting. As well, work began on a 3,000-meter, 10-hole diamond drill program to test the extension of mineralization between two ore zones.

Since acquiring control of Placer Dome earlier this year, Barrick has moved decisively at the Donlin Creek project to ensure that the appropriate financial, technical and human resources are being devoted to the timely completion of the required feasibility study. The 2006 budget has been increased from $30 million to $56 million. The number of drills operating at the site have been significantly increased to insure that the 80,000 meters of drilling planned for this year can be completed, ensuring that sufficient drilling information is available to complete the feasibility study. In addition, Barrick has assigned to this project the best qualified technical personnel from both inside of Barrick and externally to ensure that the challenges and opportunities of the project are properly assessed and exploited.

South America

The South America region produced 0.5 million ounces of gold at total cash costs of $176 per ounce in the second quarter 2006 versus 0.2 million ounces of gold at $138 per ounce in 2005 as a result of the start-up of two of Barrick's new generation of mines in the last year. At Lagunas Norte, which has produced over one million ounces of gold since its start-up in June 2005, primary crusher capacity has been increased from

fuel and higher royalties. Goldstrike's total cash costs were reduced in the quarter due to Barrick's new power plant. The Goldstrike property passed a milestone in May 2006 when it poured its 30 millionth ounce of gold since its acquisition 20 years ago.

42,000 tonnes per day to 54,000 tonnes per day. As a result of this increased capacity and higher recovery rates, the mine continues to target production of over one million ounces in 2006. At Veladero, ore grades for leaching are expected to increase as the mine transitions from mining lower grade ore from the Filo Mario pit to higher grade

ore from the Amable pit in the second half of 2006. The Zaldívar copper mine produced 82 million pounds of copper during second quarter 2006 at total cash costs of $0.61 per pound. The Company has increased its 2006 copper production guidance at Zaldívar from 280 million pounds to 300 million pounds due to higher grades.

At the Pascua-Lama project in Chile/Argentina, the Chilean environmental regulatory authorities provided definitive approvals of the development project, when the appeal process was completed in June. In addition, during the quarter, the Argentine evaluation commission reviewing the project's environmental impact assessment requested the submission of a report consolidating all environmental impact assessment and related documentation, which resulted in an adjustment of the target for approvals to the fourth quarter of 2006.

Australia Pacific

The Australia Pacific region's second-quarter gold production was 0.6 million ounces at total cash costs of $306 per ounce versus 0.2 million ounces at total cash costs of $257 per ounce in the prior-year period. At Kalgoorlie, lower production was due to reduced throughput because of mill shutdowns which resulted in higher total cash costs. At Cowal, production commenced in late April, and is expected to ramp up in the second half of the year as throughput and recovery levels increase. Total cash costs for the region increased over the prior-year period due to the new mix of mines, higher prices of input commodities, and consumables, higher energy costs and higher foreign exchange rates.

Africa

The Africa region produced 0.2 million ounces of gold in the quarter at total cash costs of $368 per ounce versus 0.1 million ounces at total cash costs of $344 per ounce in the prior-year period. At North Mara, production is expected to increase in the second half of the year due to accessing ounces of gold production at total cash costs of $560 per ounce. The Company is insured for property damage and a portion of business interruption losses, and has initiated the claims process in connection with this event. The mine's Twin Shaft complex is expected to be back in operation by early 2007.

EXPLORATION UPDATE[2]

The Company is pleased with the year-to-date progress on its exploration programs. Based on successful work to date, the Company has increased its budgets at South Arturo and Cortez.

At the South Arturo deposit, the 2006 drill program has been expanded due to success to date. New mineralization along the Hinge Zone has been discovered and the exploration budget has been doubled to $10 million (100% basis). Four drill rigs continue to drill targets with objectives to better define the ore with infill and extension drilling.

At the Cortez property, the Company is focusing on the Gold Acres Window and other favorable geological terrains. Based on year-to-date success, an additional $8.5 million (100% basis) in funding has been allocated to these drill programs. At Gold Acres, the drill program is working on resource delineation of oxide and refractory mineralization near existing pits as well as targeting new mineralization.

CORPORATE DEVELOPMENT

During the second quarter, the Company concluded the sale of the shares of Placer Dome (CLA) Limited, which owns four Placer Dome mines and other agreed interests, to Goldcorp Inc. Net cash proceeds from the sale were approximately $1.6 billion. There is no impact to earnings nor Barrick's projected 2006 gold production as a result of the transaction.

On July 24, 2006, Barrick announced all-cash offers for NovaGold Resources Inc. and Pioneer Metals Corporation in order to consolidate the ownership to 100% of the Donlin Creek project and add Galore Creek

higher-grade areas of the pit. On May 4, 2006, a loaded skip and 6.7 kilometers of rope fell 1.6 kilometers down the South Deep mine's Twin Shaft complex during routine maintenance, causing extensive damage but no injuries. As a result, the mine site's hoisting capacity has been reduced to 40% for the remainder of the year, and the Company is adjusting its full-year guidance for South Deep to about 150,000

[2] Barrick's exploration programs are designed and conducted under the supervision of Alexander J. Davidson, P. Geo., Executive Vice President, Exploration and Corporate Development of Barrick. For information on the geology, exploration activities generally, and drilling and analysis procedures on Barrick's material properties, see Barrick's most recent Annual Information Form/Form 40-F on file with Canadian provincial securities regulatory authorities and the US Securities and Exchange Commission.

to its unrivalled project pipeline. The proposed NovaGold transaction is valued at approximately $1.29 billion (or $1.53 billion on a fully-diluted basis), while the proposed Pioneer transaction is valued at about C$60.1 million (or C$64.7 million on a fully-diluted basis).

"Having successfully acquired and integrated the Placer Dome mines into our portfolio, the acquisition of NovaGold fits with our strategic plans to further strengthen our project pipeline and meet the challenge of growing our reserve and resource base," said Mr. Wilkins. "Our strong balance sheet gives us the ability to finance this acquisition with cash, thereby increasing our per share leverage to gold and copper."

PLACER DOME INTEGRATION AND 2006 OUTLOOK

The integration of the Placer Dome mines has been completed and the Company has done detailed reviews of all significant operations. Numerous improvements have been identified highlighting 'value add' opportunities in addition to the integration synergies, and will be implemented in the coming months.

The $200 million annual synergies have been specifically identified, and the Company expects to reach the $200-million run rate in 2007.

The Company is reiterating its 2006 gold production guidance of 8.6 - 8.9 million ounces at $275 - $290 per ounce. Full-year copper production guidance has been increased to approximately 370 million pounds and total cash costs guidance has been maintained at about $0.75 - $0.80 per pound. The Company expects gold production for the second half of 2006 to be stronger due to better performances from Veladero, Lagunas Norte, Cortez and North Mara. The Company now expects its 2006 exploration expense to be in the range of $180 - $190 million, project development expense to be about $150 million, and its tax rate to be about 28% - 30%.

* * * * *

Barrick's vision is to be the world's best gold company by finding, acquiring, developing and producing quality reserves in a safe, profitable and socially responsible manner. Barrick's shares are traded on the Toronto, New York, London, Euronext-Paris and Swiss stock exchanges.

[2] Total cash costs per ounce/pound excludes amortization and inventory purchase accounting adjustments. Total cash costs per ounce/pound is a performance measure that is used throughout this Second Quarter Report 2006. For more information see pages 15 to 17 of the Company's MD&A.

MANAGEMENT'S DISCUSSION AND ANALYSIS ("MD&A")

This portion of the Quarterly Report provides management's discussion and analysis of the financial condition and results of operations to enable a reader to assess material changes in financial condition and results of operations as at and for the three and six month periods ended June 30, 2006, in comparison to the corresponding prior-year periods. This MD&A, which has been prepared as of August 2, 2006, is intended to supplement and complement the unaudited interim consolidated Financial Statements and notes thereto, prepared in accordance with US generally accepted accounting principles ("US GAAP"), for the three and six month periods ended June 30, 2006 (collectively, the "Financial Statements"), which are included in this Quarterly Report on pages 29 to 58. You are encouraged to review the Financial Statements in conjunction with your review of this MD&A. This MD&A should be read in conjunction with both the annual audited consolidated Financial Statements for the three years ended December 31, 2005, the related annual MD&A included in the 2005 Annual Report, and the most recent Form 40-F/Annual Information Form on file with the US Securities and Exchange Commission and Canadian provincial securities regulatory authorities. Certain notes to the Financial Statements are specifically referred to in this MD&A and such notes are incorporated by reference herein. All dollar amounts in this MD&A are in millions of US dollars, unless otherwise specified.

For the purposes of preparing our MD&A, we consider the materiality of information. Information is considered material if: (i) such information results in, or would reasonably be expected to result in, a significant change in the market price or value of our shares; or (ii) there is a substantial likelihood that a reasonable investor would consider it important in making an investment decision; or (iii) if it would significantly alter the total mix of information available to investors. We evaluate materiality with reference to all relevant circumstances, including potential market sensitivity.

EXECUTIVE OVERVIEW

Gold production in 2006 has increased substantially over the prior year due to contributions from our three newest mines Lagunas Norte, Veladero and Cowal as well as production from the Placer Dome mines acquired in January 2006. For the three and six month periods ended June 30, 2006 gold production includes 0.66 million and 1.16 million ounces, respectively, from the acquired Placer Dome mines. In second quarter 2006, we produced 100 million pounds of copper from two copper mines acquired with Placer Dome for a total of 172 million pounds of copper produced in the six ended June 30, 2006. Earnings and operating cash flow have increased substantially due to the higher gold production levels and higher realized gold prices, as well as the contribution from copper production at recent high copper prices. Earnings on a per share basis reflect 322.8 million common shares issued in first quarter 2006 to acquire Placer Dome. In second quarter 2006, we received $1.641 billion on closing of the sale of certain Placer Dome operations to Goldcorp, repaid $872 million of debt obligations, and spent $274 million on capital expenditures.

[1] The 2005 comparative period for copper has been omitted as we did not produce any significant amounts of copper prior to the copper mines acquired with Placer Dome.
[2] Gold production and sales, and total cash cost per ounce/pound statistics exclude the results of discontinued operations, and reflect our equity share of production.
[3] Per ounce/pound weighted average.
[4] Total cash costs per ounce/pound statistics exclude amortization and inventory purchase accounting adjustments. Total cash costs per ounce/pound is a performance measure that is used throughout this MD&A. For more information see pages 15 to 17.
[5] Amortization includes inventory purchase accounting adjustments.

At acquisition, Placer Dome had a net obligation to deliver approximately 7.7 million ounces of gold as well as various other derivative positions. The aggregate fair value of these derivative positions was recorded as a liability of $1,707 million on January 20, 2006. This Placer Dome gold hedge position has now been reduced to zero (on a net economic basis). The elimination of these hedges was done via a combination of sales. Due to the impact of hedge accounting for these contracts, for the balance of production for 2006, revenue will be based on selling prices that approximate spot gold prices less a fixed reduction of $97 million of which we expect to record a reduction of $79 million in third quarter 2006 and a further $18 million in fourth quarter 2006. Barrick's remaining fixed-price gold sales contracts stand at 2.8 million ounces of Corporate Gold

financial closeouts and offsetting positions with 4.7 million ounces eliminated in first quarter 2006 and 3 million ounces eliminated in second quarter 2006. The total cash required to date to settle these Placer Dome gold hedge positions has been approximately $1.5 billion, with approximately $0.3 billion to be incurred in future periods for positions which have been economically offset but not yet settled. The cost to closeout the 3.0 million ounces of Placer Dome gold positions in the second quarter 2006 was approximately $0.8 billion.

The acquired Placer Dome positions received hedge accounting treatment from the date of the acquisition until they were eliminated and, therefore, had a designated date and price against specific future gold

Sales Contracts, and a further 9.5 million ounces of Project Gold Sales Contracts which are allocated to our development projects, principally Pascua-Lama and Pueblo Viejo (see pages 24 to 25).

Key Factors Affecting Earnings

($ millions)	Refer to page	Increase Q2 2006 vs. Q2 2005	(decrease) Year to date 2006 vs. 2005

people and mining operations of Placer Dome, consolidation of certain business and exploration offices, and elimination of redundancies between the two organizations. The $200 million in annual synergies have been specifically identified, and we expect reach the $200 million run rate in 2007. In second quarter 2006, we also continued to validate our assumptions as to where we expect to achieve these synergies. We continue to expect these synergies to come from the following areas:

· Administration and offices globally - we expect this area to contribute about 25% of the total synergies based on the closures of redundant offices around the world.
· Exploration - This area contributes about 25% of the total synergies.
· Operations and technical services - This area comprises about 30%. Value is being driven from sharing of best practices; project optimization; supply chain management; continuous improvement; and research and development.
· Finance and tax - We see opportunities for debt consolidation, reduced fees and costs, and tax planning, which comprise about 20% of the total synergies.

Offers to acquire NovaGold Resources Inc. and Pioneer Metals Corporation

On July 24, 2006 we announced our intention to make an all cash offer of $14.50 per share for all the outstanding shares of NovaGold Resources Inc. ("NovaGold"). The acquisition of NovaGold would enable us to consolidate our interest in the Donlin Creek project in Alaska, USA, acquire a 100% interest in the Galore Creek project in British Columbia, Canada and a 100% interest in the Rock Creek open-pit gold deposit, in Nome, Alaska, which is targeted to begin commercial production in 2007.[1] NovaGold's other assets at May 31, 2006 included cash of $184 million, and investments with a market value of about $66 million.[2] Based on the outstanding equity securities of NovaGold at

Total	**$ 30**	$ 19	**$ 3**	$ 28

[1] Amounts are presented on a post-tax basis.

July 24, 2006, the cost of acquiring 100% of NovaGold would be $1.53 billion on a fully diluted basis.

Also on July 24, 2006 we announced that we had reached an agreement with Pioneer Metals Corporation ("Pioneer"), whereby it will support Barrick's offer to acquire all its outstanding common shares for cash consideration of C$1.00 per share or approximately C$64.7 million on a fully diluted basis. Pioneer has a portfolio of exploration properties and interests, including the Grace property which is adjacent to NovaGold's Galore Creek project.

[1] [1] As per NovaGold's Annual Report 2005.

[2] As per NovaGold's Second Quarter Report 2006. Dollar amounts were converted to US dollars using the month-end rate.

Acquisition of Placer Dome

In second quarter 2006, we completed the sale of shares of Placer Dome (CLA) Limited to Goldcorp Inc. On completion of the transaction, Goldcorp assumed interests in all of Placer Dome's Canadian operations (other than its office in Vancouver), including all mining, reclamation and exploration properties, Placer Dome's interest in the La Coipa mine in Chile, and a 40% interest in the Pueblo Viejo project in the Dominican Republic, for cash consideration of about $1.641 billion.

In second quarter 2006, we completed the integration of Placer Dome mines. The integration plan, which we began immediately following the acquisition of Placer Dome in first quarter 2006, focused on integrating the

2006 Outlook
While our original guidance for consolidated gold production and total cash costs remains unchanged, we have updated our 2006 guidance for copper production, exploration expense, project development expense and our effective tax rate. Higher copper production mainly reflects improved ore grades at Zaldivar. Higher exploration expense and project development expense mainly reflects higher projected levels of activity at our various development projects and exploration programs. The lower expected income tax rate mainly reflects changes in the expected geographical mix of income.

For the year ended December 31	**2006E**

KEY ECONOMIC TRENDS

Gold, Silver and Copper Prices
In second quarter 2006, gold prices ranged from $543 to $730 per ounce with an average market price of $627 per ounce. The price of gold continued its upward trend in the first half of the quarter largely due to strong investment demand, geopolitical concerns, rise in the second quarter supported by strong market fundamentals, reaching a high of $3.99 per pound in May and closing at $3.37 per pound at the end of June 2006. We are optimistic that continuing strong demand and supply constraints in the copper market will provide ongoing support for copper prices.

Currency Exchange Rates
About 70-75 percent of our production costs are denominated in US dollars and are therefore not exposed to fluctuations in US dollar exchange rates. For the remaining portion of our production costs that are denominated in other currencies, our currency hedge position has mitigated to a significant extent the effect of the weakening of the US dollar over the last few years on operating costs at our Australian and Canadian mines. With the Placer Dome acquisition, our inherent exposure to the Australian dollar and South African rand increased. About one third of our Australian dollar expenditures over the next three years are exposed to changes in Australian dollar exchange rates. Operating expenditures in South Africa are fully exposed to changes in the South African rand, which weakened in the second quarter as investors sold emerging market currencies to the benefit of the US dollar as the US Federal Reserve continued to raise interest rates. Further information on our currency hedge position is included in note 15 to the Financial Statements.

Other Commodities and Consumables
The mining industry continues to experience price inflation for many commodities and consumables used in the production of gold and copper, as well as, in some cases, constraints on supply. We continue to seek ways to mitigate these risks. To help mitigate rising oil prices and control the cost of fuel consumption, we have a fuel hedge position totaling 2.4 million barrels of oil, which represents about 17% of our total estimated consumption through 2010. The fuel hedge contracts are primarily designated for our

and a weakening US dollar, before retracting to levels comparable to those observed early in the quarter. The sell off was partly triggered by lower physical demand and fund selling. We remain confident that gold prices will remain strong for the same reasons that have caused gold prices to rise over the first half of 2006, and as investors continue to show interest in gold.

Silver prices reached a high of $15.17 per ounce in May 2006, and have risen more than 16% since the beginning of the year, largely due to the silver ETF launched in the second quarter. We expect silver prices to remain buoyant as investors focus on earning increased returns over traditional investments. Copper prices continued to

Goldstrike, Round Mountain, and Kalgoorlie mines and have an average price of $51 per barrel, about 30% lower than recent market prices.

In 2005, we completed construction of a power plant in Nevada for our Goldstrike mine, designed to enable us to lower the cost of power consumed at the mine. The plant has enabled us to lower the cost per kwh from approximately 8 cents to 6.6 cents in 2006, with a corresponding decrease in the total cash costs of gold produced at Goldstrike of about $8 per ounce in the first half of 2006. We have initiated an energy management program with a goal to reduce energy consumption and the cost of energy at our operating mines and projects. Renewable energy sources are being considered as part of this program.

US Dollar Interest Rates

Short-term US dollar interest rates rose in 2006 as the US Federal Reserve continued its tightening cycle. We presently expect long-term interest rates to rise slightly as the front end of the interest rate curve rises due to inflation risks. Volatility in interest rates mainly affects interest receipts on our cash balances ($1.4 billion cash at the end of second quarter 2006), and interest payments on variable-rate debt ($1.1 billion of variable-rate debt at the end of second quarter 2006).

CONSOLIDATED GOLD AND COPPER PRODUCTION, SALES AND COSTS

In second quarter 2006, gold production and sales increased substantially over the prior year period, due to the acquired Placer Dome mines and production from Lagunas Norte, Veladero and Cowal. In second quarter 2006, we produced 100 million pounds of copper for a total of 172 million pounds in the first six months of 2006.

Realized gold prices have increased significantly in 2006 compared to the same period in 2005 due to the trend of rising market gold prices. Realized gold prices of $592 per ounce in second quarter 2006 were $168 higher than in second quarter 2005, due to higher market gold prices, but reflect a reduction of about $35 per ounce primarily due to hedge accounting adjustments relating to the impact of hedge accounting for the acquired Placer Dome gold hedge position from the date of acquisition through the date the position was eliminated. Cash margins on gold, representing the difference between realized gold selling prices and total cash costs, have increased by $130 per ounce, or 72%, in second quarter 2006 compared to the prior year period, as gold price increases have more than offset increases in total cash costs over the same period. Realized copper prices have also increased significantly over the course of 2006, reflecting the trend of higher market copper prices in the first half of the year.

Consolidated Total Cash Costs per Ounce/Pound[1]

	Three months ended June 30			Six months ended June 30

1 Total cash costs per ounce/pound and cost of sales per ounce/pound both exclude amortization and inventory purchase accounting adjustments - see page 17.

2 At market currency exchange and commodity rates, adjusted for non-controlling interests - see page 17.

3 Excludes costs of sales related to discontinued operations.

Total cash costs in second quarter 2006 for gold were higher than the prior-year period, primarily because, on average, costs at the

RESULTS OF OPERATING SEGMENTS

acquired Placer Dome mines are higher than at our legacy mines. The effects of rising commodities and consumables prices, higher royalty costs and processing of lower-grade ore at some of our mines were partly offset by lower-cost production from Lagunas Norte that began in the second half of 2005 and the availability of higher-grade ore at Goldstrike in the first half of 2006.

In our Financial Statements, we present a measure of historical segment income that reflects gold sales at average consolidated realized gold prices, less segment expenses and amortization of segment property, plant and equipment. We monitor segment expenses using "total cash costs per ounce" and "total cash costs per pound" statistics that represent segment cost of sales, less inventory purchase price adjustments, divided by ounces of gold and pounds of copper sold in each period. The discussion of results focuses on these statistics in explaining changes in segment expenses.

North America

Producing Mines

Through the Placer Dome acquisition we acquired 4 producing mines. The mines acquired from Placer Dome are Cortez (60% owned), Turquoise Ridge (75% owned) and Bald Mountain in Nevada, and Golden Sunlight in Montana. We also acquired three significant projects: Cortez Hills, within the Cortez Joint Venture area of interest in Nevada (60% owned); Pueblo Viejo in the Dominican Republic (60% owned); and Donlin Creek in Alaska (30% owned with earn-in rights to 70%). In second quarter 2006, gold production increased by 32% over the prior-year period, with the mines acquired through Placer Dome accounting for 30% of the increase. The remaining increase in production is mainly due to increased production at Goldstrike as a result of mining higher-grade material and improved gold recovery rates at the autoclave facility. Temporary lower production levels are being experienced at Round Mountain and Cortez mainly due to layback work leading to fewer ore tons mined (and more waste) at Round Mountain, and a combination of fewer ore tons mined and lower ore grades at Cortez. Due to pit wall instability at Golden Sunlight, production levels have been lower, but remediation work is nearing completion and increases have been partially mitigated by higher-than expected silver by-product credits at Eskay Creek due to high market silver prices and higher silver grades in the material produced, and lower power costs at Goldstrike, which is benefiting from the Western 102 power plant. We continue to expect to meet our original full-year 2006 guidance for gold production and total cash costs for the North America region.

Significant Projects

At the Ruby Hill mine project, an open-pit, heap-leach operation exploiting the East Archimedes deposit, construction costs of $7 million were spent during the second quarter 2006, mainly for pre-production waste stripping activities that will continue throughout 2006, with first gold production expected in early 2007.

At the Cortez Hills project, which involves the development of two adjacent deposits - Cortez Hills and Pediment - within the Cortez Joint Venture area of interest, second quarter 2006 activities consisted primarily of the ongoing procurement of open-pit mining equipment, commissioning of a water supply system for the underground portion of the project, and driving an additional 659 meters of underground exploration development for a

production levels at the mine are expected to increase in the second half of 2006.

Total cash costs per ounce in the second quarter 2006 were 14% higher than the same period in 2005 mainly due to higher prices of input commodities and consumables used in the production process, higher royalties and production taxes due to higher market gold prices and also because average total cash costs of the acquired Placer Dome mines are higher than those of the legacy Barrick mine sites. At Cortez and Round Mountain, the temporary lower production levels have also contributed to higher total cash costs. These cost

total of 1,087 meters of development project-to-date. The underground portion of the project consists of twin declines being driven from portals within an existing open pit for exploration of the area underneath the proposed Cortez Hills open pit. Geological, geotechnical and hydrological site data continues to be collected for use in the underground pre-feasibility study. Surface construction activities related to the open pit portion of the project, which include leach pad construction, crusher and conveyor installation, and pre-production waste stripping, will commence once the required permits are obtained.

At the Pueblo Viejo project, we continued to update the feasibility analysis prepared by Placer Dome prior to the acquisition and we are reviewing other work completed on the project. Concurrent with the review and update of the feasibility analysis, activities relating to government and community relations and environmental permitting for both the mine and the related power plant are ongoing. In addition, work began on a 3,000-meter, 10-hole diamond drill program to test the extension of mineralization between two ore bodies. In May 2006, a joint venture agreement with Goldcorp was finalized, which establishes Barrick as the 60% owner and operator of the project.

The Donlin Creek project is a large refractory gold deposit in Southwestern Alaska, under lease from two Alaska aboriginal corporations until 2015 and so long thereafter as mining operations are carried out at the Donlin Creek property. The Donlin Creek property is being explored and developed under a Mining Venture Agreement between NovaGold and wholly-owned subsidiaries of Barrick entered into in November 2002. Under the terms of such agreement, Barrick currently holds a 30% interest in the project with the right to increase that interest to 70% by satisfying the following conditions on or before November 12, 2007: (1) funding of $32 million of exploration and development expenditures on the project; (2) delivering a feasibility study to NovaGold; and (3) obtaining the approval of Barrick's Board of Directors to construct a mine on the property. At the end of March 2006, Barrick satisfied the funding condition. Barrick is currently taking the steps necessary to complete the required feasibility study and intends to present the project to its Board of Directors for approval in due course.

Since acquiring control of Placer Dome Inc. earlier this year, Barrick has moved decisively to ensure that the appropriate financial, technical and human resources are being devoted to the timely completion of the required feasibility study. The 2006 budget

South America

Producing Mines

Gold production was higher in second quarter 2006 compared to the prior-year period, mainly because of the start-up of the Lagunas Norte and Veladero mines in the second half of 2005, partly offset by lower production at Pierina with mining of deeper, lower-grade areas of the deposit. At Lagunas Norte, which has produced over one million ounces of gold since its start-up in June 2005, primary crusher capacity has been increased from 42,000 tonnes per day to 54,000 tonnes per day. As a result of this increased capacity and higher recovery rates, the mine continues to target production of over one million ounces in 2006. At Veladero, after the transition of mining from the Filo Mario pit to the higher-grade ore from the Amable pit in the second half of 2006, we expect gold production to increase. All three mines benefited from higher silver by-product credits in second quarter 2006, but continue to be impacted by higher prices for input commodities and consumables, leading to higher total cash costs in 2006.

At Zaldívar, a copper mine that we acquired through the Placer Dome acquisition, we produced 82 million pounds of copper in second quarter 2006 at total cash costs of $0.61 per pound. Higher production during the second quarter 2006 was mainly due to better equipment availability and the acquisition of three more haul trucks, combined with changes in mine sequencing to mitigate a temporary period of lower conveyor capacity at the crusher. Total cash costs per pound were better than expected, mainly due to the higher production levels.

We continue to expect to meet our original full-year 2006 guidance for gold production and total cash costs for the South America region. Copper production guidance has been increased from 280 million pounds to about 300 million pounds mainly due to higher ore grades, and we are maintaining total cash costs guidance of about $0.65 per pound.

has been increased from $30 million to $56 million. The number of drills operating at the site have been significantly increased to insure that the 80,000 metres of drilling planned for this year can be completed, ensuring that sufficient drilling information is available to complete the feasibility study. In addition, Barrick has assigned to this project the best qualified technical personnel from both inside of Barrick and externally to ensure that the challenges and opportunities of the project are properly assessed and exploited.

Significant Projects

In second quarter 2006, the Chilean environmental regulatory authorities announced that they had rejected 44 out of 46 individual appeals relating to the development of the Pascua-Lama project. Two reinforcing conditions already stipulated in the environmental impact assessment, which was approved in February 2006 (Resolution RCA 024), related to water quality monitoring and noise mitigation. The Resolution granted imposes other conditions on the development of the project, the implications of which could result in the reduction of reserves by up to 1 million ounces for US reporting purposes, as previously reported. Analysis of the effect of the conditions is ongoing. In second quarter

2006, the evaluation commission reviewing the project environmental impact assessment in Argentina requested the submission of a report (on or before August 4th) consolidating all environmental impact assessments in Argentina and related documentation, including responses to public questions and related reference materials. Accommodating this request coupled with the other procedural steps in the Argentine review process has resulted in an adjustment of the target for approvals to the fourth quarter of 2006. The timing of receipt of such approval, as well as the resolution of other external matters, such as permitting and licensing, resolution of objections or challenges to project approval, cross-border approvals and operating issues and fiscal, tax and royalty items are largely beyond the control of the Company. We are in the course of updating cost estimates to reflect inflationary cost pressures. Although inflationary cost pressures are putting upward pressure on capital and production cost estimates, when considered with design improvements and other economic factors, the overall economics of the Pascua-Lama project are expected to improve.

Australia Pacific

Producing Mines

Through the Placer Dome acquisition, we acquired four producing gold mines and a copper-gold mine. The acquired Placer Dome gold mines are Porgera (75% owned) in Papua New Guinea, and Kanowna, Granny Smith and Henty, in Australia. Production in second quarter 2006 was higher than the same period in the prior year mainly due to the contribution from the acquired Placer Dome mines combined with the production start-up at Cowal, partly offset by lower production from Kalgoorlie. At Cowal, our new mine located in Central New South Wales, Australia, production start-up was achieved during second quarter 2006 with production of about 16,000 ounces. Total construction costs were about $400 million, 7% higher than the most recent estimates. Production is expected to ramp up in the second half of production levels and higher maintenance costs at Kalgoorlie, combined with the impact of higher prices for input commodities and consumables used in the production process, higher exchange rates under hedge contracts, and also because average total cash costs of the acquired Placer Dome mines are higher than those of the legacy Barrick mine sites. We continue to expect to meet our original full-year 2006 gold production and total cash costs guidance for the Australia Pacific region.

The Osborne copper mine produced 18 million pounds of copper in second quarter 2006 at total cash costs per pound of $1.46. Copper production improved in second quarter 2006 compared to first quarter 2006 with higher throughput. We expect to access lower elevations of the mine and higher-grade ore later in 2006 that should lead to improving production levels and total cash costs. We continue to expect to meet our original 2006 guidance for copper production and total cash costs per pound.

Africa

Through the Placer Dome acquisition, we acquired two producing gold mines in Africa, South Deep (50% owned) in South Africa, and North Mara in Tanzania. Gold production in second quarter 2006 was higher than the prior-year period due to the contribution of the acquired Placer Dome mines together with higher production at Bulyanhulu and Tulawaka. Production at North Mara in second quarter 2006 continued to be impacted by reduced shovel capacity, but we expect improvements in the second half of the year, together with the benefits of increased drilling capacity from two new drill rigs. Ore grades at North Mara continue to improve as we move into lower elevation areas in the pit.

On May 4, 2006, a loaded skip and 6.7 kilometers of rope fell 1.6 kilometers down the South Deep mine's Twin Shaft complex during routine maintenance, causing extensive damage but no injuries. As a result,

2006 as throughput and recovery levels increase. At Kalgoorlie, lower production in second quarter 2006 compared to the prior-year period was caused by lower throughput due to mill shutdowns for a planned and unplanned maintenance due to harder ore encountered. At Porgera, low-grade long-term stockpiles continued to provide the primary ore feed in second quarter 2006. Remediation of the West Wall cutback continues and is about 50% complete. We expect mining of ore in the pit to begin later in 2006, following which production levels and total cash costs should improve.

Total cash costs per ounce were higher in second quarter 2006 than the prior-year period mainly due to lower

the mine site's hoisting capacity has been reduced to 40% of normal capacity for the remainder of the year. We are evaluating opportunities to increase the hoisting rate of the south shaft during the repair period. As a consequence, we are adjusting our share of full-year guidance for South Deep to about 150,000 ounces of gold production at total cash costs of $560 per ounce. We expect that the main shaft will be back in operation by early 2007, at which time gold production levels should return to similar levels prior to the incident. We are insured for property damage and a portion of business interruption losses, and have initiated the claims process in connection with this incident.

Total cash costs per ounce for the second quarter 2006 were higher than the prior-year period mainly due to the lower production levels at South Deep, combined with the impact of higher prices for input commodities and consumables used in the production process, partly offset by the impact of depreciation of the South African Rand relative to the US dollar in the quarter which had a $6 per ounce favorable impact on total cash costs per ounce for the region.

Significant Projects
At the Sedibelo platinum deposit in South Africa, where we have a 50% earn in right, work on a pre-feasibility study commenced in second quarter 2006. Completion of the pre-feasibility is targeted for late 2007. A Barrick project manager has been appointed as well as engineering consultants. Drilling continues to define additional resources and provide samples for metallurgical test work.

Russia/Central Asia
Our equity share of Highland Gold production was about 9,000 ounces at total cash costs of $494 per ounce in second quarter 2006. Higher total cash costs in second quarter 2006 were mainly due to drawdowns of higher cost ore inventory. We continue to advance exploration programs and participate in auctions for exploration properties.

The Taseevskoye project (50% owned) is a previously mined open-pit and underground mine which, in light of the strong gold price environment, is being re-evaluated. The $21 million project budget for 2006 primarily includes a drill program to enable completion of a pre-feasibility study targeted by year-end. With the return to summer working conditions and the availability of five drill rigs on site, drilling is progressing with 6,600 meters completed since early April of a planned 35,000 meter program.

Exploration

resulted in the scope of the project being expanded. The original exploration budget has been doubled to $10 million (100% basis), and four drill rigs continue to drill targets. Objectives for the second half of the year are to better define the ore with infill and extension drilling, and complete metallurgical work and engineering studies. At the Cortez property, we are focusing on the Gold Acres Window ("Gold Acres"), and other favorable geological terrains. Based on year-to-date success, an additional $8.5 million (100% basis) in funding has been allocated to these drill programs. At Gold Acres, the drill program is working on resource delineation of oxide and refractory mineralization near existing pits as well as targeting new mineralization.

TOTAL CASH COSTS PERFORMANCE MEASURES

Total cash costs include all costs absorbed into inventory, including royalties, by-product credits, production taxes and accretion expense, except for inventory purchase accounting adjustments and amortization. We calculate total cash costs based on our equity interest in production from our mines. Total cash costs per ounce/pound are calculated by dividing the aggregate of these costs by gold ounces or copper pounds sold. Total cash costs and total cash costs per ounce/pound are calculated on a consistent basis for the periods presented. In our income statement, we present amortization separately from cost of sales. Some companies include amortization in cost of sales, which results in a different measurement of cost of sales in the income statement. We have provided below reconciliations to illustrate the impact of excluding amortization and inventory purchase accounting adjustments from total cash costs per ounce/pound statistics. Under purchase accounting rules, we recorded the fair value of acquired work in progress and finished goods inventories as at the date of Placer Dome acquisition. As the acquired inventory is sold, any purchase accounting

In second quarter 2006, we spent $44 million on exploration activities, an increase of $15 million from the prior year period. This increase was mainly due to exploration activity at our mine sites in Australia, combined with exploration activities at acquired Placer Dome mine sites, and the South Arturo deposit and Cortez properties in Nevada. Based on favorable results from work to date, we have increased planned spending at South Arturo and Cortez in 2006.

At the South Arturo deposit, the planned 2006 drill program was completed in the first half of the year. New mineralization along the Hinge Zone has been discovered and, combined with other successful work to date, has

adjustments reflected in the carrying amount of inventory at acquisition impact cost of sales. The method of valuing these inventories is based on estimated selling prices less costs to complete and a reasonable profit margin. Consequently, the fair values do not necessarily reflect costs to produce consistent with ore mined and processed into gold and copper after the acquisition. Our internal presentation of total cash costs reflects those costs that are incurred in the production and sale of gold and copper, and we exclude the impact of purchase accounting adjustments. The presentation of these statistics in this manner allows us to monitor and manage those factors that impact production costs on a monthly basis.

We present total cash costs based on our equity interest in gold production. We believe that using an equity

interest presentation is a fairer, more accurate way to measure economic performance than using a consolidated basis. For mines where we hold less than a 100% share in the production, we exclude the economic share of gold production that flows to our partners who hold a non-controlling interest. Consequently for the South Deep and Tulawaka mines, although we fully consolidate these mines in our Financial Statements, our production and total cash cost statistics only reflect our equity share of the production.

In managing our mining operations, we disaggregate cost of sales between amortization and the other components of cost of sales. We use total cash costs per ounce/pound statistics as a key performance measure internally to monitor the performance of our regional business units. We use the statistics to assess how well our regional business units are performing against internal plans, and also to assess the overall effectiveness and efficiency of our mining operations. We also use amortization costs per ounce/pound statistics to monitor business performance. By disaggregating cost of sales into these two components and separately monitoring them, we are able to better identify and address key performance trends. We believe that the presentation of these statistics in this manner in our MD&A, together with commentary explaining trends and changes in these statistics, enhances the ability of investors to assess our performance. These statistics also enable investors to better understand year-on-year changes in cash production costs, which in turn affect our profitability and ability to generate cash flow.

The principal limitation associated with total cash costs per ounce/pound statistics is that they do not reflect the total costs to produce gold/copper, which in turn impacts the earnings of Barrick. We believe that we have compensated for this limitation by highlighting the fact that total cash costs exclude amortization and inventory purchase accounting adjustments as well as providing details of the financial effect. We believe that the benefits of providing disaggregated information outweigh the limitation in the method of presentation of total cash costs per ounce/pound statistics.

Total cash costs per ounce/pound statistics are intended to provide additional information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with US GAAP. The measures are not necessarily indicative of operating profit or cash flow from operations as determined under US GAAP. Other companies may calculate these measures differently.

Illustration of Impact of Excluding Certain Costs from Total Cash Costs per Ounce/Pound

[1] For explanation of changes in sales volumes refer to page 11.
[2] Other includes increases/decreases in amortization expense due to additions/dispositions of property, plant and equipment, purchase accounting adjustments and the impact of historic changes in reserve estimates on amortization (refer to page 27).

Amortization expense recorded in the first half of 2006 reflects preliminary purchase price allocations for the acquired Placer Dome mines. Valuations are in progress for the acquired mines but will not be finalized until the second half of 2006, at which time we will prospectively revise amortization calculations to reflect any adjustments to the preliminary allocation. Any adjustments could cause amortization to increase or decrease significantly in future periods.

Corporate Administration, Interest Income and Interest Expense

($ millions)	Three months ended June 30		Six months ended June 30		
	2006	2005	**2006**	2005	Comments on significant trends and variances
Corporate administration	**$ 31**	$ 19	**$ 65**	$ 36	Increases in 2006 reflect the impact of costs incurred at the Placer Dome head office in Vancouver in the period prior to closure, augmentation of staffing at the Barrick head office in Toronto in response to the acquisition and stock option expense in 2006 (Q2 2006: $5 million; first half of 2006: $9 million).
Interest income	**25**	11	**52**	19	Higher interest income in 2006 was mainly due to higher cash balances in 2006; higher interest rates in 2006, and a financing fee payable by Goldcorp representing, in part, compensation for interest costs incurred by us to carry the cost of financing, related to certain operations to be sold to Goldcorp (Q2 2006: $8 million; first half of 2006: $19 million).
Interest costs					
Incurred	**67**	31	**125**	59	Higher interest costs in 2006 were mainly due to $1.1 billion of debt assumed on the acquisition of Placer Dome, combined with interest relating to funds drawn under a credit facility that were used for the cash component of the cost of acquisition of Placer Dome.
Capitalized	**23**	30	**49**	58	In 2005, interest was capitalized for the construction phase of Veladero, Lagunas Norte, the Western 102 Power Plant and Cowal; as well as for the Pascua-Lama development project. In 2006, interest was capitalized at Cowal and Pascua-Lama.

Total	**$ 11**	$ 5	**$ (12)**	$ 10	

Income Taxes

Income tax expense of $131 million in second quarter 2006 included a $13 million expense from tax rate changes in Canada. Excluding the impact of the tax rate changes, the underlying effective tax rate was 20% compared to 13% in second quarter 2005. The underlying effective rate increased, primarily due to higher market gold prices, and a shift in the geographic mix of production following the acquisition of Placer Dome.

Our expected underlying effective tax rate is about 28% to 30%, at current market gold prices. This expected underlying rate excludes the effect of delivering into gold sales contracts in a low tax-rate jurisdiction at prices below prevailing market prices, the impact of tax rate changes and any changes in deferred tax valuation allowances.

We record deferred tax charges or credits if changes in facts or circumstances affect the estimated tax basis of assets and therefore the amount of deferred tax assets or liabilities or because of changes in valuation allowances reflecting changing expectations in our ability to realize deferred tax assets. The interpretation of tax regulations and legislation and their application to our business is complex and subject to change. We have significant amounts of deferred tax assets, including tax loss carry forwards, and also deferred tax liabilities. Potential changes to any of these amounts, as well as our ability to realize deferred tax assets, could significantly affect net income or cash flow in future periods.

Quarterly Information ($ millions, except where indicated)

	2006		2005				2004	
	Q2	**Q1**	Q4	Q3	Q2	Q1	Q4	Q3
Sales	**$ 1,556**	**$ 1,254**	$ 776	$ 627	$ 463	$ 484	$ 501	$ 500
Net income	**459**	**224**	175	113	47	66	156	32
Net income per share - basic (dollars)	**0.53**	**0.29**	0.33	0.21	0.09	0.12	0.30	0.06
Net income per share - diluted (dollars)	**0.53**	**0.29**	0.32	0.21	0.09	0.12	0.29	0.06

Our financial results for the last eight quarters reflect the following general trends: rising spot gold prices with a corresponding rise in prices realized from gold sales; and rising gold production and sales volumes as our new mines began production in 2005 and, in first quarter 2006, our acquisition of Placer Dome. Results in 2006 benefited from the contribution of gold and copper mines acquired in the Placer Dome acquisition. These historic trends are discussed elsewhere in this MD&A. The quarterly trends are consistent with explanations for annual trends over the last two years. Net income in each quarter also reflects the timing of various special items that are presented in the table on page 9.

[1] Includes both construction costs and capitalized interest.

Investing activities in 2006 also included $1,262 million in first quarter 2006 paid for the cash component of the cost of the Placer Dome acquisition, which net of cash acquired of $1,102 million, led to a net cash outflow of $160 million. We recorded in cash flows of discontinued operations proceeds of $1.641

Alternatives for sourcing our future capital needs include our significant cash position, unutilized credit facilities, future operating cash flow, project financings and public debt financings. These alternatives are evaluated to determine the optimal mix of capital resources for our capital needs.

billion received on closing of the sale of certain Placer Dome operations to Goldcorp in second quarter 2006.

Financing Activities
The most significant financing cash flows in second quarter 2006 were cash payments totaling $880 million to settle Placer Dome derivative positions, and $847 million in repayments of outstanding credit facilities. Also, in second quarter 2006, we issued $50 million of public debt in Peru, we received $23 million on the exercise of employee stock options, we made scheduled payments under long-term debt obligations totaling $25 million, and we paid dividends of $96 million.

Liquidity
Liquidity Management
In managing our liquidity we maintain cash positions and put in place financing in our regional business units as well as at the Corporate Center to provide adequate liquidity for our operations. Furthermore, we assess our long-term financial requirements and plan our financing strategy accordingly.

We expect that, absent a material adverse change in a combination of our sources of liquidity, present levels of liquidity will be adequate to meet our expected capital needs. If we are unable to access project financing due to unforeseen political or other problems, we expect that we will be able to access public debt markets as an alternative source of financing.

Capital Resources
In second quarter 2006, on repayment of $510 million outstanding under a $1 billion credit facility and $337 million outstanding under an $850 million second facility, there was a corresponding increase in the available undrawn amounts under these facilities.

In early August 2006, we increased our $1 billion credit facility to $1.5 billion. We plan to finance the acquisition of NovaGold Resources Inc. and Pioneer Metals Corporation from a combination of existing credit

facilities and cash on hand. We may also consider adding longer-term financing as part of our funding needs.

BALANCE SHEET

Shareholders' Equity

Outstanding Share Data

As part of the consideration paid in connection with the acquisition of Placer Dome, we issued 322.8 million common shares to Placer Dome shareholders in exchange for their ownership interest. As at July 19, 2006, 862.5 million of our common shares, one special voting share and 1.4 million exchangeable shares (exchangeable into 0.7 million of our common shares) were issued and outstanding. As at July 19, 2006, options to purchase 18.6 million common shares were outstanding under our option plans, as well as options to purchase 2.1 million common shares under certain option plans inherited by us in connection with prior acquisitions, including Placer Dome.

Comprehensive Income

Comprehensive income consists of net income or loss, together with certain other economic gains and losses that collectively are described as "other comprehensive income" or "OCI", and excluded from the income statement. In second quarter 2006, the other comprehensive income of $7 million mainly was the result of income tax recoveries on gains and losses in OCI. Losses of $34 million primarily on currency and gold hedge contracts designated for future periods. caused primarily by changes in market gold prices, were more than offset by reclassification adjustments totaling $35 million for gains on hedge contracts designated for second quarter 2006 that were transferred to earnings in second quarter 2006.

Included in other comprehensive loss at June 30, 2006 were unrealized pre-tax gains on currency and gold hedge contracts totaling required to complete construction of our development projects because commitments have yet to be made for all of the estimated future capital costs. As part of an arrangement with Antofagasta PLC ("Antofagasta") to acquire 50% of Tethyan Copper Company ("Tethyan") we have agreed to reimburse Antofagasta approximately $115 million in cash in the second half of 2006, representing approximately 50% of the cost of acquisition of Tethyan, including costs to terminate claw-back rights in certain of Tethyan's mineral interests, currently held by BHP Billiton. As part of our all-cash offers to acquire all of the outstanding shares of NovaGold and Pioneer, we have committed to spend about $1.5 billion and C$65 million, on a fully diluted basis, respectively.

GOLD SALES CONTRACTS

As described on page 8, on acquisition of Placer Dome we acquired its pre-existing gold hedge position totaling 7.7 million ounces of committed gold obligations, which was recorded on our balance sheet at its estimated fair value based on market gold price of $567 per ounce on the date of acquisition. Acquired gold forward sales contracts were designated as cash flow hedges of future gold production. From the date of acquisition to the date we eliminated the acquired hedge position, the mark-to-market value of these acquired contracts changed by $151 million, which was recorded in OCI and in the balance sheet as a hedge loss. Revenue reported each period represents the cash proceeds for either spot sales or under pre-existing Barrick normal sales contracts less an adjustment for the hedge loss in OCI based on the hedge designation schedule. We recorded a reduction of revenue by about $70 million in second quarter 2006 for these hedge losses and amounts in future periods are expected to be as follows: Q3 2006: $79 million reduction; Q4 2006: $18 million reduction; 2007 and beyond: $16 million increase. The

$105 million, based on June 30, 2006 market gold prices and foreign exchange rates. The related hedge contracts are designated against gold sales primarily over the next twelve months, operating costs, and capital expenditures primarily over the next three years. The hedge gains/losses are expected to be recorded in earnings at the same time that the corresponding hedged sales or operating costs and amortization of capital expenditures are also recorded in earnings.

CONTRACTUAL OBLIGATIONS AND COMMITMENTS

Purchase obligations include only those items where binding commitments have been entered into. They do not include the full amount of future capital expenditures

other acquired Placer Dome derivative instruments were all classified as non-hedge derivatives from the date of acquisition. The terms of the derivatives we acquired in the Placer Dome acquisition were significantly different than market terms at the date of acquisition, resulting in our recognition of a significant liability at inception. This liability contained an other-than-insignificant financing element. As a result, and in accordance with US GAAP, we report all cash inflows and outflows on these derivatives under financing activities in the cash flow statement.

The MD&A included in our 2005 Annual Report contained a detailed discussion of our gold sales contracts. In this interim MD&A, we have included an update of any significant changes in these contracts. For presentation purposes, we consider Project Gold Sales Contracts to

represent gold hedges allocated to Pascua-Lama and to Pueblo Viejo (totaling 9.5 million ounces), which we believe may facilitate financing of these projects and may eliminate the possible requirement to add hedges in the future associated with financing these projects. The Corporate Gold Sales Contracts represent our remaining fixed-price sales contracts. All our gold and silver sales contracts (including Project Gold Sales Contracts, Corporate Gold Sales Contracts and Floating Spot-Price Gold Sales Contracts) retain all the benefits of our Master Trading Agreements ("MTAs") and are not subject to margining, downgrade or unilateral and discretionary "right-to-break" provisions. The MTAs with our counterparties do provide for early close out of certain transactions in the event of a material adverse change in our ability, or our principal hedging subsidiary's ability, to perform our, or its, gold and silver delivery and other obligations under the trading agreements and related parent guarantees or a lack of gold or silver market, and for customary events of default such as covenant breaches, insolvency or bankruptcy. At June 30, 2006, we were in compliance with all terms and covenants associated with our MTAs.

Key Aspects of Project Gold Sales Contracts

As of June 30, 2006	
Expected delivery dates.[1]	2009-2018, the term of the expected financings of the projects.
Future estimated average realizable selling price.	$392/oz.[2]

[1] The contract termination dates are in 2016-2019 in most cases, but we currently expect to deliver project production against these contracts starting in 2009, subject to the timing of receipt of approvals of the environmental impact assessments, as well as the resolution of other external issues, both of which are largely beyond our control. Refer to page 13 for further details.

[2] Upon delivery of production from 2009-2018, the term of expected financing. Approximate estimated value based on current market US dollar committed delivery dates primarily in 2016 and beyond. We expect, however, to voluntarily deliver production into all of these contracts by the end of 2009. Assuming that deliveries occur evenly over this period, the average realizable gold price is expected to be approximately $359 per ounce, based on current contango rates. If we deliver into these contracts in a more accelerated schedule, the realizable gold price could be lower than $359 per ounce. At June 30, 2006, we also had floating spot-price gold sales contracts under which we are committed to deliver 0.7 million ounces of gold over next ten years at spot prices, less an average fixed-price adjustment of $135 per ounce.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

Management has discussed the development and selection of our critical accounting estimates with the Audit Committee of the Board of Directors, and the Audit Committee has reviewed the disclosure relating to such estimates in conjunction with its review of this MD&A. The accounting policies and methods we utilize determine how we report our financial condition and results of operations, and they may require management to make estimates or rely on assumptions about matters that are inherently uncertain. In this MD&A, we have provided an update for any changes in accounting policies and critical

interest rates and on an average lease rate assumption of 0.75%.

The contracts represent about 36% of the 26 million ounces of combined gold reserves at Pascua-Lama and our 60% share of gold reserves at Pueblo Viejo[1]. These contracts do not impact any of the approximately 685 million ounces of silver contained in gold reserves at Pascua-Lama. The contracts retain all the benefits of our MTAs.

Corporate Gold Sales Contracts
The 2.8 million of corporate gold sales contract ounces are historic Barrick normal sales contracts with

[1] Calculated in accordance with National Instrument 43-101 as required by Canadian securities regulatory authorities. For United States reporting purposes, Industry Guide 7 (under the Securities Exchange Act of 1934), as interpreted by the Staff of the SEC, applies different standards in order to classify mineralization as a reserve. Accordingly, for US reporting purposes, Pueblo Viejo is classified as mineralized material.

accounting estimates from our 2005 annual MD&A.

Accounting Policy Changes
FAS 123R, Share-Based Payment (“FAS 123R”)
On January 1, 2006, we adopted FAS 123R, which includes in its scope our stock options, Restricted Share Units ("RSUs") and Deferred Share Units ("DSUs"). Prior to January 1, 2006, we accounted for stock options granted to employees using an intrinsic value method. We recorded compensation cost for stock options based on the excess of the market price of the stock option at the grant date of an award over the exercise price. Historically, the exercise price for stock options equaled

the market price of stock at the grant date, resulting in no compensation cost. FAS 123R requires us to expense the fair value of share based payment awards over the vesting term. We adopted FAS 123R using the modified prospective method and our Financial Statements for periods prior to adoption, including the 2005 comparative Financial Statements, have not been restated. Total stock option expense recorded in the three and six months ended June 30, 2006 was $6 million and $13 million, respectively. Historically, we have recorded compensation expense for RSUs and DSUs based on their fair values, and the adoption of FAS 123R had no significant impact on accounting for RSUs and DSUs.

In second quarter 2006, we assumed the outstanding fully-vested Placer Dome stock options. These stock options are exercisable into an equivalent number of Barrick shares based on the exchange ratio under the acquisition of Placer Dome. The estimated fair value of these stock options of $20 million was recorded as part of the cost of acquisition.

FAS 151, Inventory Costs and FIN 47, Accounting for Conditional AROs
On January 1, 2006, we adopted FASB Interpretation No. 47, Accounting for Conditional Asset Retirement Obligations ("FIN 47") and FASB No. 151, Inventory Costs ("FAS 151"). Under FAS 151, abnormal amounts of idle facility expense, freight, handling costs and wasted materials are recognized as current period charges rather than capitalized to inventory. FAS 151 also requires that the allocation of fixed production overhead to the cost of inventory be based on the normal capacity of production facilities. FAS 151 is applicable prospectively from January 1, 2006 and we have modified our inventory accounting policy consistent with its requirements. Under our modified accounting policy for inventory, production-type costs that are abnormal are excluded from inventory and charged directly

Future Accounting Policy Changes
FASB Interpretation No. 48, Accounting for Uncertainty in Income Taxes-an interpretation of FASB Statement No. 109
In June 2006, the FASB issued FIN No. 48 - Accounting for Uncertainty in Income Taxes, an interpretation of FASB Statement No. 109. The interpretation has been developed because of diversity in practice for accounting for uncertain tax positions. Some entities record tax benefits for uncertain tax positions as they are filed on the income tax return, while others use either gain contingency accounting or a probability threshold.

Under the interpretation, an entity should presume that a taxing authority will examine all tax positions with full knowledge of all relevant information. When evaluating a tax position for recognition and measurement; therefore, consideration of the risk of examination is not appropriate. In applying the provisions of the interpretation, there will be distinct recognition and measurement evaluations. The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates it is more likely than not, based solely on the technical merits, that the position will be sustained on audit, including resolution of related appeals or litigation processes, if any. The second step is to measure the appropriate amount of the benefit to recognize. The amount of benefit to recognize will be measured as the maximum amount which is more likely than not, to be realized. The tax position should be derecognized in the first period when it is no longer more likely than not of being sustained. On subsequent recognition and measurement, the maximum amount which is more likely than not to be recognized at each reporting date will represent the management's best estimate given the information available at the reporting date, even though the outcome of the tax position is not absolute or final. Subsequent recognition, derecognition, and measurement should be based on new information. A liability for interest or

to cost of sales. Interruptions to normal activity levels at a mine could occur for a variety of reasons including seasonal shutdowns for statutory holidays, equipment failures and major maintenance activities, strikes, power supply interruptions and adverse weather conditions. When such interruptions occur we evaluate the impact on the cost of inventory produced in the period, and to the extent the actual cost exceeds the cost based on normal capacity we expense any excess directly to cost of sales. The adoption of FIN 47 and FAS 151 did not have a significant impact on our Financial Statements in the three and six months ended June 30, 2006.

penalties or both will be recognized as deemed to be incurred based on the provisions of the tax law, that is, the period for which the taxing authority will begin assessing the interest or penalties or both. The amount of interest expense recognized will be based on the difference between the amount recognized in accordance with this interpretation and the benefit recognized in the tax return. Under this interpretation, an entity will disclose its policy on the classification of interest and penalties and also disclose the reconciliation of the total amounts of unrecognized tax benefits at the beginning to the end of each period. On transition, the change in net assets due to applying the provisions of the final interpretation will be considered a change in accounting principle with the cumulative effect of the change treated as an

offsetting adjustment to the opening balance of retained earnings in the period of transition. The interpretation is effective by the beginning of the first annual period beginning after December 15, 2006, with early adoption permitted. We are presently evaluating the impact of this interpretation on our financial statements

Critical Accounting Estimates and Judgments

Reserve Estimates Used to Measure Amortization of Property, Plant and Equipment

Impact of Historic Changes in Reserve Estimates on Amortization

(millions ounces/$ millions)	Reserves increase (decrease)[1]	Amortization increase (decrease) Periods ended June 30, 2006	
		Three months	Six months
North America	(1.6)	$ 6	$ 7
Australia Pacific[2]	(0.3)	(1)	(3)
Africa	0.1	(1)	(3)
South America[2]	(1.4)	(2)	(6)
Total	(3.2)	$ 2	$ (5)

[1] Each year we update our reserve estimates as at the end of the year as part of our normal business cycle. Reserve changes presented were calculated as at the end of 2005 and are in millions of contained ounces.

[2] Increase in reserves at certain mines had a greater impact on amortization for the current period than did decreases in reserves at other mine sites within the region.

Purchase Accounting as a Result of a Business Combination

We accounted for the acquisition of Placer Dome as a purchase business combination with Barrick as the acquirer. The cost of acquisition will be allocated to the assets acquired and liabilities assumed based on the estimated fair value at the date of acquisition. The excess of the purchase cost over the net identified tangible and intangible assets will likely represent goodwill that will be allocated to reporting units and subject to an annual impairment test.

adjustment to inventory recorded at acquisition impacts cost of sales. In second quarter 2006, the impact of this fair value adjustment was an increase in cost of sales by $13 million (first quarter 2006: $61 million). At June 30, 2006, the difference between the cost of acquisition and preliminary estimates of the fair value of net identifiable assets and liabilities acquired has been presented as goodwill. Upon completion of the purchase price allocation, the final amount of goodwill will be calculated and allocated to reporting units.

CAUTIONARY STATEMENT ON FORWARD-LOOKING INFORMATION

Certain information contained or incorporated by reference in this Second Quarter Report 2006, including any information as to our future financial or operating performance, constitutes "forward-looking statements". All statements, other than statements of historical fact, are forward-looking statements. The words "believe", "expect", "anticipate", "contemplate", "target", "plan", "intends", "continue", "budget", "estimate", "may", "will", "schedule" and similar expressions identify forward-looking statements. Forward-looking statements are necessarily based upon a number of estimates and assumptions that, while considered reasonable by us, are inherently subject to significant business, economic and competitive uncertainties and contingencies. Known and unknown factors could cause actual results to differ materially from those projected in the forward-looking statements. Such factors include, but are not limited to: fluctuations in the currency markets (such as Canadian and Australian dollars, South African rand and Papua New Guinean kina versus US dollar); fluctuations in the spot and forward price of gold or certain other commodities (such as copper, silver, diesel fuel and electricity); changes in US dollar interest rates or gold lease rates that could impact the mark-to-market value of outstanding derivative instruments and ongoing

Purchase accounting rules require an allocation of the purchase cost to assets and liabilities acquired under the Placer Dome acquisition. In first quarter 2006, a preliminary allocation was made to assets and liabilities acquired, which was updated in second quarter 2006 based on further work completed. This allocation is not yet complete due to inherent complexities in the valuation and revisions may be required later in 2006 that could impact earnings prospectively in future periods. The fair value of work in progress and finished goods inventories acquired was estimated based on expected selling prices less costs to complete, selling costs and a reasonable profit margin. The fair value of inventory was about $120 million higher than historic cost and, as the acquired inventory is sold, the

payments/receipts under interest rate swaps and variable rate debt obligations; risks arising from holding derivative instruments (such as credit risk, market liquidity risk and mark-to-market risk); changes in national and local government legislation, taxation, controls, regulations and political or economic developments in Canada, the United States, Dominican Republic, Australia, Papua New Guinea, Chile, Peru, Argentina, South Africa, Tanzania, Russia or Barbados or other countries in which we do or may carry on business in the future; business opportunities that may be presented to, or pursued by, us; our ability to successfully integrate acquisitions, including our recent acquisition of Placer Dome; operating or technical difficulties in connection with mining or development activities; employee relations; the speculative nature of gold exploration and development, including the risks of

obtaining necessary licenses and permits; diminishing quantities or grades of reserves; adverse changes in our credit rating; and contests over title to properties, particularly title to undeveloped properties. In addition there are risks and hazards associated with the business of gold exploration, development and mining, including environmental hazards, industrial accidents, unusual or unexpected formations, pressures, cave-ins, flooding and gold bullion losses (and the risk of inadequate insurance, or inability to obtain insurance, to cover these risks). Many of these uncertainties and contingencies can affect our actual results and could cause actual results to differ materially from those expressed or implied in any forward-looking statements made by, or on behalf of, us. Readers are cautioned that forward-looking statements are not guarantees of future performance. All of the forward-looking statements made in this Second Quarter Report 2006 are qualified by these cautionary statements. Specific reference is made to Barrick's most recent Form 40-F/Annual Information Form on file with the SEC and Canadian provincial securities regulatory authorities for a discussion of some of the factors underlying forward-looking statements.

We disclaim any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except to the extent required by applicable laws.

NOTES TO UNAUDITED INTERIM CONSOLIDATED FINANCIAL STATEMENTS

Barrick Gold Corporation, Tabular dollar amounts in millions of United States dollars, unless otherwise shown. References to C$, A$, ARS and CLP are to Canadian dollars, Australian dollars, Argentinean pesos and Chilean Pesos respectively.

1> NATURE OF OPERATIONS

Barrick Gold Corporation ("Barrick" or the "Company") engages in the production and sale of gold and copper from underground and open-pit mines, including relate activities such as exploration and mine development. Our operations are mainly located in North America, South America, Africa, Australia Pacific and Russia/Central Asia. Our gold and copper production is sold into the world market.

2> SIGNIFICANT ACCOUNTING POLICIES

A Basis of Preparation

The United States dollar is the principal currency of our operations. These unaudited interim consolidated financial statements have been prepared in United States dollars and under United States generally accepted accounting principles ("US GAAP") for the preparation of interim financial information. Accordingly, they do not include all of the information and disclosures required by US GAAP for annual consolidated financial statements. The accounting policies used in the preparation of the accompanying unaudited interim consolidated financial statements are the same as those described in our audited consolidated financial statements and the notes thereto for the three years ended December 31, 2005, except as described below in note 2C. To ensure comparability of financial information, certain prior-year amounts have been material beyond proven and probable reserves; future costs and expenses to produce proven and probable reserves; future commodity prices and foreign currency exchange rates; the future cost of asset retirement obligations; the amounts of contingencies; preliminary and final estimates for fair value of acquired assets and liabilities and pre-acquisition contingencies; and assumptions used in the accounting for employee stock compensation such as stock price volatility, expected term and forfeiture rates for unvested awards. Using these estimates and assumptions, we make various decisions in preparing the financial statements including:

Ø The treatment of mine development costs as either an asset or an expense;

Ø whether long-lived assets are impaired, and if so, estimates of the fair value of those assets and any corresponding impairment charge;

Ø our ability to realize deferred income tax assets;

Ø the useful lives of long-lived assets and the measurement of amortization;

Ø the fair value of asset retirement obligations;

Ø the likelihood of loss contingencies occurring and the amount of any potential loss;

Ø whether investments are impaired;

Ø the amount of stock based compensation expense, including pro forma stock option expense in 2005; and

Ø the preliminary and final allocations of the purchase price in purchase business combinations.

As the estimation process is inherently uncertain, actual future outcomes could differ from present estimates and assumptions; potentially having material future effects on our financial statements.

reclassified to conform with the current year presentation.

In the opinion of management, all adjustments considered necessary for the fair presentation of results for the periods presented have been reflected in these financial statements. These unaudited interim consolidated financial statements should be read in conjunction with the audited annual consolidated financial statements and the notes thereto for the three years ended December 31, 2005.

The preparation of these financial statements requires us to make estimates and assumptions. The most significant ones are: quantities of proven and probable gold and copper reserves; the value of mineralized

B Consolidation

Through the acquisition of Placer Dome in first quarter 2006 we acquired interests in the Cortez, Turquoise Ridge and Porgera mines through unincorporated joint ventures under which we share joint control of operating, investing and financing decisions with the other joint venture partners. We use the proportionate consolidation method to account for our interests in these unincorporated joint ventures. For further information refer to note 22. We also acquired a 50% interest in the South Deep mine through the Placer Dome acquisition. Under a joint venture agreement we control this joint venture through the ability to exercise a casting vote at joint venture meetings, subject to certain protective rights held by the other joint venture partner. We consolidate 100% of this joint venture and record a

non-controlling interest for the ownership interest held by the other joint venture partner. In second quarter 2006 we finalized a joint venture agreement with Goldcorp for the Pueblo Viejo project. Under the terms of the agreement we control this joint venture, so we consolidate 100% of this project and record a noncontrolling interest for the ownership interest held by the other joint venture partner.

C Accounting Changes

FAS 123R, Accounting for Stock-Based Compensation (FAS 123R)

On January 1, 2006, we adopted FAS 123R "Share Based Payments". Prior to this date we applied FAS 123 and accounted for stock options under the intrinsic value method, recording the compensation cost for stock options as the excess of the market price of the stock at the grant date of an award over the exercise price. Historically, the exercise price of the stock option equaled the market price of the stock at the grant date resulting in no recorded compensation cost. We provided pro-forma disclosure of the effect of expensing the fair value of stock options.

We adopted FAS 123R using the modified prospective method and our financial statements for periods prior to adoption, including the 2005 comparative financial statements, have not been restated. From January 1, 2006 we have recorded compensation expense for all new stock option grants based on the grant date fair value, amortized on a straight-line basis over the vesting period. We also recorded compensation expense for the unvested portion of grants prior to January 1, 2006, based on the grant date fair value calculated for pro-forma disclosure purposes for financial statements of fiscal periods prior to 2006, amortized on a straight-line basis over the remaining vesting period.

Total recorded compensation cost relating to stock options was $6 million for the three months ended June 30, 2006 and $13 million

FAS 151, Inventory Costs

FAS 151 specifies the general principles applicable to the pricing and allocation of certain costs to inventory. FAS 151 is the result of a broader effort by the Financial Accounting Standards Board (FASB) to improve the comparability of cross-border financial reporting by working with the International Accounting Standard Board (IASB) toward development of a single set of high-quality accounting standards. As part of that effort, the FASB and the IASB identified opportunities to improve financial reporting by eliminating certain narrow differences between their existing accounting standards. The accounting for inventory costs, in particular, abnormal amounts of idle facility expense, freight, handling costs, and spoilage, is one such narrow difference that the FASB decided to address by issuing FAS 151. As historically worded in ARB 43, Chapter 4, the term "abnormal" was not defined and its application could lead to unnecessary noncomparability of financial reporting. FAS 151 eliminates that term. Under FAS 151, abnormal amounts of idle facility expense, freight, handling costs and wasted materials are recognized as current period charges rather than capitalized to inventory. FAS 151 also requires that the allocation of fixed production overhead to the cost of inventory be based on the normal capacity of production facilities. FAS 151 is applicable prospectively from January 1, 2006 and we have modified our inventory accounting policy consistent with its requirements. Under our modified accounting policy for inventory, production-type costs that are abnormal are excluded from inventory and charged directly to cost of sales. Interruptions to normal activity levels at a mine could occur for a variety of reasons including seasonal shutdowns for statutory holidays, equipment failures and major maintenance activities, strikes, power supply interruptions and adverse weather conditions. When such interruptions occur we evaluate the impact on the cost of inventory produced in the period, and to the extent the actual cost exceeds the

for the six months ended June 30, 2006 and is presented as a component of cost of sales, corporate administration and other expense consistent with the classification of other elements of compensation for those individuals who have been granted stock options. Compensation cost relating to stock options had an impact of $0.01 on earnings per share for the three months ended June 30 and $0.02 for the six months ended June 30, 2006. The adoption of FAS 123R and application to accounting for our Restricted Share Units (RSUs) and Deferred Share Units (DSUs) did not have any significant impact on our financial statements. See note 19 for further information.

cost based on normal capacity we expense any excess directly to cost of sales. The adoption of FAS 151 did not have any significant effect on our financial statements for the three months and six months ended June 30, 2006.

D Accounting Developments

FASB Interpretation No. 48 - Accounting for Uncertainty in Tax Positions

In June 2006, the FASB issued FIN No. 48 - Accounting for Uncertainty in Income Taxes, an interpretation of FASB Statement No. 109. The interpretation has been developed because of diversity in practice for accounting for uncertain tax positions. Some entities record tax benefits for uncertain tax positions as they are filed on

the income tax return, while others use either gain contingency accounting or a probability threshold.

Under the interpretation, an entity should presume that a taxing authority will examine all tax positions with full knowledge of all relevant information. Therefore, when evaluating a tax position for recognition and measurement, consideration of the risk of examination is not appropriate. In applying the provisions of the interpretation, there will be distinct recognition and measurement evaluations. The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates it is more likely than not, based solely on the technical merits, that the position will be sustained on audit, including resolution of related appeals or litigation processes, if any. The second step is to measure the appropriate amount of the benefit to recognize. The amount of benefit to recognize will be measured as the maximum amount which is more likely than not, to be realized. The tax position should be derecognized in the first period when it is no longer more likely than not of being sustained. On subsequent recognition and measurement the maximum amount which is more likely than not to be recognized at each reporting date will represent management's best estimate given the information available at the reporting date, even though the outcome of the tax position is not absolute or final. Subsequent recognition, derecognition, and measurement should be based on new information. A liability for interest or penalties or both will be recognized as deemed to be incurred based on the provisions of the tax law, that is, the period for which the taxing authority will begin assessing the interest or penalties or both. The amount of interest expense recognized will be based on the difference between the amount recognized in accordance with this interpretation and the benefit recognized in the tax return. Under this interpretation, an entity will disclose its policy on the classification of interest and users of financial statements generally have agreed. Others, however, have expressed concerns about the ability to apply the fair value measurement objective in GAAP, more recently in response to the FASB Proposal, Principles-Based approach to US Standard Setting. The FASB believes that, in part, those concerns result because there is limited guidance for applying the fair value objective in GAAP. The guidance that currently exists has evolved piecemeal over time. That guidance is dispersed among the many pronouncements that require fair measurements, and differences in that guidance have created inconsistencies that have added to the complexity in GAAP. In June 2003, the FASB added a separate fair value measurement project to its agenda to address those concerns. In June 2004, the FASB issued an Exposure Draft of a proposed Statement, Fair Value Measurements. The comment period ended on September 7, 2004.

In the latest Exposure Draft, the FASB clarified that:

l A fair value measurement assumes an orderly transaction to sell or otherwise dispose of an asset or transfer a liability in the principal market for the asset or liability or, in the absence of a principal market, the most advantageous market for the asset or liability.
l The inputs referred to within the fair value hierarchy are market inputs that reflect the assumptions that market participants in the principal (most advantageous) market would use in pricing an asset or liability and differ with respect to the extent to which they are observable. The fair value hierarchy gives the highest priority to observable market inputs and the lowest priority to unobservable market inputs.
l A fair value measurement must include all of the assumptions that market participants in the principal (most advantageous) market would consider in pricing the asset or liability, including assumptions about risk if the measurement is based on unobservable market inputs.

penalties and also disclose the reconciliation of the total amounts of unrecognized tax benefits at the beginning to the end of each period. On transition, the change in net assets due to applying the provisions of the final interpretation will be considered a change in accounting principle with the cumulative effect of the change treated as an offsetting adjustment to the opening balance of retained earnings in the period of transition. The interpretation is effective by the beginning of the first annual period beginning after December 15, 2006, with early adoption permitted. We are presently evaluating the impact of this interpretation on our financial statements.

Exposure Draft, Fair Value Measurements (FVM)

In many recent accounting pronouncements, the FASB has concluded that fair value information is relevant and

l In many cases, a transaction price will represent the fair value of an asset or liability at initial recognition, but not presumptively.

If adopted, the FVM statement will be effective for Financial Statements issues for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. After the final FVM statements is issued, we intend to complete our assessment of the impact on our financial statements.

Exposure Draft, Post-Retirement Benefit Obligations, including Pensions.
On March 31, 2006, the Financial Accounting Standards Board ("FASB") issue an exposure draft, Accounting for Post-Retirement Benefit Obligations, including Pensions. This guidance includes a requirement for a company to fully recognize the over funded or under funded status of its benefit plans on the balance sheet. Based on the exposure draft the new guidance will be effective for our December 31, 2006 financial statements. We are in the process of evaluating the potential impact of this exposure draft on our financial statements.

E Changes in Estimates
Gold Mineral Reserves
Effective December 31, 2005, we updated our estimates of proven and probable gold mineral reserves at each mineral property. Following the update of these estimates, we prospectively revised calculations of amortization of property, plant and equipment. The effect of the change in reserve estimates on amortization of property, plant and equipment for the three months ended June 30, 2006, was an increase in this expense by $2 million, and for the six months ended June 30, 2006, a decrease in this expense of $5 million.

3 BUSINESS COMBINATIONS

A Acquisition of Placer Dome Inc. ("Placer Dome")

Placer Dome Offer and Acceptance
In first quarter 2006 we acquired 100% of the outstanding common shares of Placer Dome. Placer Dome was one of the world's largest gold mining companies, and produced 3.6 million ounces of gold and 359 million pounds of copper in 2005. It had 12 mining January 20, 2006, with the results of operations of Placer Dome consolidated from January 20, 2006 onwards. The purchase cost was $10 billion and was funded through a combination of common shares issued, the drawdown of a $1 billion credit facility, and cash resources.

Value of 322.8 million Barrick common shares issued at $27.14 per share	$ 8,761
Value of 2.5 million fully vested stock options	20
Cash	1,239
Transaction costs	30
	$ 10,050

The measurement of the $27.14 common share component of the purchase consideration represents the average closing price on the New York Stock Exchange for the two days prior to and two days after the public announcement of our final offer for Placer Dome.

In accordance with the purchase method of accounting, the purchase cost will be allocated to the underlying assets acquired and liabilities assumed based upon their estimated fair values at the date of acquisition. We intend to determine the final estimated fair values based on independent appraisals, discounted cash flows, quoted market prices, and estimates made by management. We expect that any excess of purchase cost over the net identifiable tangible and intangible assets acquired will represent goodwill that will be allocated to reporting units.

The following table sets forth a preliminary allocation of the purchase cost to assets and liabilities acquired, based on preliminary estimates of fair value. Our work on final valuation estimates for individual acquired assets and liabilities is furthest advanced in respect of inventories, derivatives and long-term debt. Valuations of property, plant and equipment, intangible assets, contingencies, deferred income tax assets/liabilities, and asset retirement obligations are less advanced due to the inherent complexity associated with the valuations. The purchase price allocation is preliminary and subject to adjustment over the course of 2006 on completion of the valuation process and analysis of resulting tax effects. In second quarter 2006 we adjusted the measurement of deferred tax assets and liabilities due to updates to valuation allowances and recognition of deferred tax liabilities at acquisition. These balances are subject to further adjustments over the course of 2006.

operations based in North America, South America, Africa and Australia/Papua New Guinea, as well as four projects that are in various states of exploration/development. Its most significant mines were Cortez in the United States, Zaldívar in Chile, Porgera in Papua New Guinea, North Mara in Tanzania and South Deep in South Africa. The most significant projects are Cortez Hills and Donlin Creek in the United States, and Pueblo Viejo in the Dominican Republic. We believe that the business combination between ourselves and Placer Dome is a unique opportunity to create a Canadian-based leader in the global gold mining industry, and strengthens our position, including in respect of reserves, production, growth opportunities, and balance sheet strength.

Accounting for the Placer Dome Acquisition

The Placer Dome acquisition has been accounted for as a purchase business combination, with Barrick as the accounting acquirer. We acquired Placer Dome on

Preliminary Purchase Price Allocation

Cash	$ 1,102
Inventories	435
Other current assets	255
Property, plant and equipment	3,484
Assets of discontinued operations	1,744
Other assets	303
Goodwill	7,670
Total assets	14,993
Current liabilities	669
Liabilities of discontinued operations	107
Derivative instrument liabilities	1,729
Long-term debt	1,251
Other long-term obligations	725
Total liabilities	4,481
Non-controlling interest	462
Net assets acquired	$ 10,050

At acquisition we recorded restructuring liabilities totaling $48 million that primarily relate to employee severance at Placer Dome offices that are being closed. In second quarter 2006 amounts totaling $19 million were paid, with $9 million outstanding at June 30, 2006. We expect to pay all the outstanding amounts by second quarter 2007.

Goodwill

We allocate goodwill arising from business combinations to reporting units acquired by preparing estimates of the fair value of the entire reporting unit and comparing this amount to the fair value of assets and liabilities (including intangibles) in the reporting unit. The difference represents the amount of goodwill allocated to each reporting unit. Upon finalization of the purchase price allocation we will calculate the amount of goodwill arising on the Placer Dome acquisition, identify the reporting units and allocate goodwill to those reporting units.

We will test goodwill for impairment annually in the fourth quarter of our fiscal year. This impairment assessment will involve estimating the fair value of each reporting unit that includes goodwill. We will compare this fair value to the total carrying amount of each reporting unit (including goodwill). If the fair value exceeds this carrying amount, then we will estimate the fair values of all identifiable assets and liabilities in the reporting unit, and compare this net fair value of assets less liabilities to the estimated fair value of the entire reporting unit. The difference will represent the fair value of goodwill, and if necessary, we will reduce the carrying amount of goodwill to this fair value.

Discontinued Operations

In second quarter 2006, Goldcorp Inc. ("Goldcorp") acquired from us all of Placer Dome's Canadian properties and operations (other than Placer Dome's office in Vancouver), including all mining, reclamation and exploration properties, Placer Dome's interest in the La Coipa mine in Chile, 40% of Placer Dome's interest in the Pueblo Viejo project in the Dominican Republic, certain related assets and, our share in Agua de la Falda S.A., which included our interest in the Jeronimo project (collectively, the "Assets of Discontinued Operations"). Goldcorp is responsible for all liabilities relating solely to the Assets of Discontinued Operations, including employment commitments and environmental, closure and reclamation liabilities (collectively, the "Liabilities Discontinued Operations").

The sales proceeds for the Assets of Discontinued Operations were $1,641 million. The aggregate net amount of assets and liabilities of discontinued operations were recorded in the preliminary purchase price allocation at this amount. The results of these operations were consolidated until closing, and are presented under "discontinued operations" in the income statement and cash flow statement. Interest has been allocated to the results from discontinued operations. No gain or loss arose on closing.

Basis of Presentation
This pro forma consolidated financial statement information has been prepared by us for illustrative purposes only to show the effect of the acquisition of 100% of Placer Dome by Barrick in the results for the three month period ended June 30, 2005 and the six month period ended June 20, 2005 had the acquisition taken place on January 1, 2005. Pro forma adjustments for the assumed effect of the sale of certain discontinued operations on the results of operations of Barrick have been reflected in this pro forma consolidated financial statement information. Pro forma information for the six months ended June 30, 2006 has not been presented because the inclusion of results for the period from January 1, 2006 to January 20, 2006 would not significantly impact the actual results for the period as reported.

The pro forma consolidated financial statement information is not intended to be indicative of the results that would actually have occurred, or the results expected in future periods, had the events reflected herein occurred on the dates indicated. Actual amounts recorded upon finalization of the purchase price allocation and sale of discontinued operations will likely differ from those recorded in this pro forma consolidated financial statement information. Any potential synergies that may be realized and integration costs that may be incurred have been excluded from the pro forma financial statement information, including Placer Dome transaction costs and amounts payable under change of control agreements to certain members of management that are estimated at a combined total of $93 million. The information prepared is only a summary.

Pro Forma Assumptions and Adjustments

The pro forma consolidated statement of income for the three months ended June 30, 2005 and six months ended June 30, 2005 has been prepared from the statements of income for each of Barrick and Placer Dome for the period after giving pro forma effect to the acquisition of Placer Dome by Barrick and subsequent sale of discontinued operations as if both transactions had occurred on January 1, 2005.

The pro forma consolidated statement of income reflects the following adjustments.

(a) An increase in interest income of $2 million for the three months ended June 30, 2005 and of $3 million for the six months ended June 30, 2005 to reflect interest income earned on the cash proceeds generated by the assumed exercise of Placer Dome stock options.

(b) An increase in interest expense of $11 million for the three months ended June 30, 2005 and of $21 million for the six months ended June 30, 2005 to reflect the interest costs (net of amounts that would have been capitalized to Barrick development projects) relating to the cash component of the Offer that has been financed through temporary credit facilities. A decrease in interest expense of $11 million for the three months ended June 30, 2005 and of $21 million for the six months ended June 30, 2005 to reflect the assumed avoidance of interest on the temporary financing for the cash component of the Offer assuming the repayment of such

Pro Forma Earnings Per Share

B Acquisition of Mineral Interest in Pakistan

On February 14, 2006, we entered into an agreement with Antofagasta PLC ("Antofagasta") to acquire 50% of Tethyan Copper Company's ("Tethyan") Reko Diq project and associated mineral interests in Pakistan. As part of the arrangement, we have agreed to reimburse Antofagasta approximately $115 million in cash representing 50% of the cost of acquisition, including proceeds to be paid to terminate claw-back rights to material interest in certain Tethyan's mineral interests, currently held by BHP Billiton. In June 2006, Antofagasta completed the acquisition of all the outstanding shares of Tethyan, as a result of which we are in the process of finalizing arrangements to complete the acquisition of our 50% interest in Reko Diq.

C Acquisition of NovaGold Resources Inc.

On July 24, 2006 we announced our intention to make an all cash offer of $14.50 per share for all the outstanding shares of NovaGold Resources Inc. ("NovaGold"). The acquisition of NovaGold would enable us to consolidate our interest in the Donlin Creek project in Alaska, USA, and acquire a 100% interest in the Galore Creek project in British Columbia, Canada, and a 100% interest in the Rock Creek open-pit gold deposit, in Nome, Alaska, which is targeted to begin production by late 2006 or early 2007. NovaGold's other

financing from the receipt of cash proceeds from the sale of discontinued operations.
(c) A credit to tax expense of $4 million for the three months ended June 30, 2005 and of $8 million for the six months ended June 30, 2005 to reflect the tax effect of the pro forma purchase adjustments in (a) and (b).
(d) Adjustments to de-recognize the revenues and expenses for the three months ended June 30, 2005 and the six months ended June 30, 2005 relating to the discontinued operations.
(e) Adjustments to de-recognize income tax expense for the discontinued operations for the three months ended June 30, 2005 and the six months ended June 30, 2005 and to record the tax effect of other pro forma adjustments relating to the sale of discontinued operations.

assets at May 31, 2006 included cash of $184 million; and investments with a market value of about $66 million. Based on the outstanding common shares of NovaGold at July 24, 2006, the cost of acquiring 100% of NovaGold would be $1.53 billion on a fully diluted basis.

Also on July 24, 2006 we announced that we had reached an agreement with Pioneer Metals Corporation ("Pioneer"), whereby it will support Barrick's offer to acquire all its outstanding common shares for cash consideration of C$1.00 per share or approximately C$64.7 million on a fully diluted basis.

Pioneer has a portfolio of exploration properties and interests, including the Grace property which is adjacent to NovaGold's Galore Creek project.

4 > SEGMENT INFORMATION

In 2004, we adopted a regional business unit approach to the management of our mining operations. Our operations were organized geographically in the following regions: North America, South America, Australia/Africa, and Russia/Central Asia. We also maintained a separate exploration group to manage exploration projects on a global basis. Notwithstanding this management structure we reported information on a mine by mine basis to the chief operating decision maker, and therefore concluded that our operating segments represented individual mines and development projects. In 2006, upon completion of the Placer Dome acquisition and integration of the acquired Placer Dome mining operations, we created a separate Africa business unit distinct from Australia and added the Porgera Mine in Papua New Guinea to the Australia business unit, at the same time renaming it Australia Pacific. We revised the format of information provided to the chief operating decision maker to be consistent with our regional business unit structure, distinguishing between gold and copper mining operations. In first quarter 2006, we revised our operating segment disclosure to be consistent with the internal management structure and reporting format changes, with restatement of comparative information to conform to the current period presentation.

5 > REVENUE AND SALES CONTRACTS

	Three month period ended June 30		Six month period ended June 30	
	2006	2005	**2006**	2005
Gold bullion sales				
Spot market sales	**$ 1,168**	$ 409	**$ 2,123**	$ 861
Gold sales contracts	**-**	38	**72**	38
	1,168	447	**2,195**	899
Concentrate sales	**45**	16	**89**	48
	$ 1,213	$ 463	**$ 2,284**	$ 947
Copper Sales				
Copper cathode sales	**$ 289**	$ -	**$ 434**	$ -
Concentrate sales	**54**	-	**92**	-
	$ 343	$ -	**$ 526**	$ -

In first quarter 2006 we acquired two copper mines through the Placer Dome acquisition. We sell copper under sales contracts entered into with customers. Under the terms of these copper sales contracts, copper prices are set on a specified future date based upon market commodity prices plus in some cases, price adjustments. Revenue is recognized on delivery when title and risk of loss pass to the customer, and collectability is reasonably assured. Revenue is measured using forward market prices on the expected date that final selling prices will be fixed. Variations occur between the price recorded on the date of revenue recognition and the actual final price under the terms of the contracts due to changes in market copper prices, which result in the existence of an embedded derivative in the accounts receivable. This embedded derivative is recorded at fair value each period until final settlement occurs, with changes in fair value classified as a component of revenue.

At June 30, 2006, we had fixed-price gold sales contracts allocated to our development projects, principally to Pascua-Lama and Pueblo Viejo for 6.5 million ounces and 3.0 million ounces respectively of future gold production. The allocation of these contracts will help reduce gold price risk at

As at June 30, 2006 ($ millions)	Mark-to-Market Value
Project Gold Sales Contracts	(3,148)
Corporate Gold Sales Contracts	(1,086)
Floating Price Gold Sales Contracts	(96)
	(4,330)

[1] At spot gold price of $614 per ounce.

Floating spot price sales contracts were previously fixed-price forward sales contracts for which, in accordance with the terms of our master trading agreements, we have elected to receive floating spot gold and silver prices, adjusted by the difference between the spot price and the contract price at the time of such election. Floating prices were elected for these contracts so that we could economically regain spot gold price leverage under the terms of delivery into these contracts. Floating price mechanisms were elected for these contracts at a time when the then current market price was higher than the fixed-price in the contract, resulting in a mark-to-market on these contracts (at June 30, 2006) of negative $96 million, which equates to an average reduction to the future spot sales price of approximately $135 per ounce, when we deliver gold at spot prices against these contracts. At June 30, 2006, we held gold lease rate swaps, under which we receive a fixed gold lease rate, and pay a floating gold lease rate, on a notional 1.0 million ounces of gold spread from 2005 to 2013. The swaps are associated with fixed-price gold sales contracts with expected delivery dates beyond 2006. Lease rate swaps are classified as non-hedge derivatives (note 15B).

Pascua-Lama and Pueblo Viejo and may help secure financing for construction. In addition to the gold sales contracts allocated to Pascua-Lama and Pueblo Viejo, we had 2.8 million ounces of fixed-price corporate gold sales contracts. We also had a further 0.7 million ounces of floating-price gold sales contracts. The mark-to-market on these contracts (at June 30, 2006) was as follows:

In addition to our fixed-price gold sales contracts, at June 30, 2006, we had 224 million pounds of copper put options outstanding with a net fair value of $5 million (note 15B).

6 > COST OF SALES

	Three month period ended June 30				Six month period ended June 30			
	Gold		Copper		Gold		Copper	
	2006	2005	**2006**	2005	**2006**	2005	**2006**	2005
Cost of goods sold[1]	**$ 581**	$ 289	**$ 87**	$ -	**$1,158**	$ 573	**$ 194**	$ -
By-product revenues[2]	**(38)**	(37)	**(1)**	-	**(72)**	(66)	**(1)**	-
Royalty expense[3]	**37**	13	**-**	-	**70**	26	**2**	-
Mining taxes	**8**	1	**-**	-	**15**	4	**-**	-
	$ 588	$ 266	**$ 86**	$ -	**$1,171**	$ 537	**$ 195**	$ -

1 Cost of goods sold includes accretion expense at producing mines of $7 million (2005 - $3 million) in the three months ended June 30, 2006 and $13 million (2005 - $6 million) in the six months ended June 30, 2006. The cost of inventory sold in the period reflects all components capitalized to inventory, except that, for presentation purposes, the component of inventory cost relating to amortization of property, plant and equipment is classified in the income statement under "amortization". Some companies present this amount under "cost of sales". The amount presented in amortization rather than cost of sales was $164 million in the three months ended June 30, 2006 (2005 - $89 million), and $325 million (2005 - $178 million) in the six months ended June 30, 2006.

2 We use silver sales contracts to sell a portion of silver produced as a by-product. Silver sales contracts have similar delivery terms and pricing mechanisms as gold sales contracts. At June 30, 2006, we had fixed-price commitments to deliver 15.5 million ounces of silver at an average price of $6.35 per ounce, and floating spot price sale contracts for 5.8 million ounces, over periods of up to 10 years. The mark-to-market on the silver sales contracts (at June 30, 2006) was negative $74 million.

3 Through the acquisition of Placer Dome we acquired various royalty obligations at the Placer Dome mines. All production at Cortez is subject to a 1.5% gross smelter return ("GSR") royalty, with a further GSR royalty over the Pipeline/South Pipeline deposit (graduating from 0.4% to 5.0% based on the price of gold) and a net value royalty of 5% over a portion of the Pipeline/South Pipeline deposit. Production at the Porgera mine is subject to a 2% net smelter royalty payable to the National Government Department of Mining, which then distributes it to the Enga Provincial government, the Porgera District Authority, and local landowners. Production in Queensland and Western Australia is subject to a royalty ranging from 2.5% to 2.7% of gold revenues.

7 > OTHER INCOME (EXPENSE)

	Three month period ended June 30		Six month period ended June 30	
	2006	2005	**2006**	2005
Non-hedge derivative gains (note 15B)	**$ 25**	$ 3	**$ 4**	$ 9
Gains on sale of assets	**5**	-	**6**	1
Gain on Kabanga transaction	**-**	15	**-**	15

Pension and other post-retirement benefit expense	**(1)**	(1)	**(2)**	(2)
Other income (expense)	**(1)**	-	**4**	1
	$ 11	$ 5	**$ (12)**	$ 10

[1] Included costs at development projects and closed mines and changes in the expected costs of AROs at closed mines.

In second quarter 2006, a loaded skip and 6.7 kilometers of rope fell 1.6 kilometers down the South Deep mine's Twin Shaft complex during routine maintenance, causing extensive damage but no injuries. Repair costs for assets that were damaged are being expensed as incurred. We are insured for property damage and a portion of business interruption losses, and we have initiated the claims process in connection with this event. Any insurance recoveries will be recorded as other income at the time that realization of the insurance claim is deemed probable and the amount is reliably estimable.

In second quarter 2006, we completed the sale of our interest in the Cerro Casale project to a third party, consistent with the terms of an agreement that had been entered into by Placer Dome prior to the date we acquired Placer Dome. No gain or loss was recorded on closing.

Pension and Other Post-Retirement Benefit Expense[1]

	Three month period ended June 30		Six month period ended June 30	
	2006	2005	**2006**	2005
Expected return on plan assets	**$ (5)**	$ (3)	**$ (11)**	$ (6)

Interest cost on benefit obligation	**5**	3	**12**	6
Actuarial losses	**1**	1	**1**	2
	$ 3	$ 1	**$ 5**	$ 2

[1] For the three months ended June 30, 2006, $1 million of pension expense that relates to active employees at producing mines is included in cost of sales, and $1 million is included in Corporate administration (2005-$nil). For the six months ended June 30, 2006, $2 million of pension expense is included in cost of sales and $1 million is included in Corporate administration (2005-$nil).

8 > INCOME TAX EXPENSE

	Three month period ended June 30		Six month period ended June 30	
	2006	2005	**2006**	2005
Current	**$ 108**	$ 8	**$ 195**	$ 19
Deferred	**10**	(1)	**(2)**	5
	$ 118	$ 7	**$ 193**	$ 24
Reduction of deferred tax liability	**-**	-	**(31)**	-
Tax rate changes	**13**	-	**13**	-
	$ 131	$ 7	**$ 175**	$ 24
Effective income tax rate, excluding tax rate changes and reduction of deferred tax liability	**20%**	13%	**22%**	18%

The primary reasons why our actual effective income tax rate differs from the 38% Canadian statutory rate are due to certain allowances and special deductions unique to extractive industries, and also because we operate in multiple tax jurisdictions that have different tax rates than the Canadian federal and provincial rates. We have performed a preliminary measurement of deferred tax assets and liabilities, as well as a preliminary assessment of tax contingencies and valuation allowances for the acquired Placer Dome operations. Upon finalization of the purchase price allocation we will complete the determination of tax assets and liabilities acquired, which could differ from the taxpayers who have made the functional currency election, and in respect of debt that existed at the time the election was made, the ID provided clarification that unrealized foreign exchange gains that currently exist on intercompany debt will not crystallize upon repayment of the debt. The effect of the ID was recorded as a $31 million reduction of deferred tax liabilities.

In second quarter 2006, a new federal rate change was enacted in Canada that lowered the applicable tax rate. The impact of this tax rate change was to reduce net deferred tax assets in Canada by $35 million that was recorded as a component of deferred income

amounts recorded at June 30, 2006.

In first quarter 2006, an interpretative decision (ID) was issued by the Australia Tax Office that clarified the tax treatment of currency gains and losses on foreign denominated liabilities. Under certain conditions, for

tax expense. Also in second quarter 2006, on change of tax status of a Canadian subsidiary we recorded a deferred income tax credit of $22 million, to reflect the impact on the measurement of deferred income tax assets and liabilities.

1 Under various benefit plans for certain former Homestake executives, a portfolio of marketable fixed-income and equity securities are held in a rabbi trust that is used to fund obligations under the plans.
2 All securities have been in a continuous unrealized loss position for less than three months.
3 Includes $150 million of restricted cash relating to the demand financing facility.
4 Bonds with maturity greater than 90 days.

In second quarter 2006, production began at our Cowal mine and we began amortizing mine property, plant and equipment.

Commitments
In addition to entering into various operational commitments in the normal course of business, we had commitments of approximately $60 million at June 30, 2006 for construction activities at our development projects. We also have a commitment of $115 million under an acquisition agreement with Antofagasta to acquire an interest in the Reko Diq project in Pakistan (see note 313). We also have commitments under our offers to acquire NovaGold and Pioneer as described in note 3C.

Donlin Creek Mining Venture Agreement
Through the acquisition of Placer Dome, we acquired a 30% participating interest in the Donlin Creek Joint Venture. The Donlin Creek project is a large refractory gold deposit in Southwestern Alaska, under lease from two Alaska aboriginal corporations until 2015 and so long thereafter as mining operations are carried out at the Donlin Creek property. The Donlin Creek property is

being explored and developed under a Mining Venture Agreement between NovaGold and wholly owned subsidiaries of Barrick entered into in November 2002. Under the terms of such agreement, Barrick currently holds a 30% interest in the project with the right to increase that interest to 70% by satisfying the following conditions on or before November 12, 2007: (1) funding of $32 million of exploration and development expenditures on the project; (2) delivering a feasibility study to NovaGold; and (3) obtaining the approval of Barrick's Board of Directors to construct a mine on the property. At the end of March 2006, Barrick satisfied the funding condition. Barrick is currently taking the steps necessary to complete the required feasibility study.

[1] At varying interest rates ranging from 6.37% to 7.75%, with an aggregate principal amount of $700 million. Maturities as follows: $100 million in 2007; $100 million in 2015; $200 million in 2033; $300 million in 2035.

[2] The Series B Preferred securities have a principal amount of $77 million and mature in 2045. The Securities are redeemable, in whole or in part: on or after December 17, 2006 at the principal amount plus accrued and unpaid interest to the date of redemption (the "Maturity amount'); or before December 17, 2006, by paying the "Make Whole Amount", which is the greater of the Maturity Amount and the present value of scheduled payments to December 17, 2006 plus the present value of the Maturity Amount at December 17, 2006, discounted to the redemption date at the treasury rate plus 0.5%, plus accrued and unpaid interest. The Maturity Amount, or Make-Whole Amount, will be paid in cash unless we elect to pay by delivering our common shares to the Trustee of the Securities, who will sell such shares and pay the cash proceeds to the holders. Based on the closing market share price on June 30, 2006 an election to settle the principal amount in common shares would result in the issuance of about 3.7 million common shares.

[3] The notes have a principal amount of $96.0 million, with interest rates ranging from 6.64% to 8.05%. The notes mature at various times between 2009 and 2026.
[4] The convertible debentures mature in 2023 and have a principal amount of $230 million. At any time prior to October 15, 2023, upon the occurrence of various conditions, holders of the Securities will have the right to convert each $1,000 principal amount into about 39.52 common shares, representing a conversion price of about $25.31 per common share. The conditions include, but are not limited to: If the closing price of our common shares exceeds 120% of the "Conversion Price" in effect for at least 20 trading days in the 30 consecutive trading days ended on the last trading day of the immediately preceding quarter; If for five consecutive trading days, during which each day the trading price per $1,000 principal amount of the Securities was less than 98% of the product of the closing price of the common shares and the then current "Conversion Rate" on the conversion date; and if the Securities have been called for redemption but only such Securities may be converted. We may redeem the Securities at any time on or after October 20, 2010 and prior to maturity, in whole or in part, at a prescribed redemption price that varies depending upon the date of redemption from 100.825% to 100% of the principal amount, plus accrued and unpaid interest. Holders of the Securities can require the repurchase of the Securities for 100% of their face value on October 15, 2013 and October 15, 2018. For accounting purposes the convertible debentures are classified as a "conventional convertible debenture" and the conversion feature has not been bifurcated from the host contract.
[5] In the second quarter, we repaid $510 million of our existing credit facility. In early August 2006, we increased our $1 billion credit facility to $1.5 billion and $1.01 billion remains undrawn. The facility, which is unsecured, matures in 2011.
[6] We have a demand financing facility that permits borrowings of up to $150 million. The facility requires cash to be placed on deposit with the lender in an amount equal to draw downs. The net effective interest rate is 0.4% per annum. At June 30, 2006, $150 million, had been drawn on the facility and an equal amount had been placed on deposit that is included in restricted cash on our balance sheet (see note 12).
[7] At June 30, 2006, we had unused bank lines of credit of $765 million with an international consortium of banks. In the second quarter, $337 million of this facility was repaid. Of the primary facility of $850 million, $85 million remains utilized to support letters of credit granted for bonding and reclamation purposes. The credit facility is fully committed until 2010. The undrawn facility is available for general corporate purposes. The majority of these facilities are at long-term interest rates determined with reference to market LIBOR rates. The bank lines of credit require the borrower to maintain a consolidated tangible net worth (the aggregate amount of assets after deducting therefrom all current liabilities, goodwill and other like intangibles) of $1.5 billion.

Interest cost	**67**		**31**		**$ 125**		$ 59	

[1] The effective rate includes the stated interest rate under the debt agreement, amortization of debt issue costs and the fair value premium and the impact of interest rate contracts designated in a hedging relationship with long-term debt.
[2] Interest paid on the First Credit Facility drawdown of the $1 billion, to provide funding to pay for the cash component of the Placer Dome acquisition, was reimbursed to US from Goldcorp in May.
[3] We have a demand financing facility that permits borrowings of up to $150 million. The facility requires cash to be placed on deposit with the lender in an amount equal to draw downs. The net effective interest rate is 0.4% per annum.

B Derivative Instruments ("Derivatives")

Placer Dome Acquisition

Through the acquisition of Placer Dome in first quarter 2006 we acquired the following derivative positions:

	Notional amount	Fair value at Jan. 20, 2006[1]
Gold sold forward contracts (millions of ounces)	7.0	$ (1,544)
Gold bought forward contracts (millions of ounces)	0.3	14
Gold options (millions of ounces)	1.0	(188)
Silver contracts (millions of ounces)	6.5	(11)
A$ currency contracts (A$ millions)	133	22

[1] Fair values on January 20, 2006 are preliminary and gains or losses recorded are subject to adjustment on finalization of valuations.

Gold sold forward contracts were designated as cash flow hedges at the date of acquisition. The Placer gold cash flow hedge position has since been eliminated, with 3.0 million ounces having been eliminated in second quarter 2006. Approximately 6.2 million ounces of the acquired Placer Dome positions received hedge accounting treatment for the period from the date of acquisition to the date they were eliminated, and under which they had a designated date and price against specific future gold sales.

Summary of Derivatives at June 30, 2006[1]

	Notional Amount by Term to Maturity			Accounting Classification by Notional Amount			Fair Value
	Within 1 year	2 to 5 years	Total	Cash flow hedge	Fair value hedge	Non-Hedge

Natural gas bought forward contracts (millions of Btu)	1	-	1	-	-	1	(1)

[1] Excludes gold sales contracts and gold lease rate swaps (see note 5).
[2] Non-hedge currency contracts with a notional amount of $40 million were economically closed out by entering into offsetting positions albeit with differing counterparties.

US Dollar Interest Rate Contracts

Fair value hedges
Receive-fixed swaps totaling $500 million have been designated against the 71/2% debentures as a hedge of the variability in the fair value of the debentures caused by changes in Libor.

Non-hedge contracts

Currency Contracts
Cash flow hedges
Currency contracts under which we sell US dollars and buy foreign currencies totaling C$632 million, A$2,317 million, and ARS 18 million have been designated against forecasted local currency denominated expenditures as a hedge of the variability of the US dollar amount of those expenditures caused by changes in currency exchange rates.

We use gold lease rate swaps to achieve a more economically optimal term structure for gold lease rates implicit in fixed-price gold sales contracts (see note 5). The valuation of gold lease rate swaps is impacted by market US dollar interest rates. Our non-hedge pay-fixed swap position largely mitigates the impact of changes in US dollar interest rates on the valuation of gold lease rate swaps.

We have $100 million of receive-fixed swaps, which economically hedge the variability of forecasted interest receipts on our cash balances caused by changes in Libor. We have concluded these contracts no longer meet the "highly effective" criterion in FAS 133 due to differences in the frequency of cash receipts.

Commodity Contracts

Cash flow hedges

Commodity contracts totaling 2,047 thousand barrels of crude oil and 9 million gallons of propane have been designated against forecasted purchases of these commodities for expected consumption at our mining operations.

Gold sold forward contracts acquired through the Placer Dome acquisition were designated in first quarter 2006 against forecasted gold sales as a hedge of the variability in market prices on future sales. Hedged items were identified as the first stated quantity of ounces of forecasted sales in a future month. These hedge contracts have been terminated or de-designated and

the effective portion of changes in fair value of the gold contracts has been recorded in OCI until the forecasted gold sale impacts earnings.

Copper put options totaling 145 million pounds have been designated against forecasted copper sales as a hedge of the variability in market prices on future sales. Hedged items are identified as the first stated quantity of pounds of forecasted sales in a future month. Prospective hedge effectiveness is assessed using a dollar offset method. The prospective assessment involves comparing the effect of theoretical shifts in forward copper prices on the fair value of both the actual hedging derivative and a hypothetical derivative. The retrospective assessment involves comparing the effect of historic changes in copper prices each period on the fair value of both the actual and hypothetical derivative. The effective portion of changes in fair value of the copper contracts is recorded in OCI until the forecasted copper sale impacts earnings.

Non-hedge contracts

Non-hedge fuel contracts are used to mitigate the risk of oil price changes on consumption at the Lagunas Norte mine. On completion of regression analysis, we concluded that the contracts do not meet the "highly effective" criterion in FAS 133 due to currency and basis differences between contract prices and the prices charged to the mines by oil suppliers. Despite not qualifying as an accounting hedge, the contracts protect the Company to a significant extent from the effects of oil price changes.

Non-hedge copper contracts are used to mitigate the risk of copper price changes on copper sales at the Osborne and Zaldívar mines. We concluded that these contracts do not meet the "highly effective" criterion in FAS 133 because of differences in the underlyings in the copper price exposure and the derivative instrument.

17 > DEFERRED INCOME TAXES

On acquisition of Placer Dome, we recorded deferred income tax assets and liabilities based on the preliminary purchase price allocation. The amounts of recorded deferred income tax assets, liabilities, and associated valuation allowance are preliminary. Our assessment of the amounts recorded is not yet complete and will also be affected by any adjustments to the recorded amounts of other assets and liabilities.

In second quarter 2006 we updated our preliminary measurement of deferred tax assets and liabilities due to reflect a more advanced assessment of valuation allowances and the measurement of deferred tax liabilities at acquisition. These balances are subject to further adjustments over the course of 2006. Amounts of recorded deferred income tax assets and liabilities at the date of acquisition, based on this preliminary allocation, comprise:

Loss and Tax Carry Forwards Acquired Through the Placer Dome Acquisition:

Country	Category		Expiry
Australia	Operating losses	$ 454	n/a
Canada	Non-capital losses	365	2006-2016

	Alternative minimum tax credits	22	n/a
Other	Operating losses	124	2006-2014

18 > CAPITAL STOCK

A Common Shares

In first quarter 2006, we issued 322.8 million shares in connection with the acquisition of Placer Dome. In the three months ended June 30, 2006, we declared and paid dividends in US dollars totaling $0.11 per share (three months ended June 30, 2005: $0.11 per share).

B Exchangeable Shares

In connection with a 1998 acquisition, Barrick Gold Inc. ("BGI") issued 11.1 million BGI exchangeable shares, which are each exchangeable for 0.53 of a Barrick common share at any time at the option of the holder, and have essentially the same voting, dividend (payable in Canadian dollars), and other rights as 0.53 of a Barrick common share. BGI is a subsidiary that holds our interest in the Hemlo and Eskay Creek mines.

At June 30, 2006,1.4 million BGI exchangeable shares were outstanding, which are equivalent to 0.7 million Barrick common shares (2005 - 0.7 million common shares). While there are exchangeable shares outstanding, we are required to present summary consolidated financial information relating to BGI.

Summarized Financial Information for BGI

	Three month period ended June 30		Six month period ended June 30	
	2006	2005	**2006**	2005
Total revenues and other income	**$ 97**	$ 46	**$ 144**	$ 98

Dome acquisition (see note 3A). The Canadian dollar share options have a weighted average exercise price of C$28.78, an aggregate intrinsic value of C$68.6 million and an average remaining contractual term of 4.6 years. The US dollar share options have a weighted average exercise price of US$23.50, an aggregate intrinsic value of US$43.0 million and an average remaining contractual term of 5.9 years.

At June 30, 2006, 10.6 million Canadian dollar share options and 1.9 million US dollar share options were fully vested. The Canadian dollar options have an average exercise price of C$29.16, an aggregate intrinsic value of C$57.8 million and an average remaining contractual term of 3.9 years. The US dollar share options have an average exercise price of US$20.87, an aggregate intrinsic value of US$16.5 million and an average remaining contractual term of 6.1 years.

For the three months ended June 30, 2006, 0.9 million Canadian dollar share options and 0.4 million US dollar share options were exercised. The Canadian options exercised had an intrinsic value of C$5.6 million. The US dollar share options exercised had an intrinsic value of US$1.6 million for the three months ended June 30, 2006, Canadian dollar share options with a fair market value of C$1.4 million and US share options with a fair market value of US$0.6 million vested.

For the six months ended June 30, 2006,1.8 million Canadian dollar share options and 0.7 million US dollar share options were exercised. The Canadian options exercised had an intrinsic value of C$12.6 million and the US share options exercised had an intrinsic value

equity		
Other current liabilities	**11**	25
Intercompany notes payable	**406**	390
Other long-term liabilities	**43**	43
Deferred income tax liabilities	**4**	12
Deficit	**(337)**	(263)
	$ 127	$ 207

19> STOCK-BASED COMPENSATION

At June 30, 2006, 13.7 million Canadian dollar share options and 7.0 million US dollar share options were outstanding, including 1.9 million share options assumed in the Placer

of US$7.2 million. For the six months ended June 30, 2006, Canadian dollar share options with a fair market value of C$4.8 million and US share options with value of US$1.5 million vested.

For the three and six months ended June 30, 2005, we utilized the intrinsic value method of accounting for stock options and no compensation expense was recorded. If compensation expense had been determined in accordance with the fair value provisions of SFAS No. 123 pro-forma net income and net income per share would have been as follows:

Stock Option Expense

($ millions, except per share amounts in dollars)	Three month period ended June 30	Six month period ended June 30
	2005	2005
Pro forma effects		
Net income, as reported	$ 47	$ 113

21 > LITIGATION AND CLAIMS

Wagner Complaint

On June 23, 2003, a complaint was filed against Barrick and several of its current or former officers in the U.S. District Court for the Southern District of New York. The complaint is on behalf of Barrick shareholders who purchased Barrick shares between February 14, 2002 and September 26, 2002. It alleges that Barrick and the individual defendants violated U.S. securities laws by making false and misleading statements concerning Barrick's projected operating results and earnings in 2002. The complaint seeks an unspecified amount of damages. Other parties on behalf of the same proposed class of Barrick shareholders filed several other complaints, making the same basic allegations against the same defendants. In September 2003, the cases were consolidated into a single action in the Southern District of New York. The Plaintiffs filed a Consolidated and/or Amended Complaint on November 5, 2003.

On January 14, 2004, Barrick filed a motion to dismiss the complaint. On September 29, 2004, the Court issued an order granting in part and denying in

part Barrick's motion to dismiss the action. The Court granted the plaintiffs leave to file a Second Amended Complaint, which was filed on October 20, 2004. The Plaintiffs filed a Third Amended Complaint on January 6, 2005. On May 23, 2005, Barrick filed a motion to dismiss part of the Third Amended Complaint. On January 31, 2006, the Court issued an order granting in part and denying in part Barrick's motion to dismiss. On March 10, 2006, Barrick moved for reconsideration of a portion of the Court's January 31, 2006 Order. On April 3, 2006, plaintiffs moved for reconsideration of a portion of the Court's January 31, 2006 Order. We intend to defend the action vigorously. No amounts have been accrued for any potential loss under this complaint.

Wilcox Complaint
On September 8, 2004, two of our U.S. subsidiaries, Homestake Mining Company of California ("Homestake California") and Homestake Mining Company ("Homestake") were served with a First Amended Complaint by persons alleging to be current or former residents of a rural area near the former Grants Uranium Mill. The Complaint, which was filed in the U.S. District Court for the District of New Mexico, named Homestake and Homestake California, along with an unspecified number of unidentified defendants, as defendants. The plaintiffs allege that they have suffered a variety of physical, emotional and financial injuries as a result of exposure to radioactive and other hazardous substances. The Complaint seeks an unspecified amount of damages. On November 25, 2005, the Court issued an order granting in part and denying in part a motion to dismiss the claim. The Court granted the motion and dismissed plaintiffs' claims based on strict and absolute liability and ruled that plaintiffs' state law claims are pre-empted by the Price-Anderson Act. Plaintiffs filed a Third Amended Complaint on April 10, 2006, which increased the number of plaintiffs from 26 to 28 and omitted the claims previously dismissed by the Court, but otherwise did not contingencies and we expect that the preliminary assessments at June 30 2006 will be finalized later in 2006. Consequently, it is possible that our final assessment of these matters, including the required amounts of recorded liabilities and related disclosures may differ from the preliminary positions.

Golden Sunlight Mine
Placer Dome's subsidiary, Golden Sunlight Mines, Inc. is presently a co-defendant with the Montana Department of Environmental Quality ("DEQ") in a lawsuit filed in the Montana District Court by five environmental groups against the Record of Decision that was issued by the DEQ on June 29, 1998. The lawsuit alleges that the permit approving the pit expansion violates certain Montana regulations and the Montana Constitution because it did not include certain reclamation requirements, primarily the partial backfilling of the open pit, the cost of which has been estimated at approximately $55 million. The matter remains pending before the courts in Montana. No accruals have been made for the potential cost of the partial back-fill option.

Marcopper Mine Complaint
Placer Dome and Marcopper Mining Corporation ("Marcopper") are named as defendants (the "Defendants") in two complaints detailed below (the "Complaints") filed in the Regional Trial Court (the "Court"), Fourth Judicial Region, Boac, Marinduque, Philippines respecting the alleged damages arising from the mining operations of the Marcopper mine. The Marcopper mine is located on the island province of Marinduque, 165 kilometers southeast of Manila in the Philippines. Since the commissioning of the Marcopper mine in 1969, the mine has been owned and operated by Marcopper. The Marcopper mine ceased mining operations in 1996. Placer Dome indirectly owned a minority shareholding in Marcopper until it divested all of its interests in Marcopper in 1997.

materially alter the claims asserted. An Initial Scheduling Order has been issued by the Court. We intend to defend the action vigorously. No amounts have been accrued for any potential loss under this complaint.

Cowal Project

Opponents of Barrick's Cowal project continue to pursue various claims, legal proceedings and complaints against the project and the Company's compliance with its permits and licenses. Barrick has and will continue to vigorously defend such actions. No amounts have been accrued for any potential loss under this complaint.

Placer Dome Litigation and Claims

Through the acquisition of Placer Dome we inherited certain pre-existing litigation and claims that are described in this note. We are presently assessing these pre-acquisition

In April 2001, a complaint was filed in the Court (the "Mogpog Complaint") by Rita Natal and 60 other individuals (the "Mogpog Plaintiffs") against the Defendants. The claim made against the Defendants is for recovery of damages in the total amount of P41,193,267 (approximately US$750,000) arising from alleged tortious acts and omissions by the Defendants that contributed to the siltation and flooding of the Mogpog River in Marinduque, Philippines. The Mogpog Plaintiffs also seek an order for the closure and removal of the Marcopper Mine dumps and an order compelling the complete rehabilitation and restoration of the Mogpog River to its natural state. In July 2004, the Court dismissed the case on its own motion on grounds that the Mogpog Plaintiffs had not complied with the

Court's prior orders with respect to service of the Mogpog Complaint and had not diligently prosecuted the case. In August 2004, the Plaintiffs filed a motion for reconsideration of the dismissal order. By order issued November 22, 2004, the Court granted the motion for reconsideration reinstating the claims against Marcopper only and dismissing the motion against Placer Dome. Subject to appeal, the case stands dismissed against Placer Dome. No appeal has been commenced by the Mogpog Plaintiffs. To date, the Court has not affected service of the Mogpog Complaint on Placer Dome. Based on evaluations of the Mogpog Complaint and the applicable law, management believes that Placer Dome should not be liable for damages or held responsible for other claims.

In July 2004, a complaint was filed in the Court (the "Calancan Bay Complaint") framed as a proposed class action against the Defendants for alleged total damages of P49.192 billion (approximately US$900 million) relating to the deposit of tailings from the Marcopper Mine into Calancan Bay (located off the northern part of Marinduque). The class of plaintiffs (the "Calancan Bay Plaintiffs") is fishermen who are residents of barangays (communities) that surround Calancan Bay. The Calancan Bay Plaintiffs also claim to be suing on behalf of future generations of unborn Calancan Bay residents. Among other matters, the Calancan Bay Complaint alleges that the Defendants' decision to deposit mine tailing into Calancan Bay over a 16 year period has resulted in serious health problems and a general loss of livelihood. To date, the Court has not affected service of the Calancan Bay Complaint on Placer Dome. Management believes based on the applicable law, that the case is not suitable for determination as a class action, that the damages alleged are significantly overstated and that, in any event, Placer Dome should not be liable for such damages. If the Calancan Bay Complaint proceeds, the company intends to vigorously defend against all claims made. No amounts have been accrued for any potential loss under either the compensation for the costs of restoring the environment, an order directing Placer Dome to undertake and complete "the remediation, environmental cleanup, and balancing of the ecology of the affected areas," and payment of the costs of environmental monitoring. The Complaint addresses the discharge of mine tailings into Calancan Bay, the 1993 Maguila-guila dam breach, the 1996 Boac river tailings spill, and alleged past and continuing damage from acid rock drainage. The Complaint asserts that Placer Dome is responsible for alleged environmental degradation with consequent economic damages and impacts to the environment in the vicinity of the Marcopper mine that was owned and operated by Marcopper Mining Corporation ("Marcopper"). Placer Dome indirectly owned a minority shareholding of 39.9% in Marcopper until the divestiture of its shareholding in 1997.

At the time of the amalgamation of Placer Dome and Barrick Gold Corporation, a variety of motions were pending before the District Court, including motions to dismiss the action for lack of personal jurisdiction and for *forum non conveniens* (improper choice of forum). However, on June 29, 2006, the Province filed **a** Motion to join Barrick Gold Corporation as an additional named Defendant and for leave to file a Third Amended Complaint. The Company has until August 16, 2006 to respond to these new motions from the Province. We will challenge the claims of the Province on various grounds and otherwise vigorously defend the action. No amounts have been accrued for any potential loss under the complaint in the preliminary purchase price allocation.

Lawyers Environmental Action Team ("LEAT") Complaint

On July 29th, 2003, LEAT filed a complaint (the "Complaint") with the Tanzanian Commission for Human Rights and Good Governance ("the Commission") in its own capacity as well as allegedly on behalf of some 1,260 former small-scale miners, peasant farmers and land owners

Mogpog Complaint or the Calancan Bay Complaint in the preliminary purchase price allocation.

Marinduque Complaint
Placer Dome has been named the sole defendant in a Complaint filed on October 4, 2005, by the Provincial Government of Marinduque, an island province of the Philippines ("Province"), with the District Court in Clark County, Nevada. The action was removed to the Nevada Federal District Court on motion of Placer Dome. The Province seeks "to recover damages for injuries to the natural, ecological and wildlife resources within its territory", but "does not seek to recover damages for individual injuries sustained by its citizens either to their persons or their property". In addition to damages for injury to natural resources, the Province seeks

(collectively, the "Complainants") against Placer Dome and a number of high-ranking Tanzanian government officials and former officials (collectively, the "Respondents"). The Complaint is founded on alleged human and constitutional rights violations by the Respondents arising from the allegedly forced eviction of the Complainants from the North Mara mine site property (the "Property").

Several types of relief are being sought by the Complainants from the Commission, including a request to convene a public hearing in order to obtain fair and reasonable compensation of approximately $51 million (primarily relating to alleged property damages of the

Complainants as a result of their eviction from the Property), and an order requiring the Tanzanian Minister of Energy and Minerals to suspend or cancel any mineral rights granted to Placer Dome and to "afresh" the Agreement between Placer Dome and the Tanzanian Government concerning the payment of royalties, taxes and other charges (with a view to increasing such amounts to be paid). The Commission has convened a hearing on certain preliminary issues respecting the Complaint. Management believes, on balance, that the Complaint will not be successful and, in particular, that it will not adversely impact Placer Dome's title to its mining concessions. No amounts have been accrued for any potential loss under the complaint in the preliminary purchase price allocation.

Porgera Complaint

In early 2006, a summons was served on, among others, certain of the participants in the Porgera mine joint venture, including Placer Dome (PNG) Limited (which holds a 50% interest in, and is manager of, the joint venture), and various governmental entities in a lawsuit (the "Complaint") brought in the courts of Papua

New Guinea by a number of individuals. The Complaint, which was filed ostensibly as a class action, alleges that the Porgera mine joint venture has been improperly discharging wastes and other contaminants into the Porgera River and adjacent areas, causing damage to human health and the environment. The damages sought were unspecified.
On May 3, 2006, at a hearing on the defendant's motion to strike the Complaint, the Court granted the plaintiff's lease to withdraw the proceedings, ordering that the plaintiffs' would not be permitted to recommence proceedings until they had remedied certain defects in the Complaint and had satisfied the Court's order to pay the defendant's costs.

22 > UNINCORPORATED JOINT VENTURES

Our major interests in proportionately consolidated unincorporated joint ventures are a 50% interest in the Kalgoorlie Mine in Australia; a 50% interest in the Round Mountain Mine in the United States; a 50% interest in the Hemlo Mine in Canada; and a 33% interest in the Marigold Mine in the United States. In first quarter 2006 we also acquired interests in certain unincorporated joint ventures through the acquisition of Placer Dome, including: a 60% interest in the Cortez Mine in the United States; a 75% interest in the Porgera Mine in Papua New Guinea; and a 75% interest in the Turquoise Ridge mine in the United States.

ADDITIONAL INFORMATION

Investors and security holders are advised to read the tender offer statement by Barrick Gold Corporation related to the proposed tender offer for the outstanding common shares of NovaGold Resources Inc. when it becomes available, because it will contain important information. Investors and security holders may obtain a free copy of the tender offer statement when it becomes available and other documents filed by Barrick Gold Corporation with the SEC at the SEC's website at www.sec.gov. The tender offer statement may also be obtained for free when it becomes available from Barrick Gold Corporation on the website or by directing a request to Barrick Gold Corporation's investor relations department.

CAUTIONARY STATEMENT ON FORWARD-LOOKING INFORMATION

Certain information included in this press release, including any information as to our future financial or operating performance and other statements that express management's expectations or estimates of future performance, constitute "forward-looking statements." The words "expect", "will", “intend”, “estimate” and similar expressions identify forward-looking statements. Forward-looking statements are necessarily based upon a number of estimates and assumptions that, while considered reasonable by management, are inherently subject to significant business, economic and competitive uncertainties and contingencies. The Company cautions the reader that such forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause the actual financial results, performance or achievements of Barrick to be materially different from the Company's estimated future results, performance or achievements expressed or implied by those forward-looking statements and the forward-looking statements are not guarantees of future

performance. These risks, uncertainties and other factors include, but are not limited to: changes in the worldwide price of gold or certain other commodities (such as copper, silver, fuel and electricity) and currencies; changes in U.S. dollar interest rates or gold lease rates; risks arising from holding derivative instruments; ability to successfully integrate acquired assets; legislative, political or economic developments in the jurisdictions in which the Company carries on business; operating or technical difficulties in connection with mining or development activities; employee relations; the speculative nature of gold exploration and development, including the risks of diminishing quantities or grades of reserves, adverse changes in our credit rating, contests over title to properties, particularly title to undeveloped properties; and the risks involved in the exploration, development and mining business. These factors are discussed in greater detail in the Company's most recent Form 40-F/Annual Information Form on file with the US Securities and Exchange Commission and Canadian provincial securities regulatory authorities.

The Company disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required by applicable law.
